Creating Delightful Experiences

The process Explained

Double Diamond reinterpreted

Two overlapping diamond shapes, one slightly offset to the right and upwards from the other, creating a layered effect. They are a darker shade of orange than the background.

Creating Delightful Experiences

User centred design is my bread and butter and I'm really fascinated by the human mind. I find quite interesting experimenting new ways to convey messages and information in the most appealing way for the recipients. In doing so, I create new forms of dialogues to make the experience the most engaging for the user.

I worked in many different types of environment in several countries and this taught me how to adapt and stick to my true north at the same time.

I love to design delightful user experiences.

Solving complex problems is my speciality and in doing so I get my inspiration from the use of systems thinking and human-centered design.

I create new forms of dialogues to create the most engaging experience for users

I have experience of leading clients in all types of industry and multidisciplinary teams through the design thinking process. I've been involved in all parts of the design

process: from the proposal writing to the execution of the plan, from designing user research, to generating concepts, prototyping and testing

The Process Explained

In the US and in Europe, I worked in agencies that advocate Co-Creation: a process proven to be beneficial to clients and their customers, by fully embracing the User Centred Design approach.

In the past few years, I have had the opportunity to expand a particular strand of Co-Creation: one that brings clients into the journey of really owning their next digital success.

Ultimately, clients own the outcome of the design process and we, the designers, are here as a helping hand through every step of the journey.

As UX Lead, I took the opportunity to expand the concept of Co-Creation, defining the four phases that a Client needs to go through to really own the project: **Kick-Off, Discover and Define, Develop and Deliver**, and finally **Cultivate**.

When it comes to Digital Design it's not about costs, it's about investments.

Helping Clients seeding a design centric approach in their organisations, will let companies gain a more design-oriented mindset and will give Clients effective tools to make the best out of their digital assets.

They will leapfrog the competitors that didn't invest on design thinking and become the leaders in their domain.

That's why there are no costs when implementing design thinking in a digital project: the price is only one of many factors to determine the value of the investment.

Useful Links

[+ AFTER A YEAR OF UX DESIGN IN LONDON](#)

The **Kick-Off Phase** is key and needs to cover three core areas:

- **Exploring the brief**, the initial definition of the problem, and the desired outcome.
- **Defining roles** and ownership among the team members.
Particularly, it is fundamental to identify the Decision Maker on the Client side that will be involved in each phase as Project Owner.
- **Setting business desires and goals** against budget and resources in the most efficient way.

During the **Discover and Define** phase, the Agency helps the Client to break down the initial problem definition and to identify specific areas with the most appealing design opportunities. To do so, I usually suggest to do a **wide research** to assess technological capabilities, stakeholder expectations and users needs. Client and Agency discuss the findings and agree on a set of needs, priorities and metrics to be met by the new design.

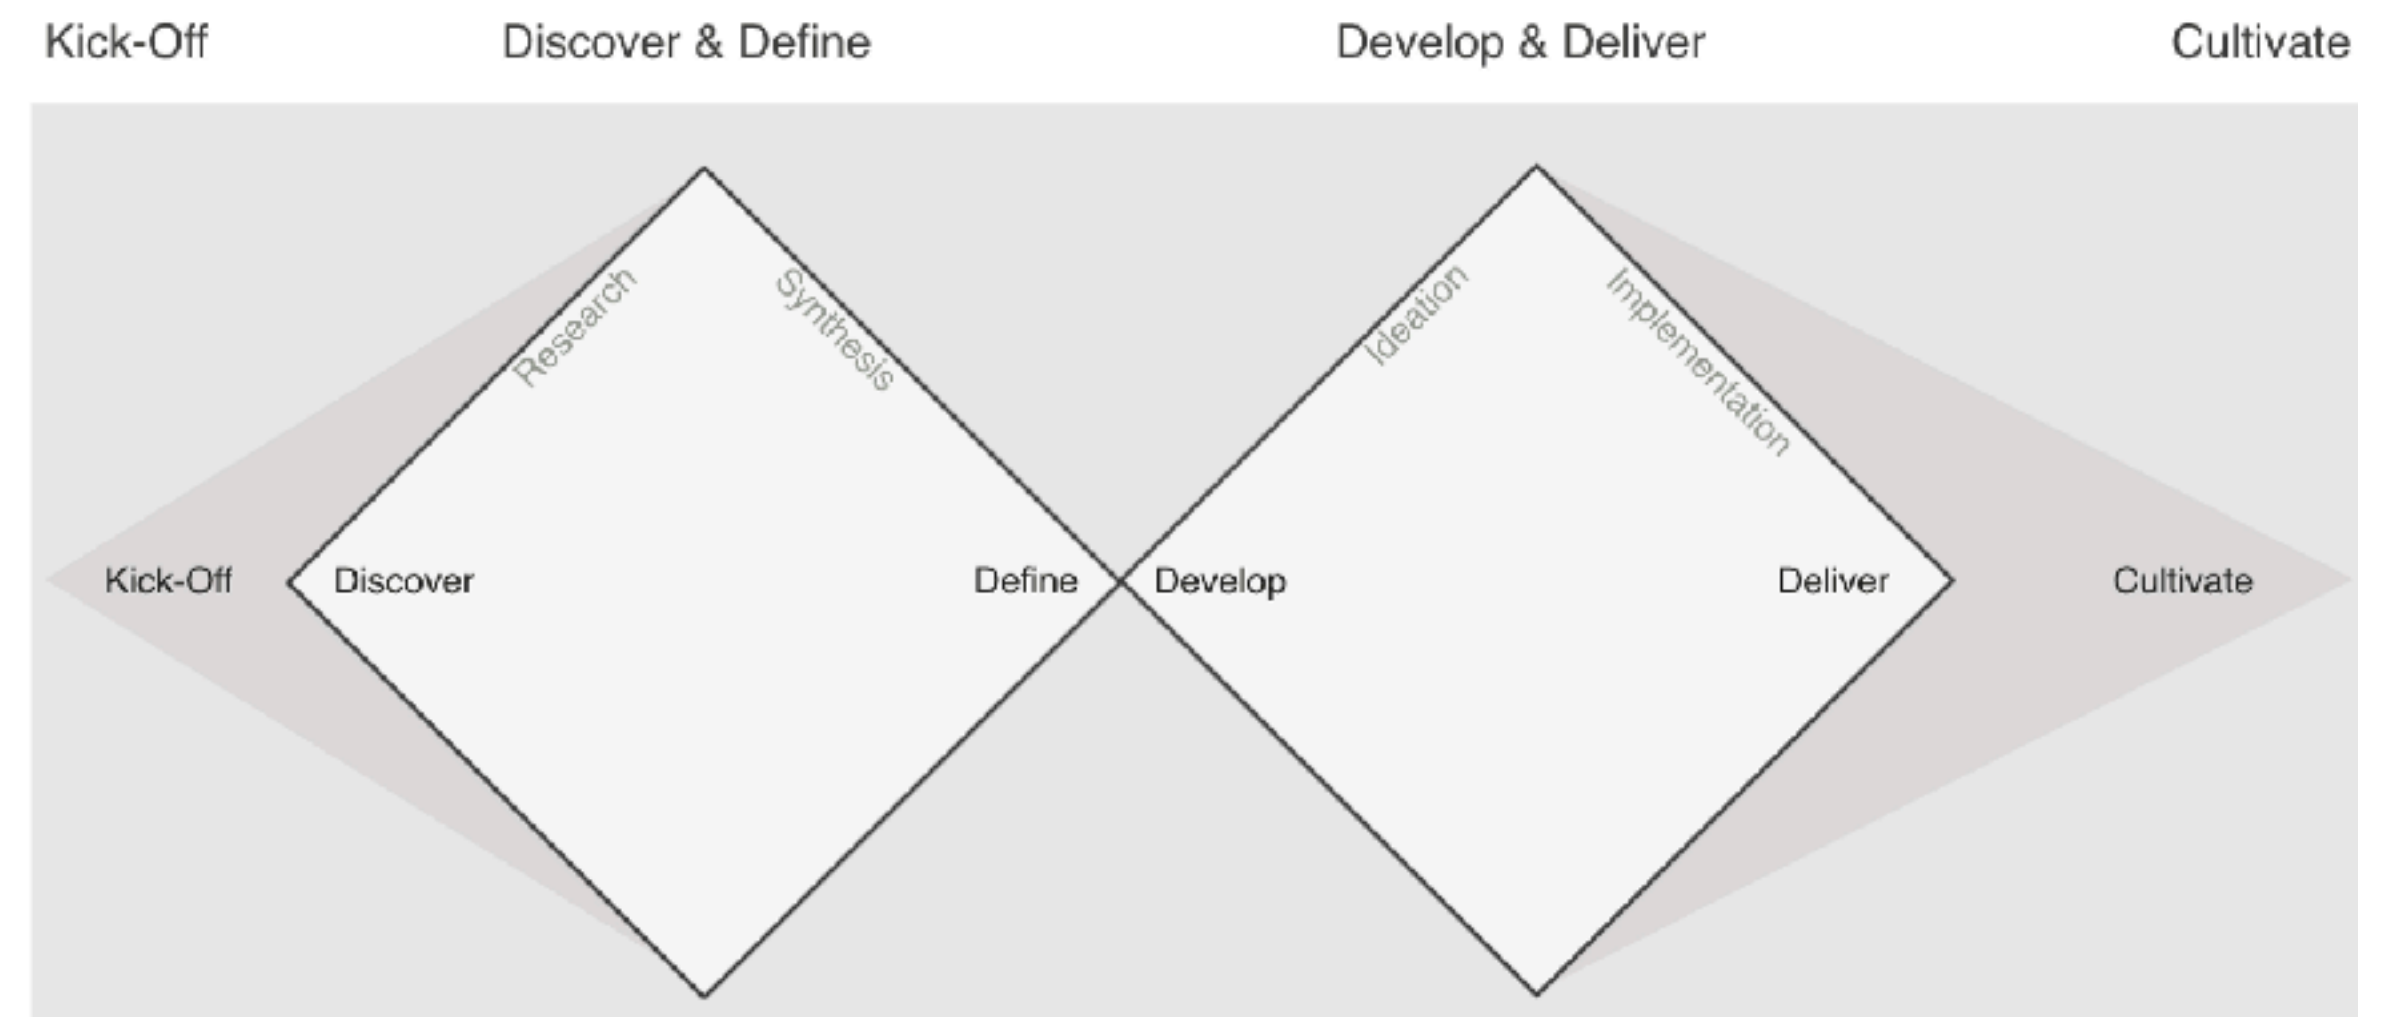

The most suitable design strategy for the Client is now defined and the **Develop and Deliver Phase** can start.

In my experience, two-week sprint cycles accommodate well design and develop activities, covering from Sprint Planning to Client Review.

The Client Decision Maker is an essential part of the team and this facilitates the approval process that speeds up with the Sprint.

In the **Cultivate Phase**, Agency and Client monitor the new design performances and improve it with small reiterations.

The Client now has all the tools and the knowledge to be able to spot new opportunities and involve the Agency anytime it's needed.

Double Diamond reinterpreted

Shaklee Connect

Finding the right balance

A complex application for iOS and Android

Fluid at San Francisco

After some experience freelancing and designing in UX agencies in the Italian capital, I moved to California with my brand new husband. It was summer 2013.

I worked in all sorts of environments, from small start-ups to large organisations, but my preference still turned to agencies. In particular, I really liked working at Fluid where I had the opportunity to put my hands on complex projects for important clients like Brita and Shaklee.

Shaklee Connect: the project

Kick Off

The Client: Shaklee, a multilayer company.

They wanted an application for iOS and Android that supported their members in becoming successful business leaders.

The most interesting challenges were to balance business objectives with users goals and to help the users to digest a massive amount of complex information in the most efficient way.

Discover and Define

When I joined the project, most of the research was already done.

I dived into the research and the insights already collected and worked with my manager on the best strategy for the app.

I refined personas and user journey to identify design opportunities and the best solutions to address business and users needs.

Develop and Deliver

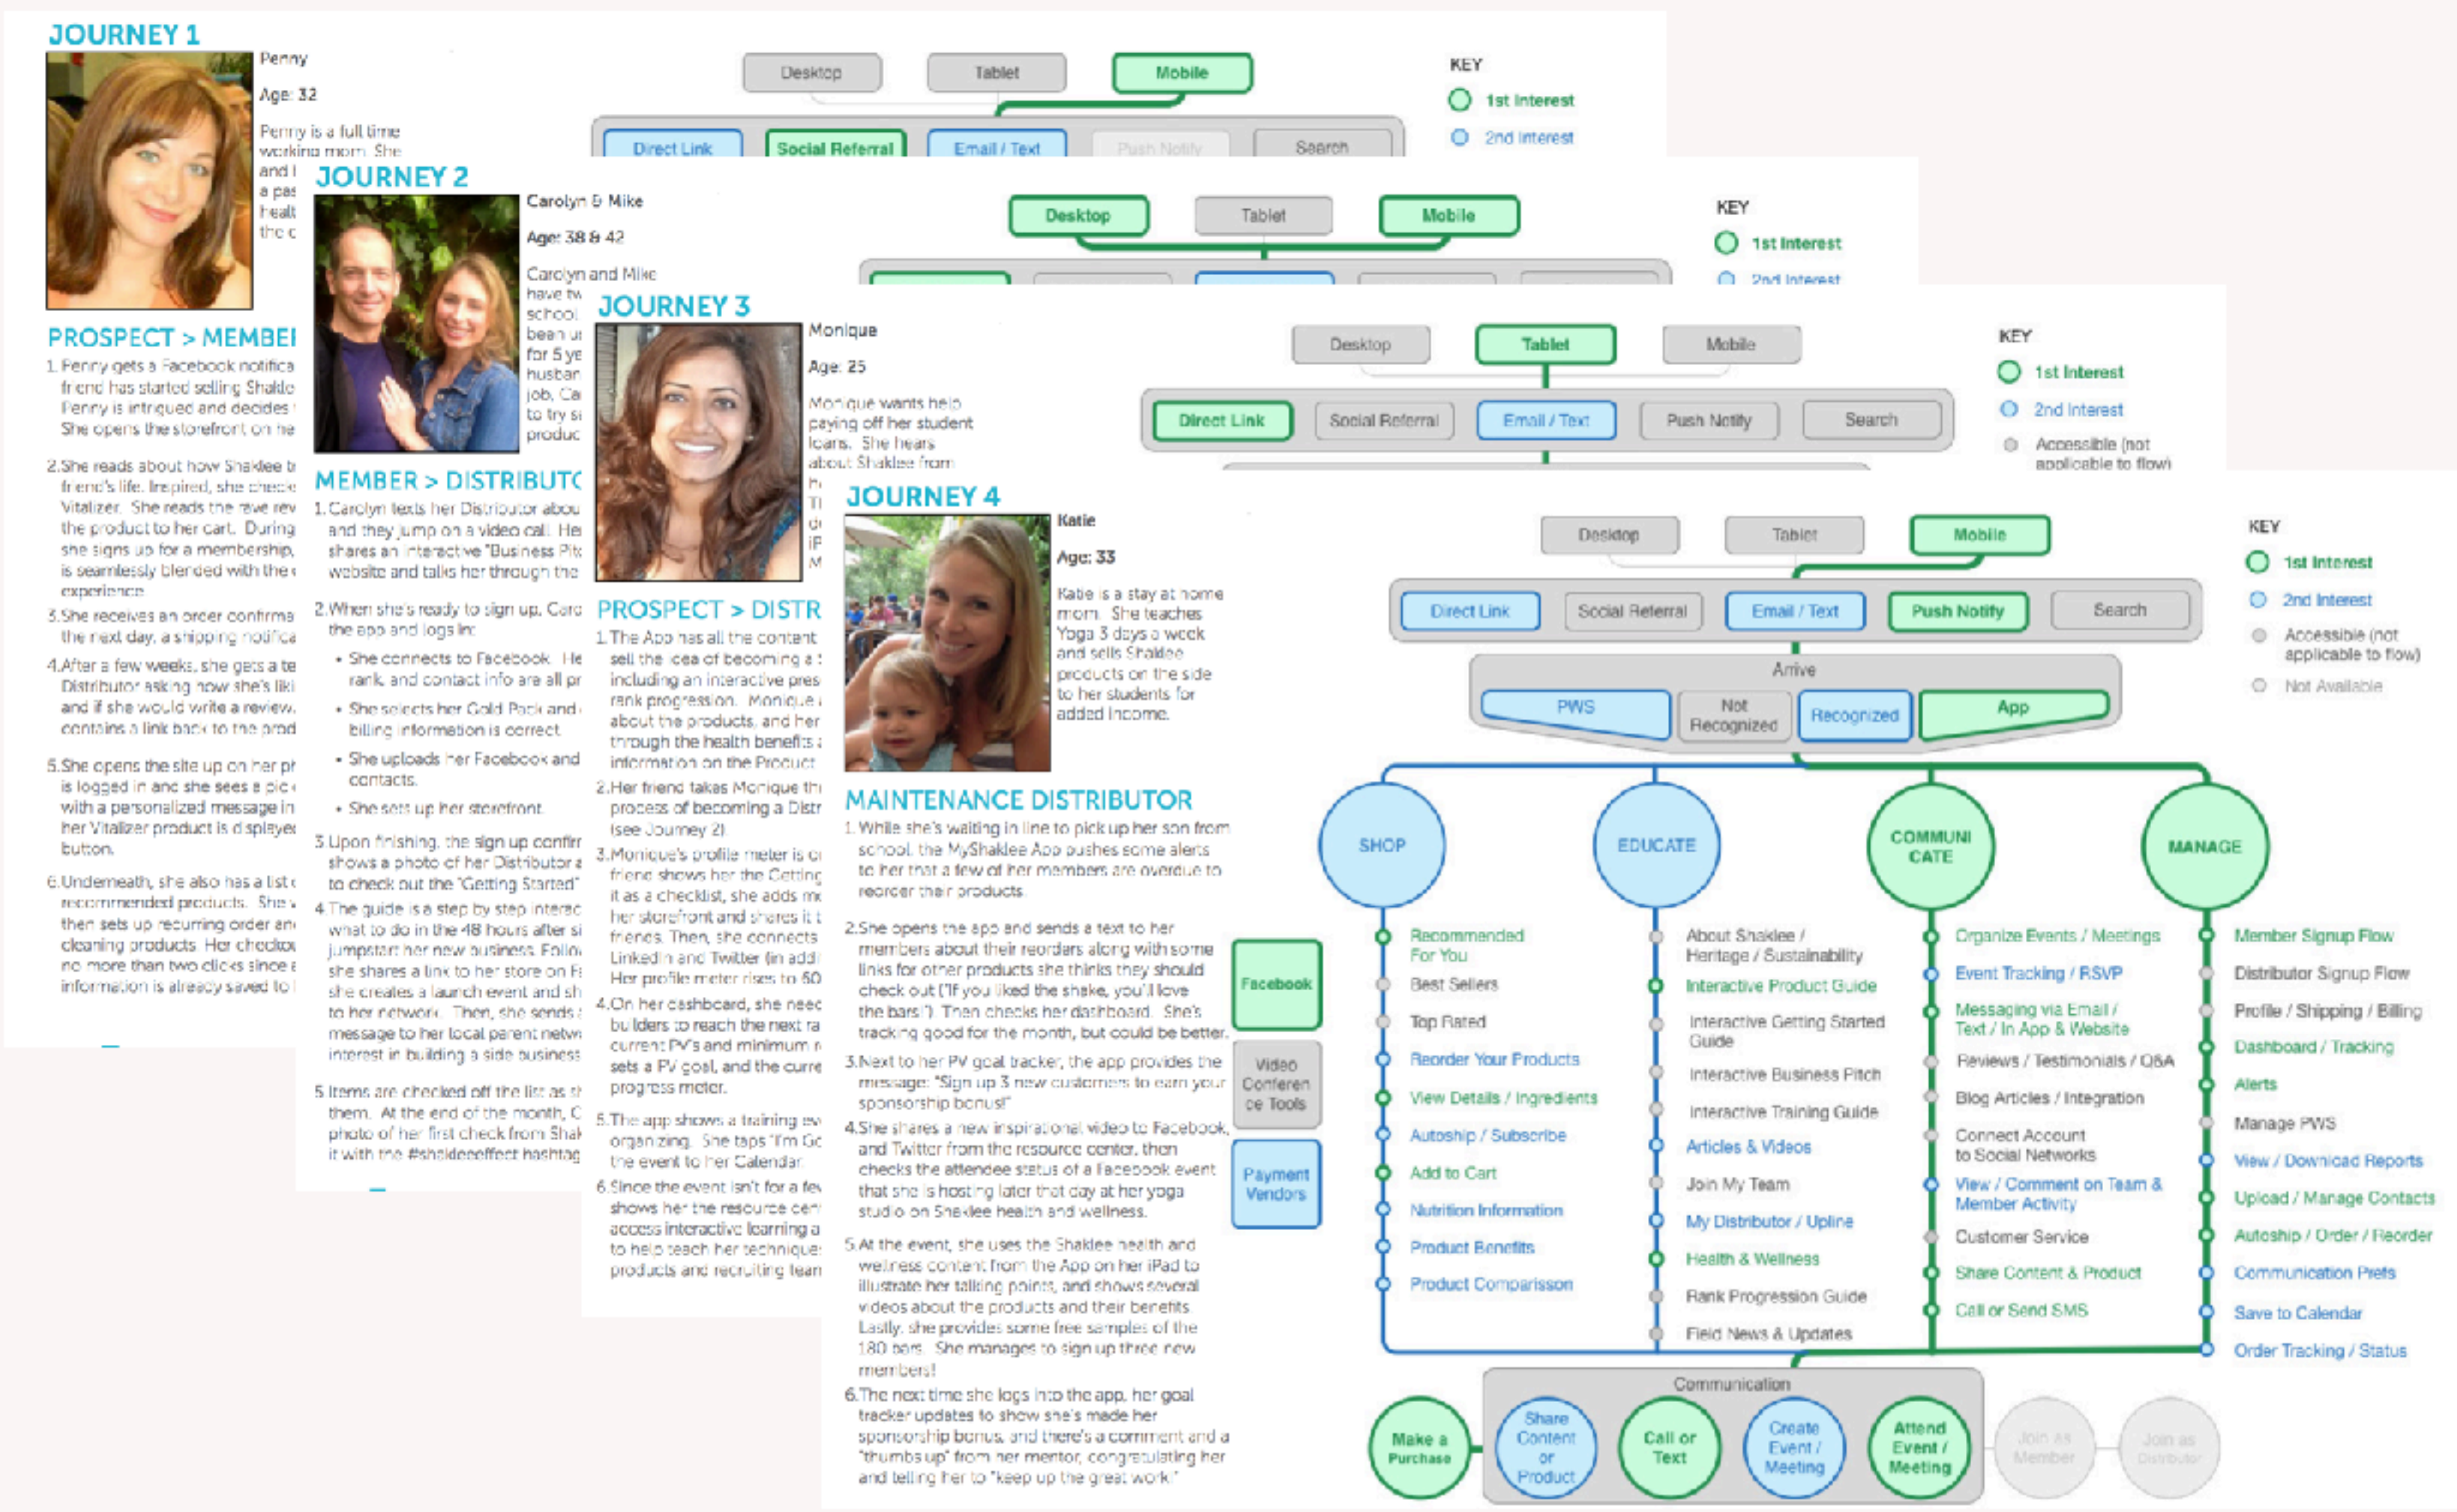

My Deliverables: Sketches, flows and annotated wireframes, that I also presented to the client.

I was constantly communicating with our UI Designers and with the dev team (in Texas) to assure max clarity on the functionalities and the interactions on the screen.

Useful Links

[+ SHAKLEE CONNECT ON IOS](#)

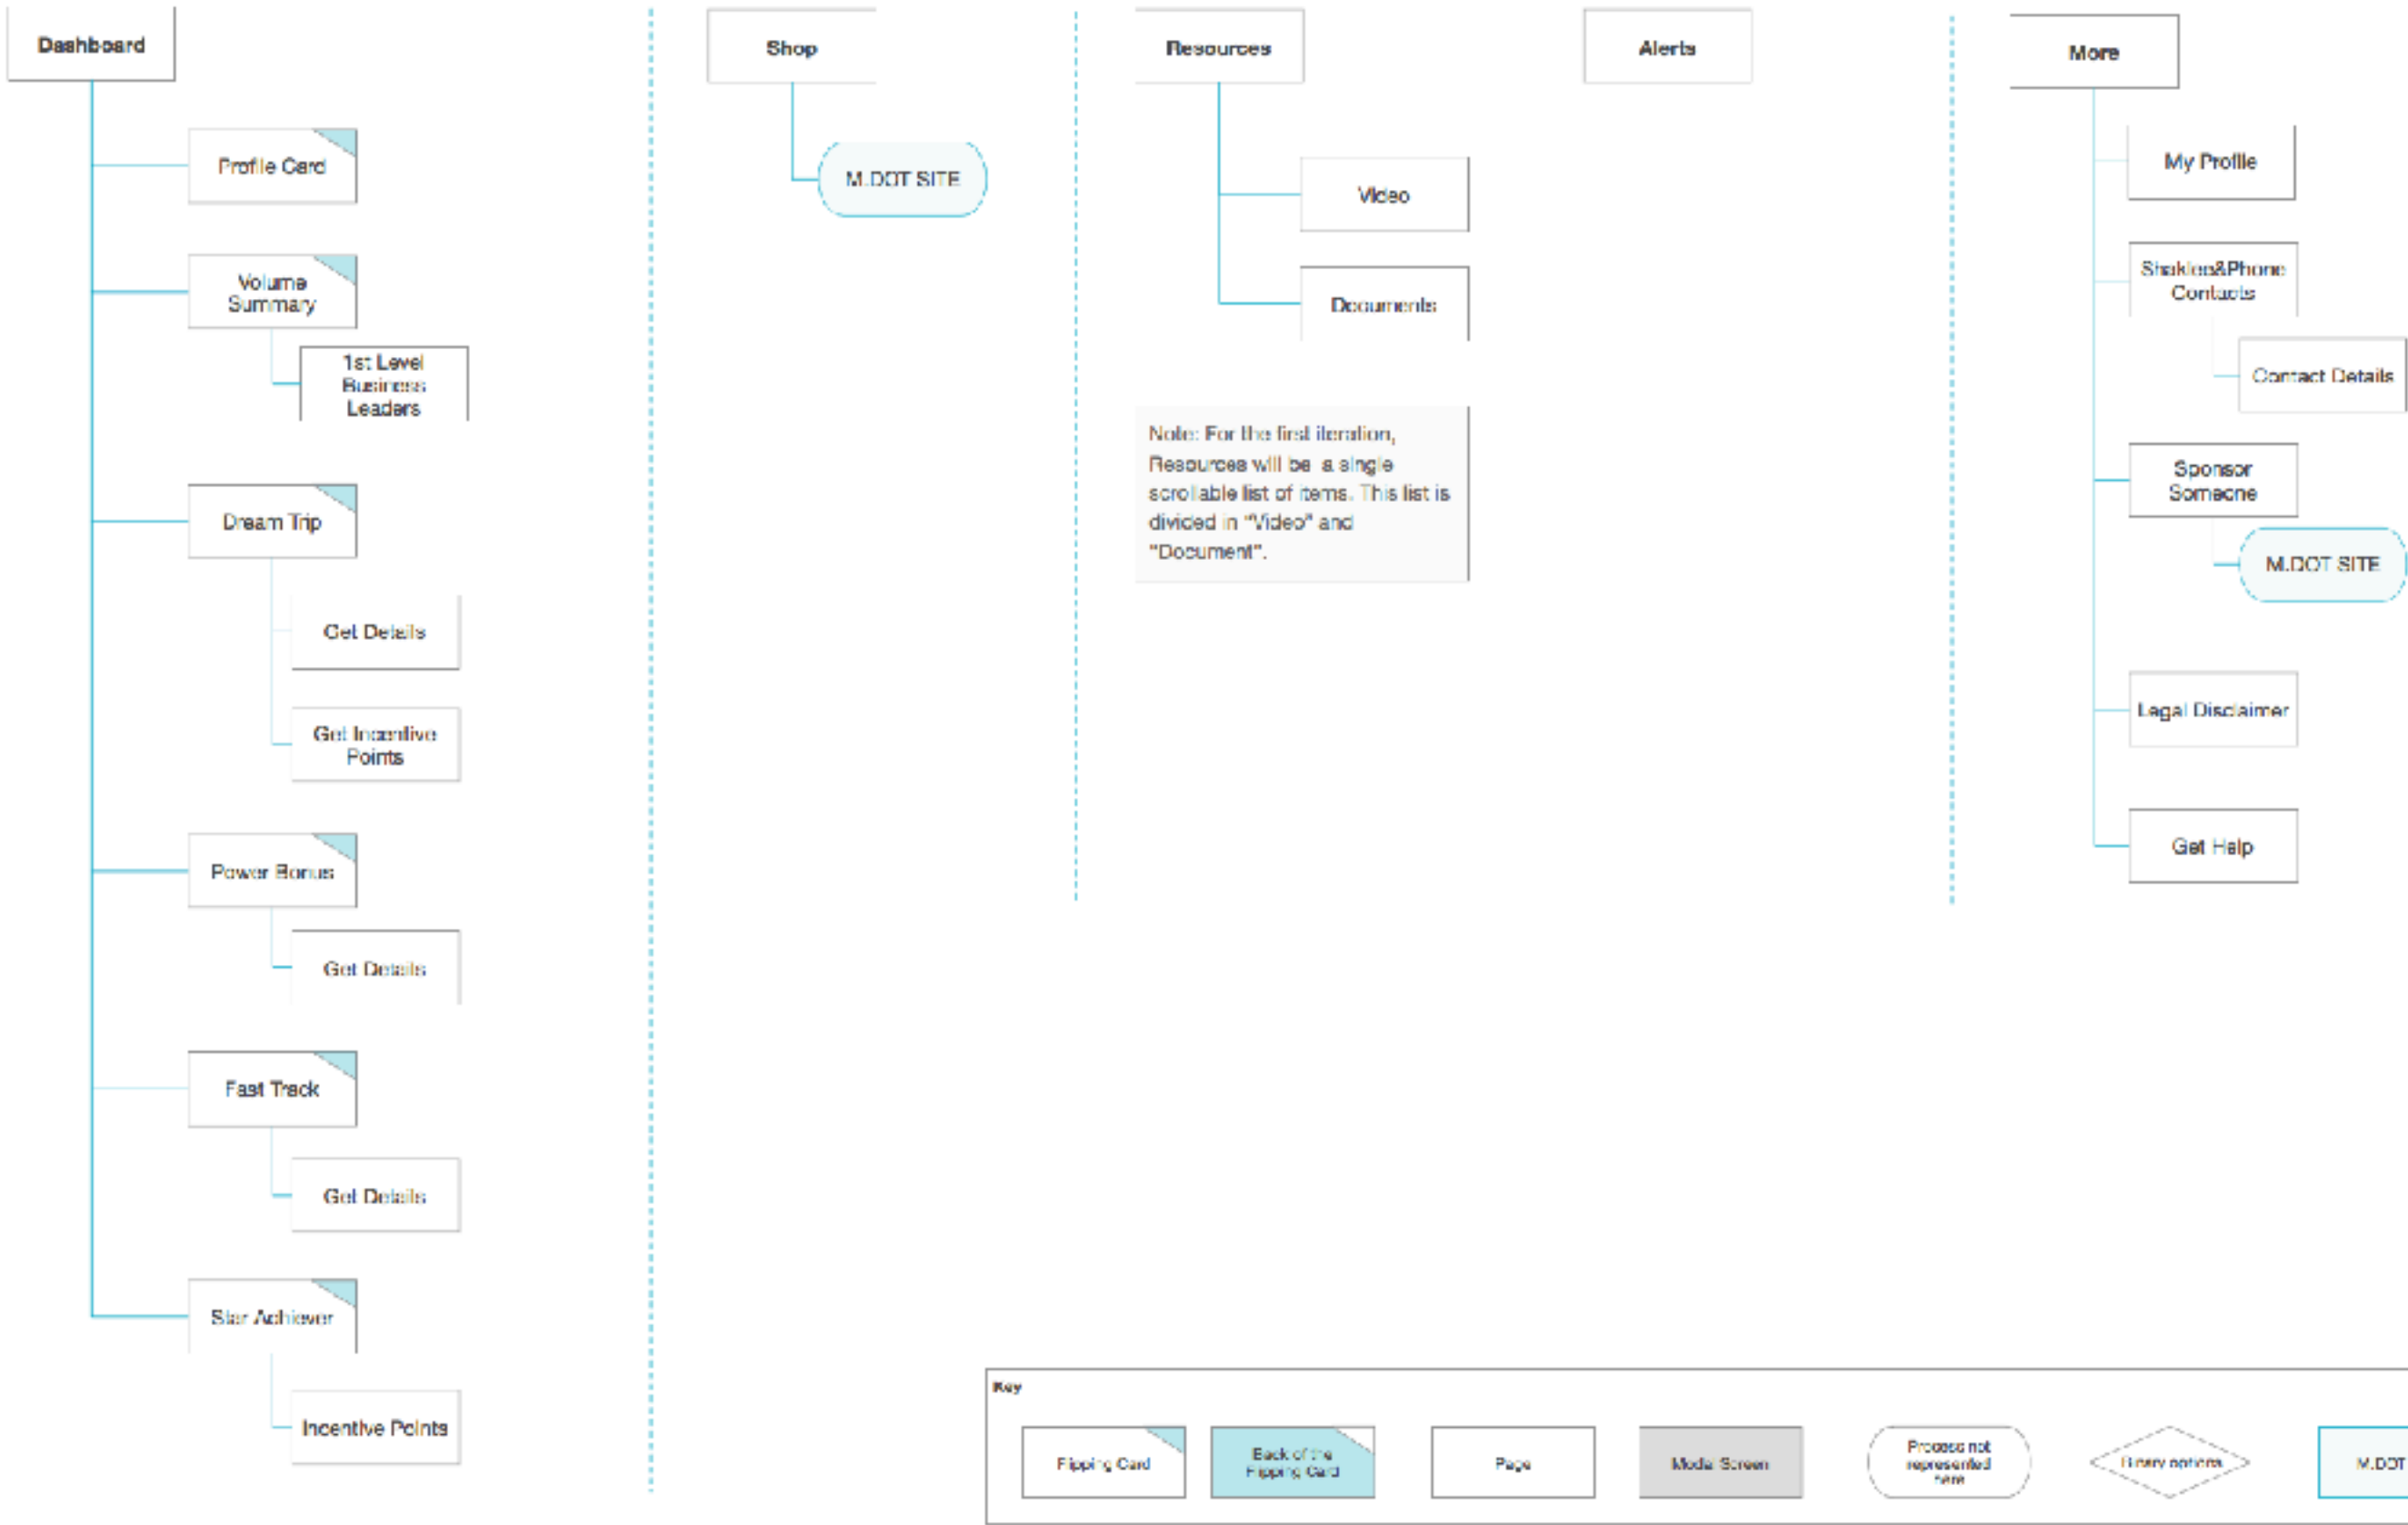

[+ SHAKLEE CONNECT ON ANDROID](#)

Personas and User Journeys

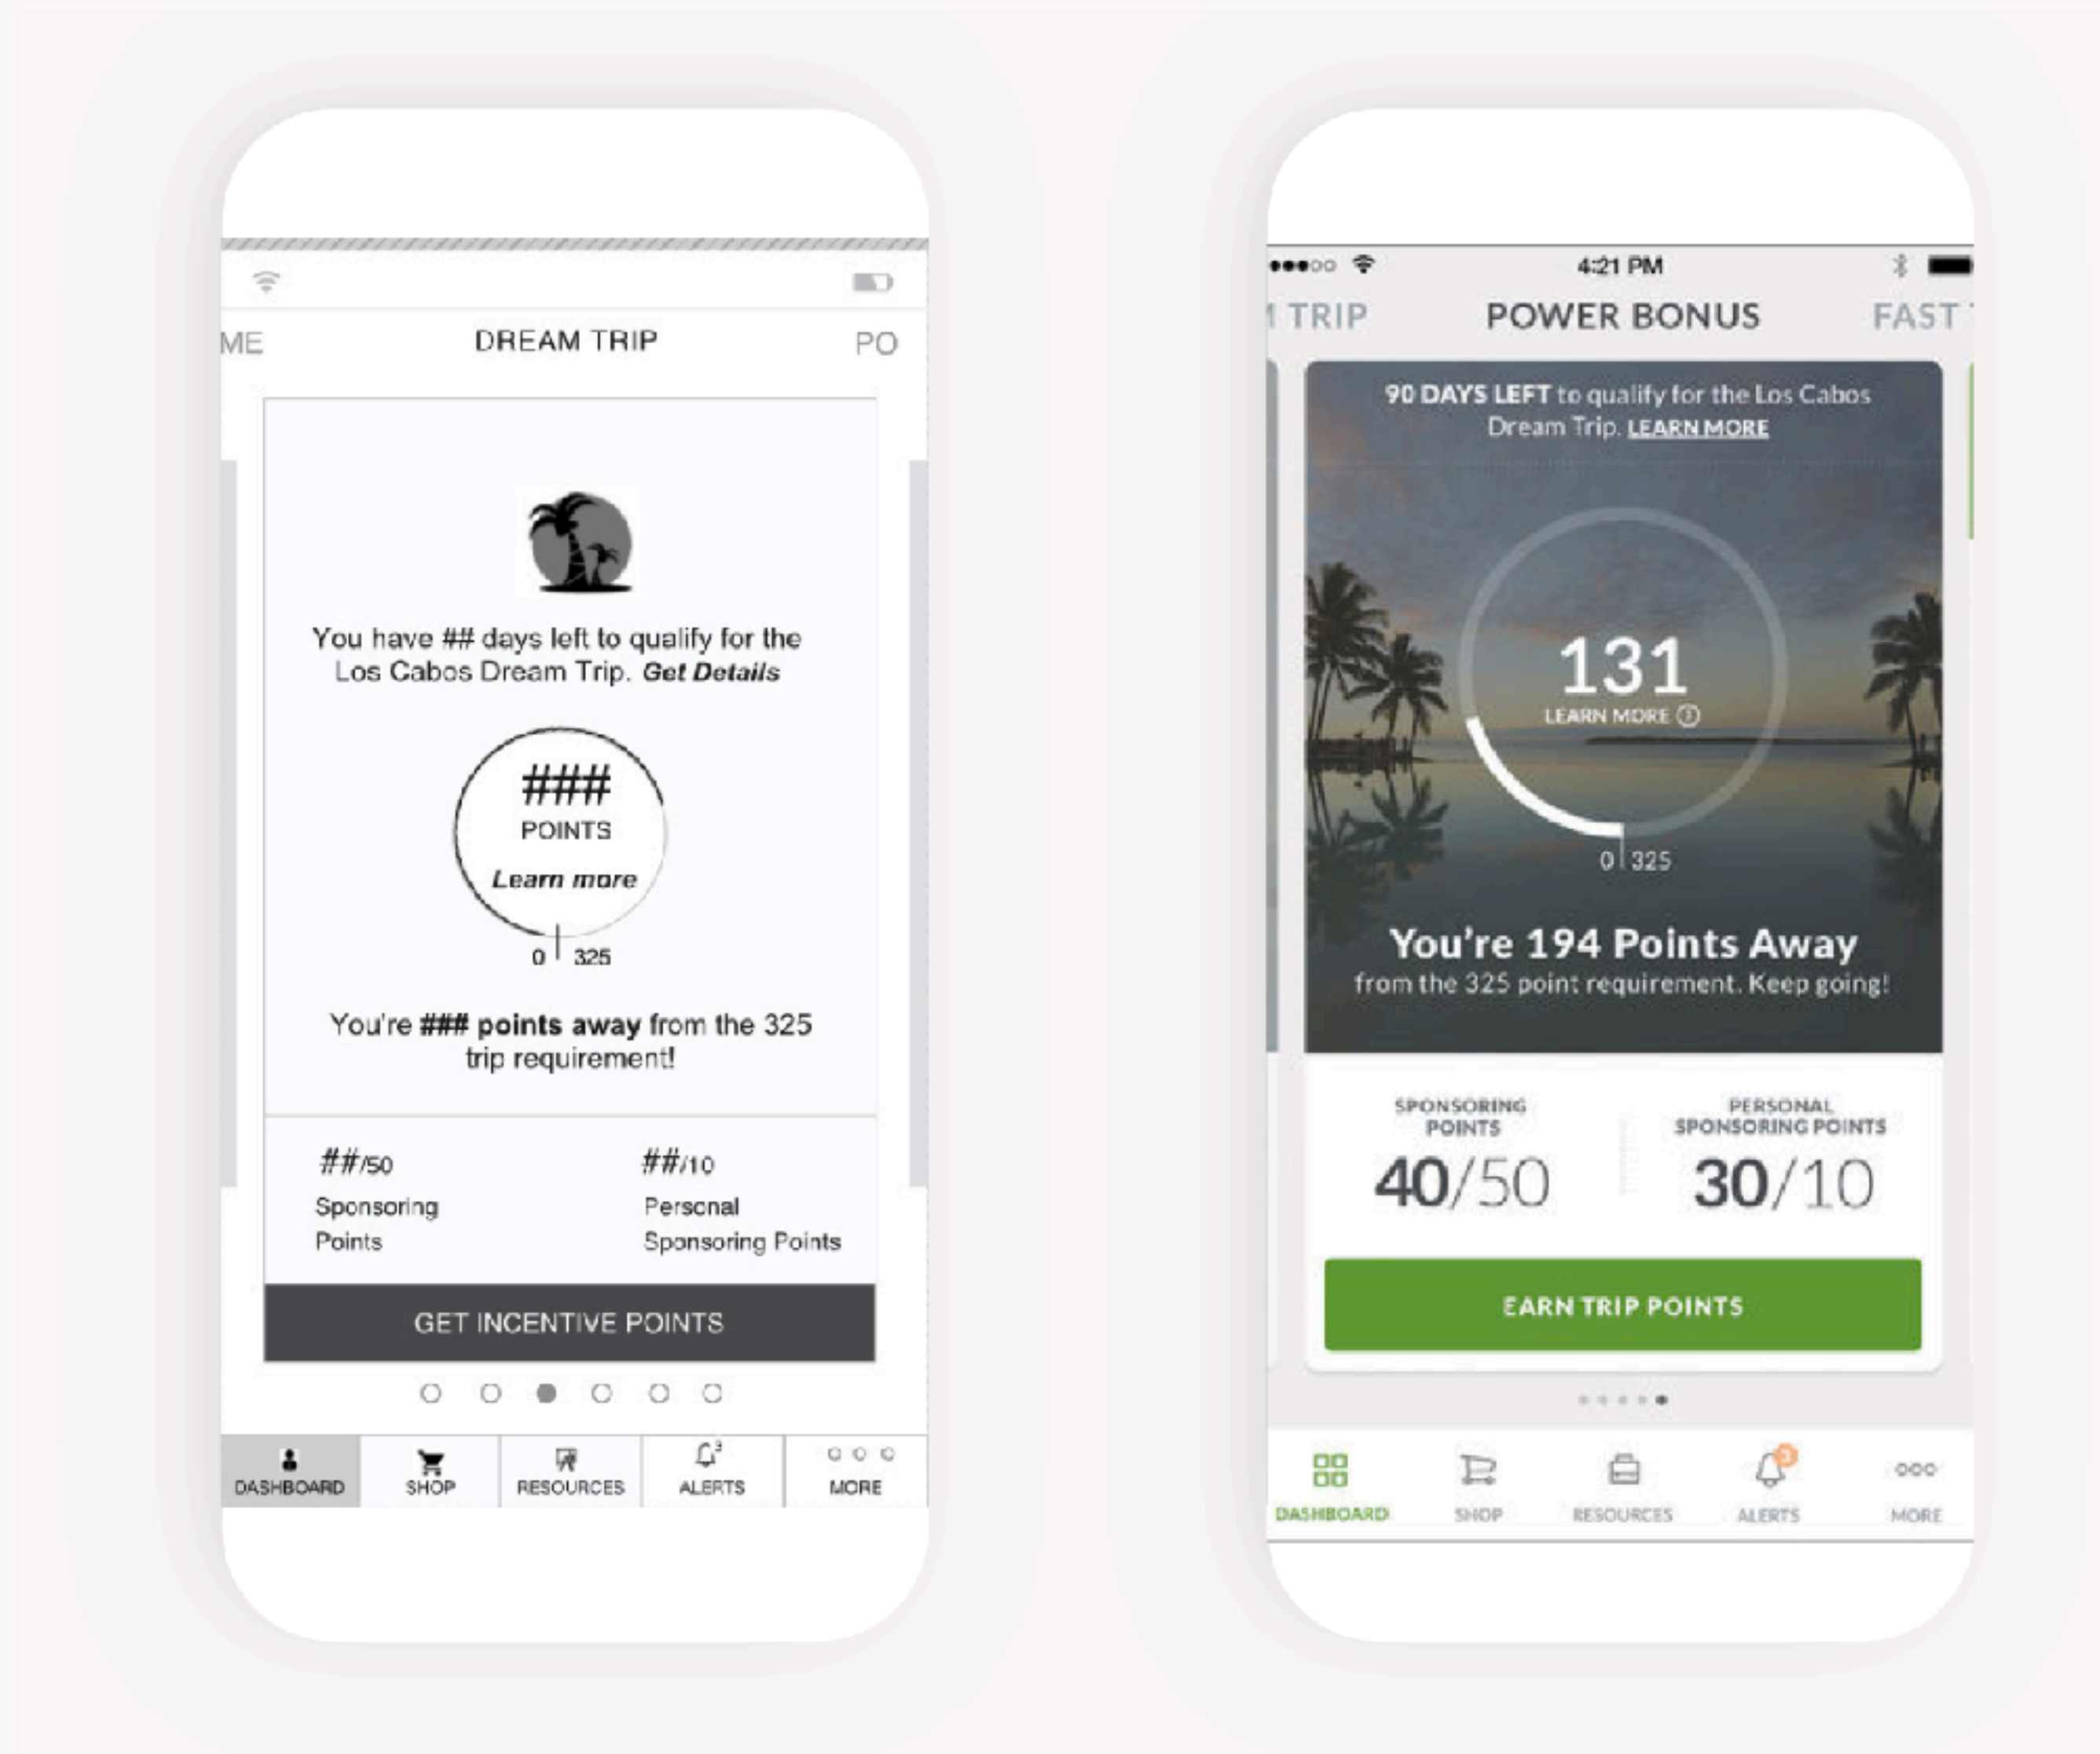

I started with the existing research and based my work on the consequential Personas and Journeys, expanding where needed

APP INVENTORY

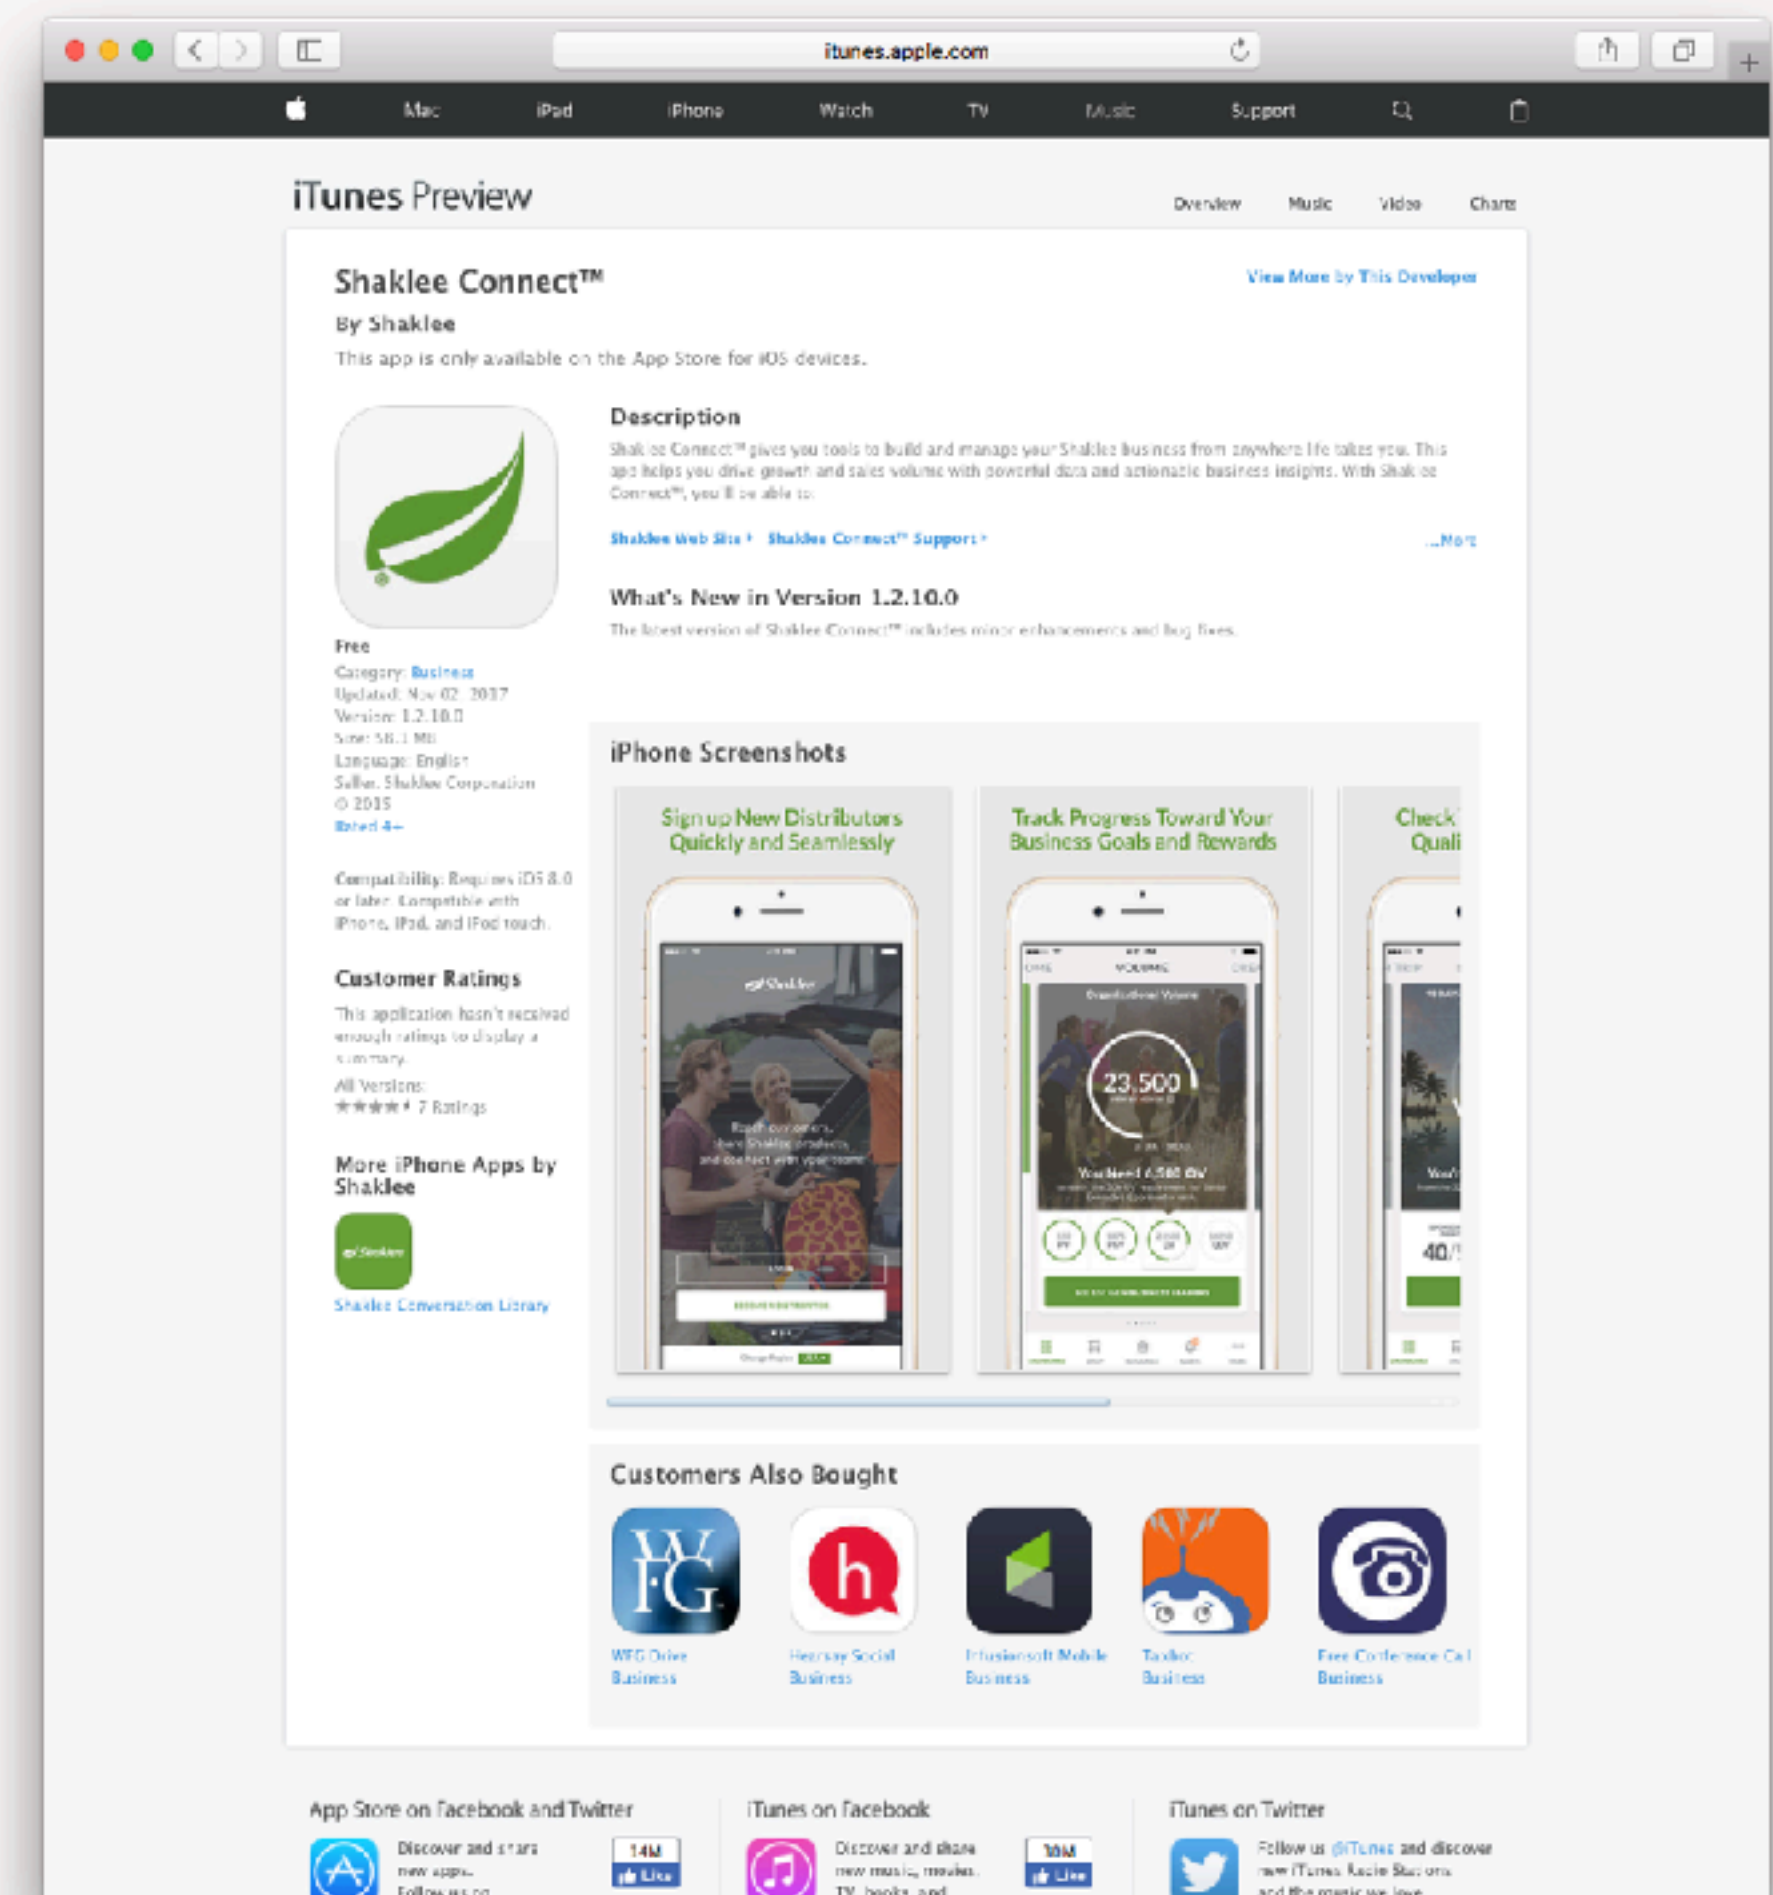

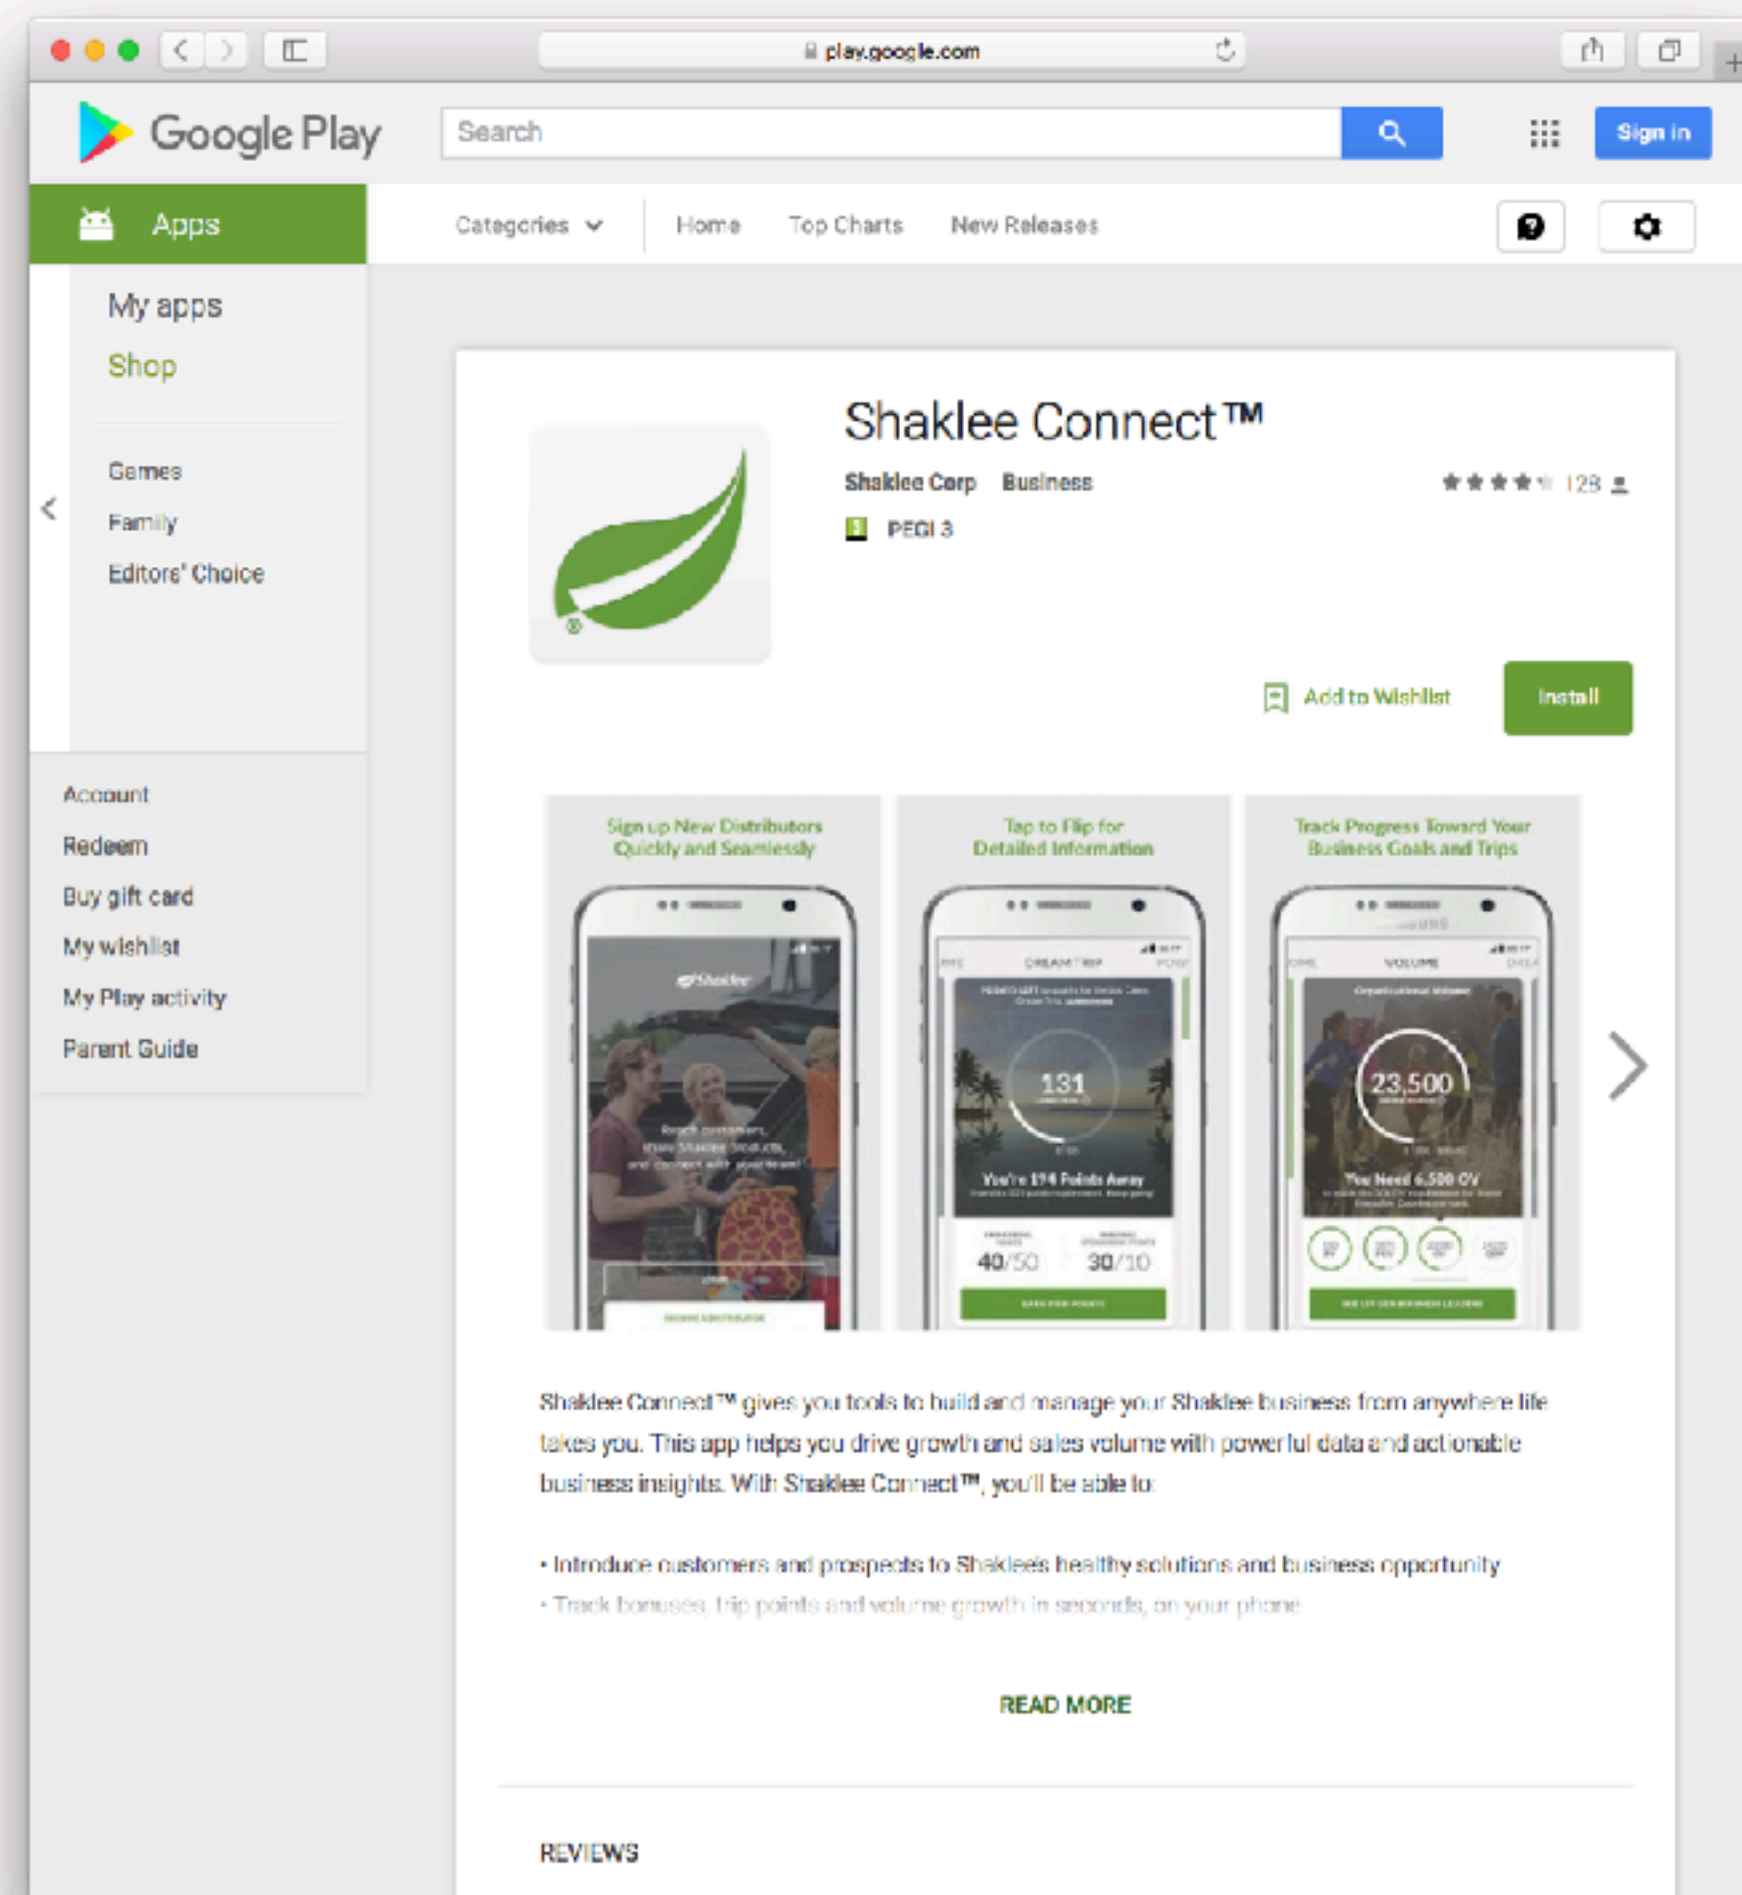

App Inventory and Flowcharts

I was constantly communicating the dev team (located in Texas) and the UI Designer to assure max clarity on the functionalities and the interactions on the screen.

From Wireframes to Pixel Perfect Designs

I designed flows and wireframes to be presented and signed off by the client. I worked with a visual designer to ensure that graphics and animations supported the experience and delighted the user.

Find the app in the store

Theo

A multi-device app for Realtors

Helping a Startup to thrive

Realtors

myTheo is a startup founded by real estate agents who wanted to solve the problems they encounter daily as realtors. I have the opportunity to see what is a startup in Silicon Valley and what are the stages and the challenges that it needs to face in order to be successful.

Also, the Real Estate Industry presents a very interesting challenge: who owns the data (MLSs - Multiple Listing Service) is not willing to give it away. At the same time, they need to provide data to Agents in order to be valuable.

From an interaction point of view, an Agent is local but always on the move, constantly networking with agents (teammates and foes) and clients. They obviously need the right information at the right time.

This and the fact that the product was being built by its users, made my challenge as UXer even more interesting.

Altaterra: the project

Kick Off

The Client: myTheo Inc

Roles and objectives were defined and estimates on the effort expected were made. A roadmap with milestones was flashed out so to plan for the next sprints.

Discover and Define

I planned and executed Stakeholders focus group and Interviews, and competitor analysis that helped to define business requirements, real budget, and desirable outcomes.

With the initial research findings, I started to flash out users pain-points, informational needs, and activities to be supported by the app.

Develop and Deliver

My Deliverables:

I organised co-creation workshops with stakeholders and users to sketch tasks and activities;

I defined flows, annotated wireframes, and built prototypes on Axure and ProtoIO to test with users.

Roadmap

After the kick off meeting we established our roles, and our roadmap with milestone

Interviews and Card Sorting

I planned and executed 12 user interviews that included a card sorting exercise, for both clients and agents. I explored the current experience and the information they needed.

Being a Real Estate Agent

Ally Brown, Real Estate Agent from 2005
Agent of buyer clients

Ally is around her 40's, has 2 kids and a wonderful wife. She is an agent for

She spends her weeks going up and down the Bay, browsing properties for her clients.

For Ally, a typical week starts on Tuesday, early in the morning: first, she checks emails and messages on her computer and smartphone from her clients. Then she updates a list of properties that she wants to see during the week.

The list she makes includes properties in all San Francisco neighborhoods. Some are properties that clients are curious about and some other are properties that Ally thinks some clients will like. List is ready, coffee in her hand and away she goes

Activities and pain-points

It takes her an hour by car to get to San Francisco, where she has the most of the properties she will see on Tuesday. Reaching the first property, Ally starts thinking about what to say to her clients about the neighborhood. Once she is in front of the house, she notices a little crack coming down from the roof: that's something she has to check with Guy the roofer. Going inside the house she takes notes about things she likes and things she doesn't like. The bathroom needs a renovation that her friend Tom can do in 2 weeks, she better check it her with her as well

The day passes by, once at home Ally takes a few moments to make a summary of what she has seen and then prepares a list to share with her clients, including her notes

The day after, Ally does the same things she had done on Tuesday, but in a different area of the Bay: she goes south to Santa Cruz. This time, Ally has 4 properties she wants to see for one specific client. Ally knows well that her client, she spent a couple afternoons -and exchanged many messages- with her and her wife to understand their needs as buyers. Ally has stored all the expectation her clients revealed her about the house. When Ally met the client, it took a few days before the client agreed that Ally was the right person to help her buy a new house. While she goes to the first property she starts to record her thoughts: the neighborhood looks interesting and charming. The house from the outside looks perfect and from the inside seems just renewed. At the end of the day the first house seems the only one her clients would buy.

The week passes by, and on Friday, Ally updates a list of all the open houses her clients would love to see that weekend.

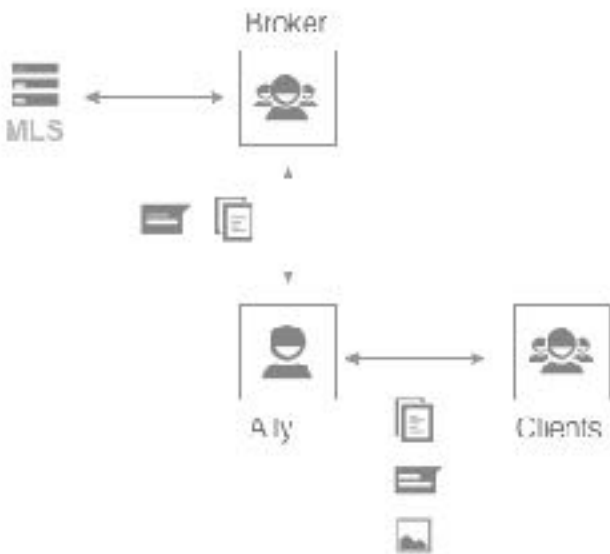

Becomes a Real Estate Agent

Can sell real estate under the supervision of a broker and collects a commission from the sponsoring broker.

Brokers, Brokerage Firms

Agent license
Broker agreement
....

Access to listings (MLS)

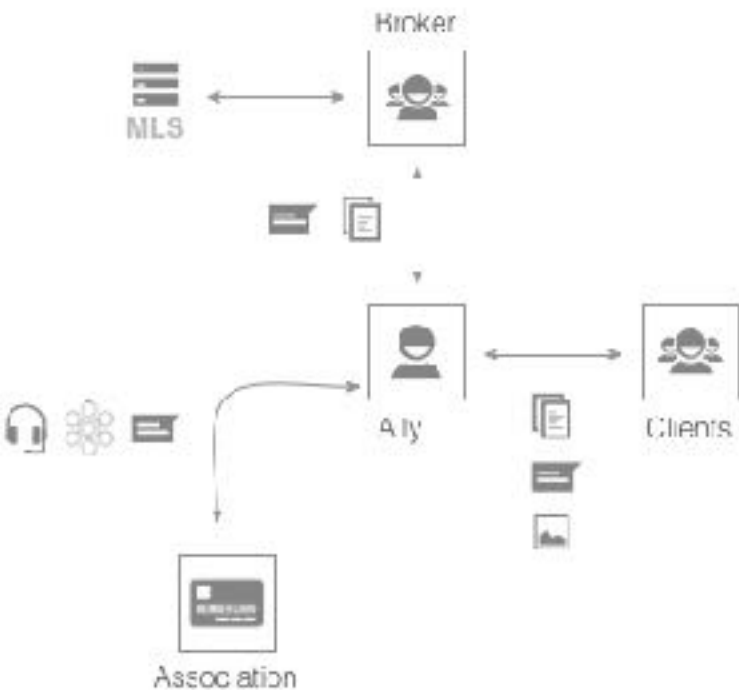

Joins an Association

Joining an Association, an agent can become a Realtor, for the Association being part of the National Association of Realtor

Association

Documents

Networking, Legal Assistance

Day by day as a Real Estate Agent

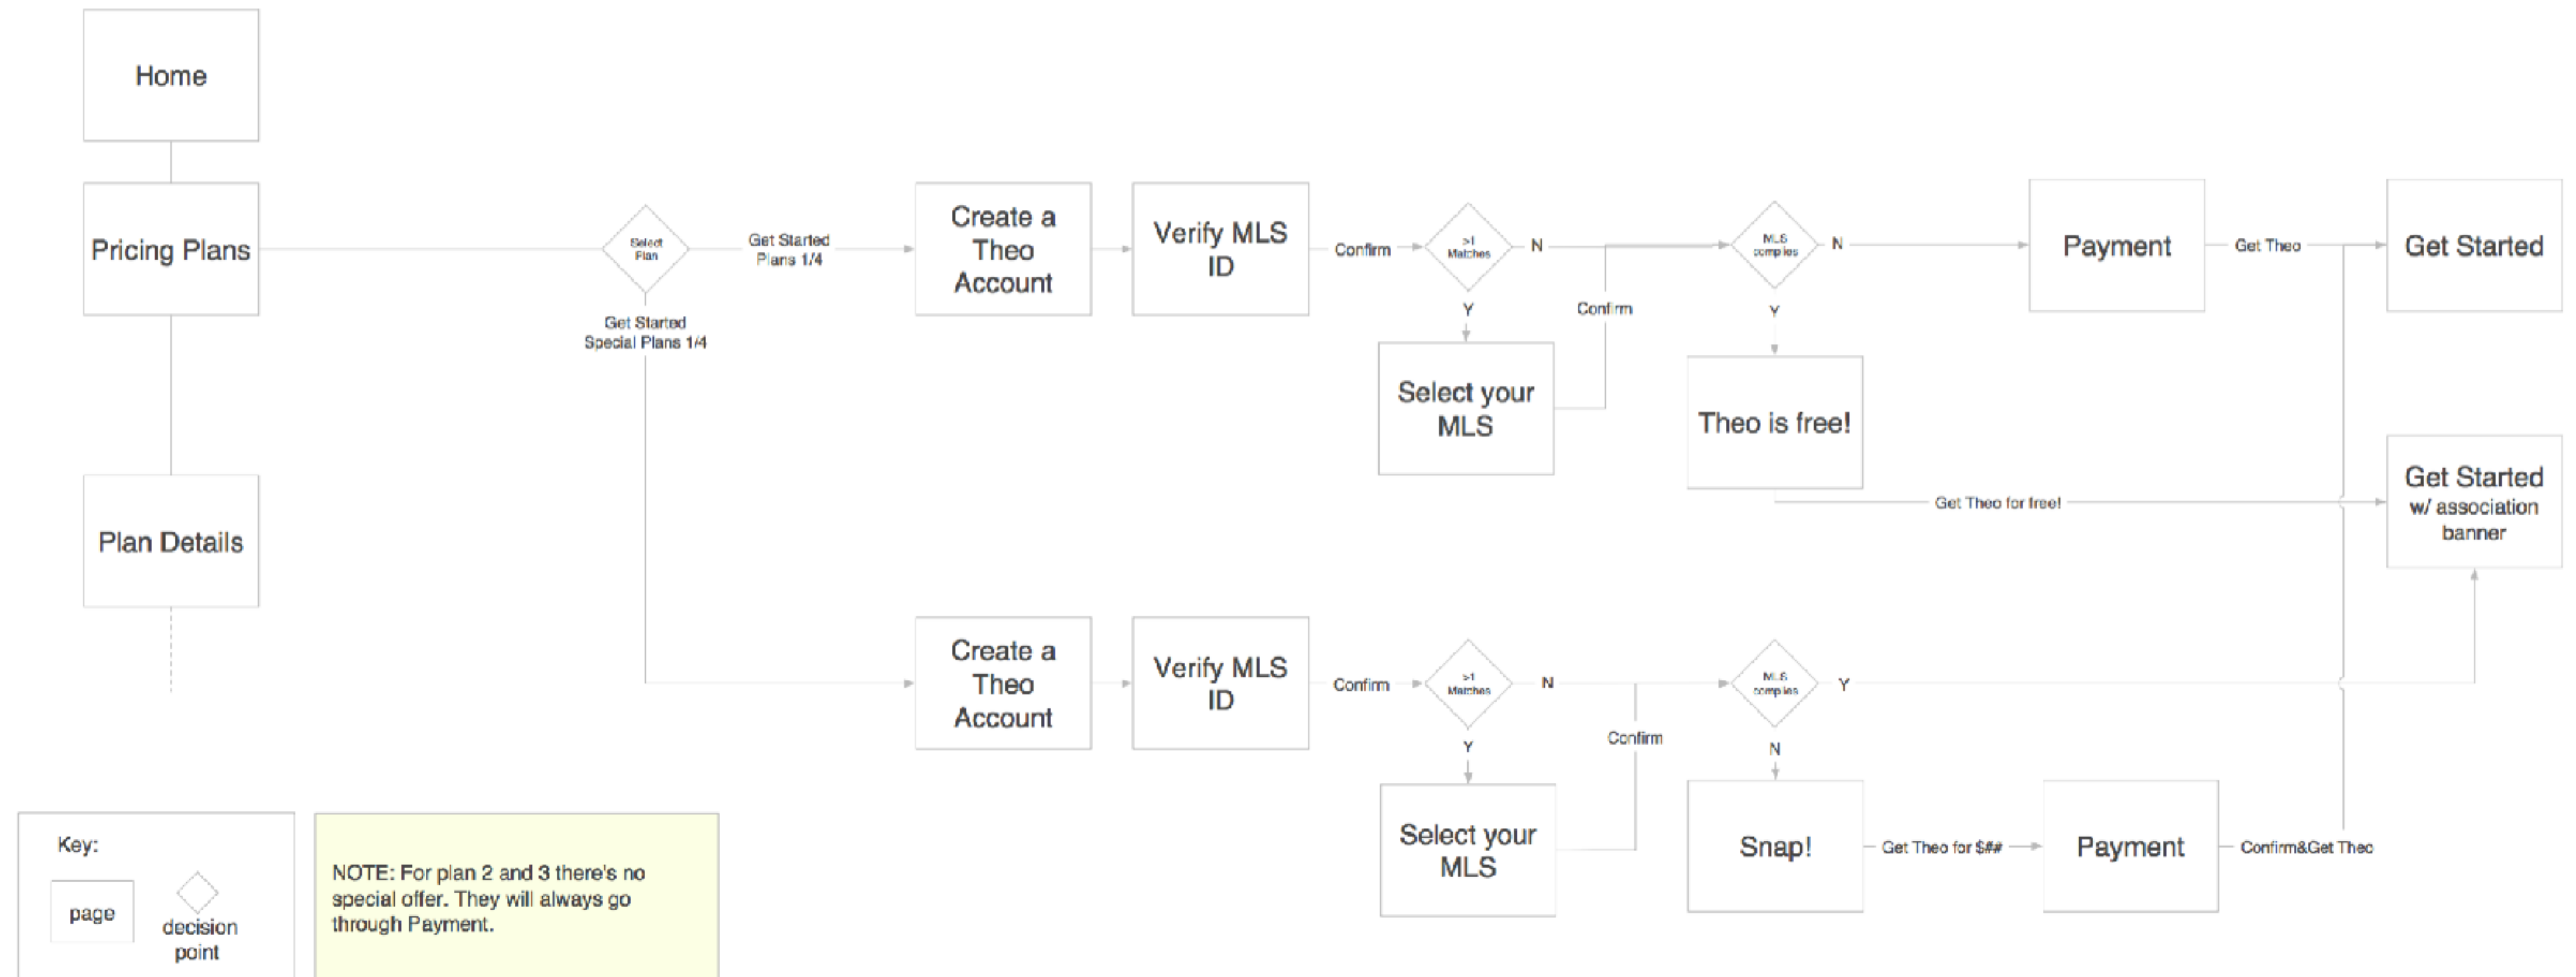

Professionals

Other Agents
Brokers
Association
Contractors

Appraisals
Lawyers

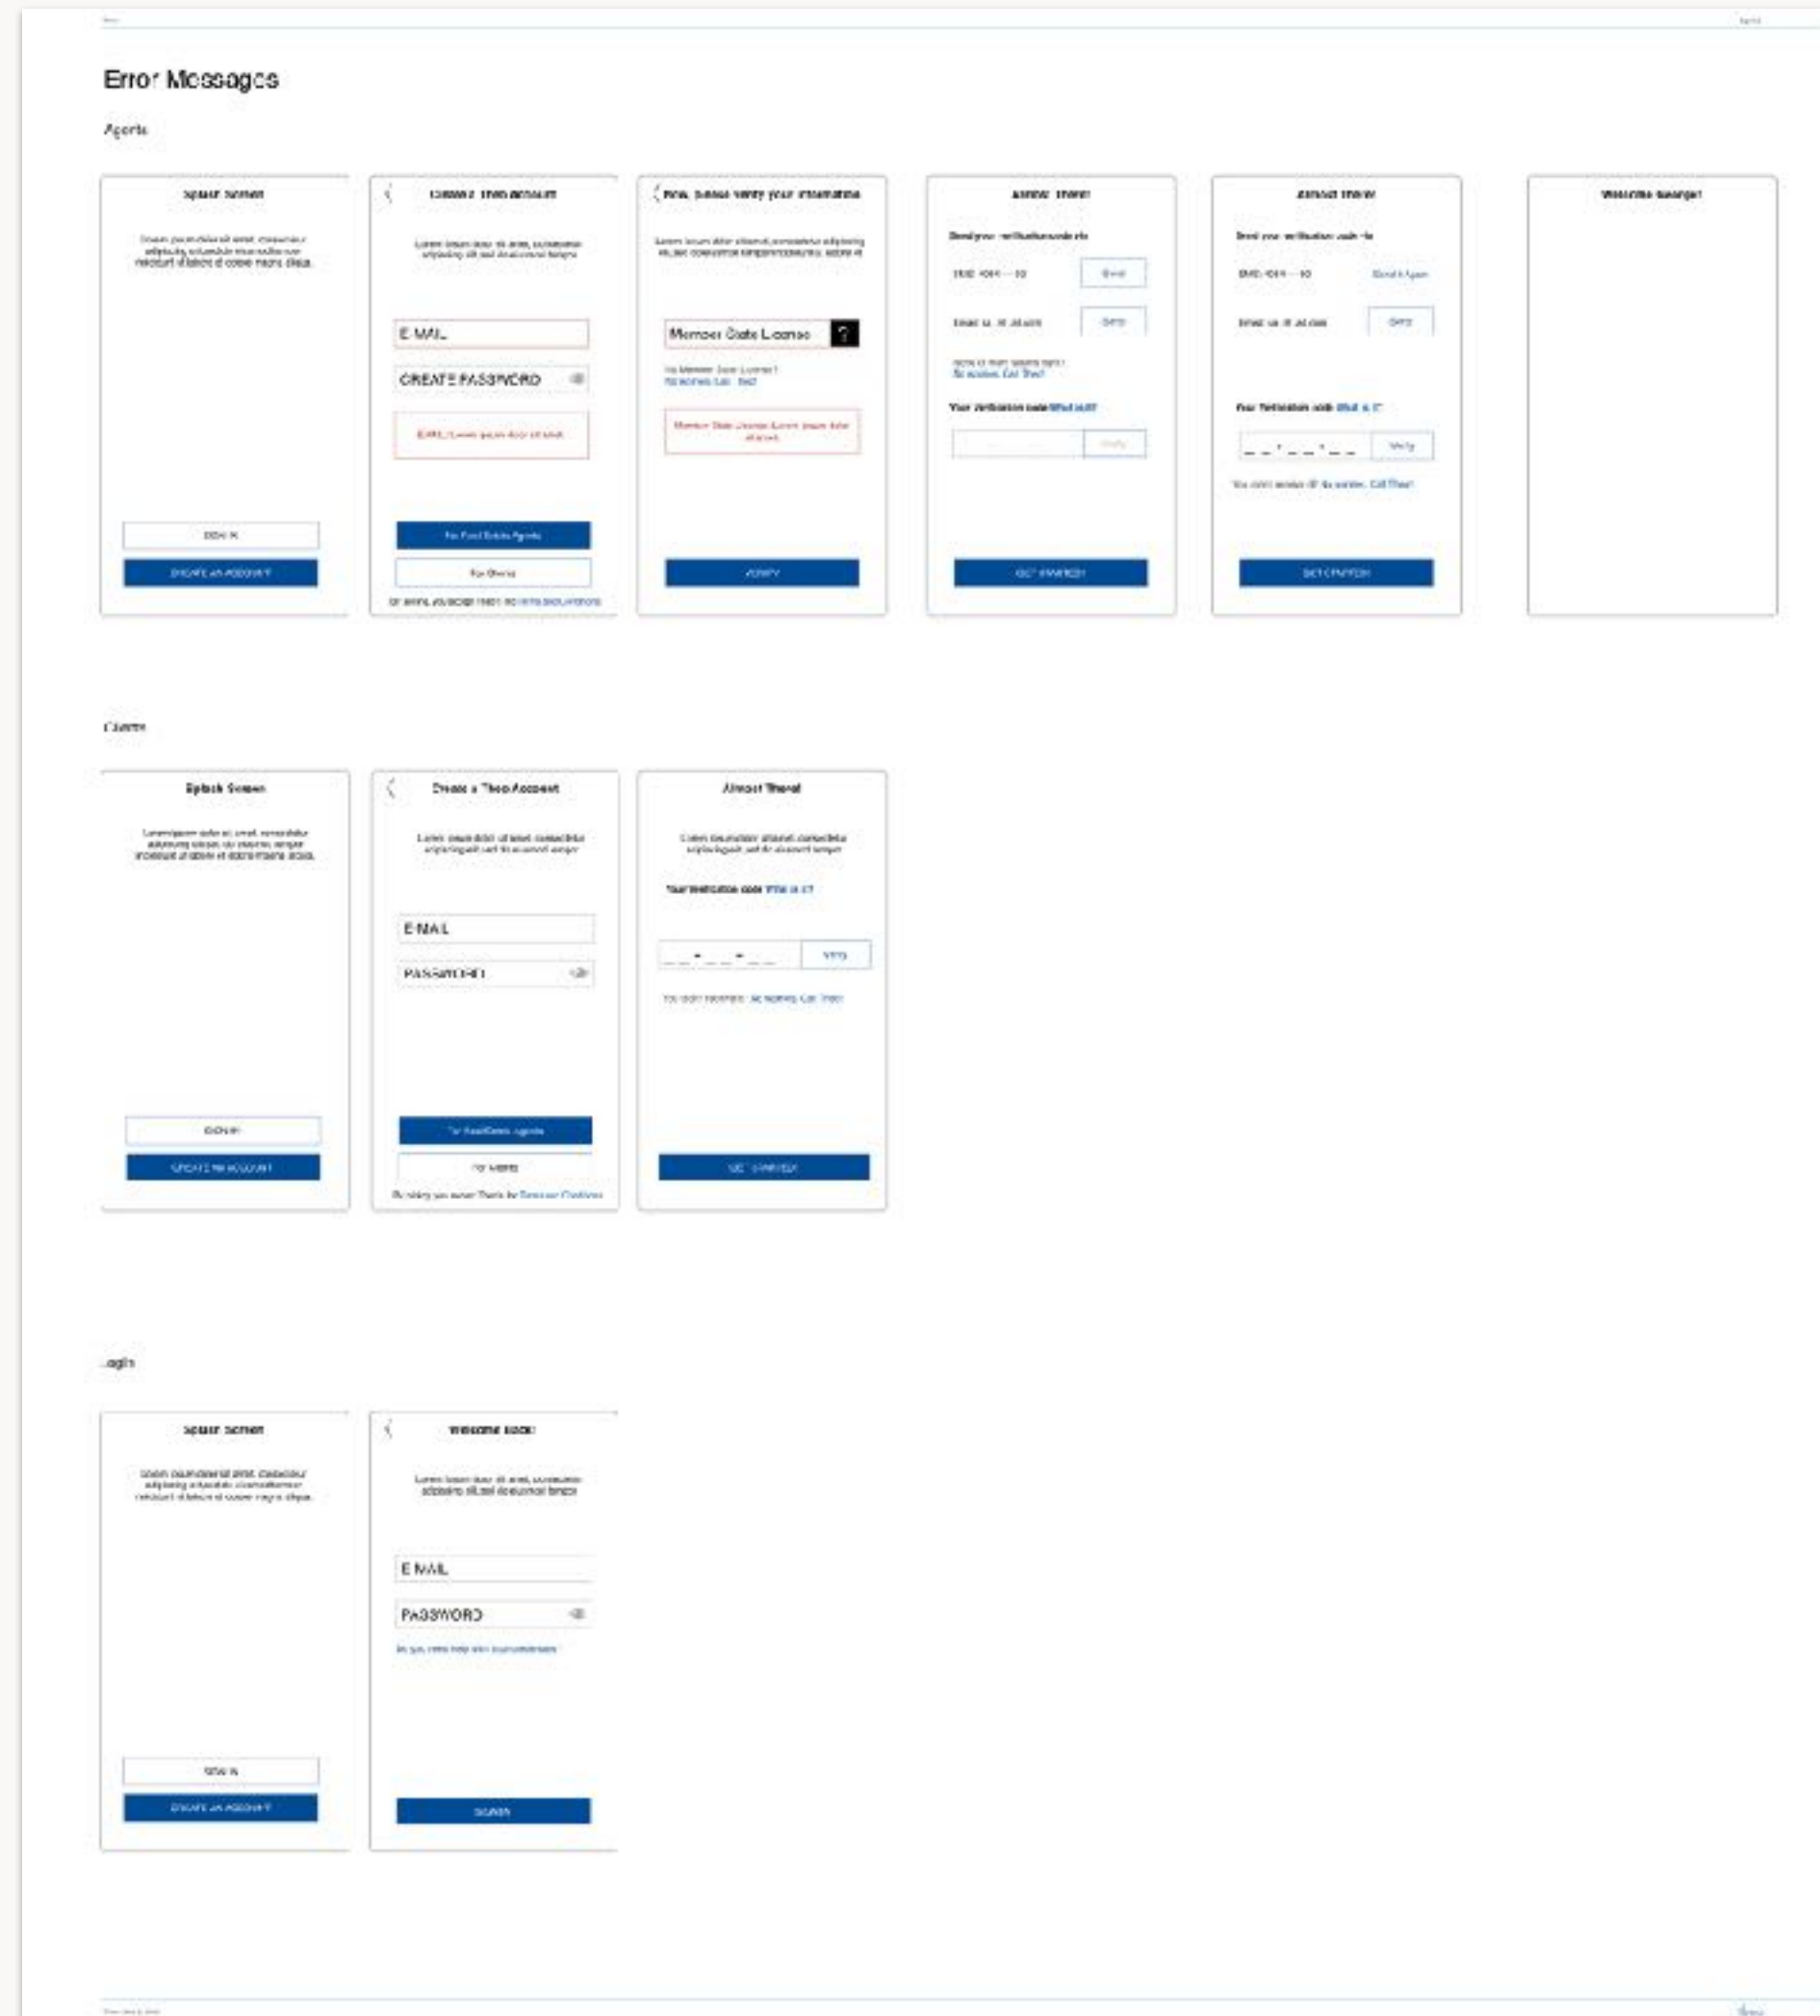

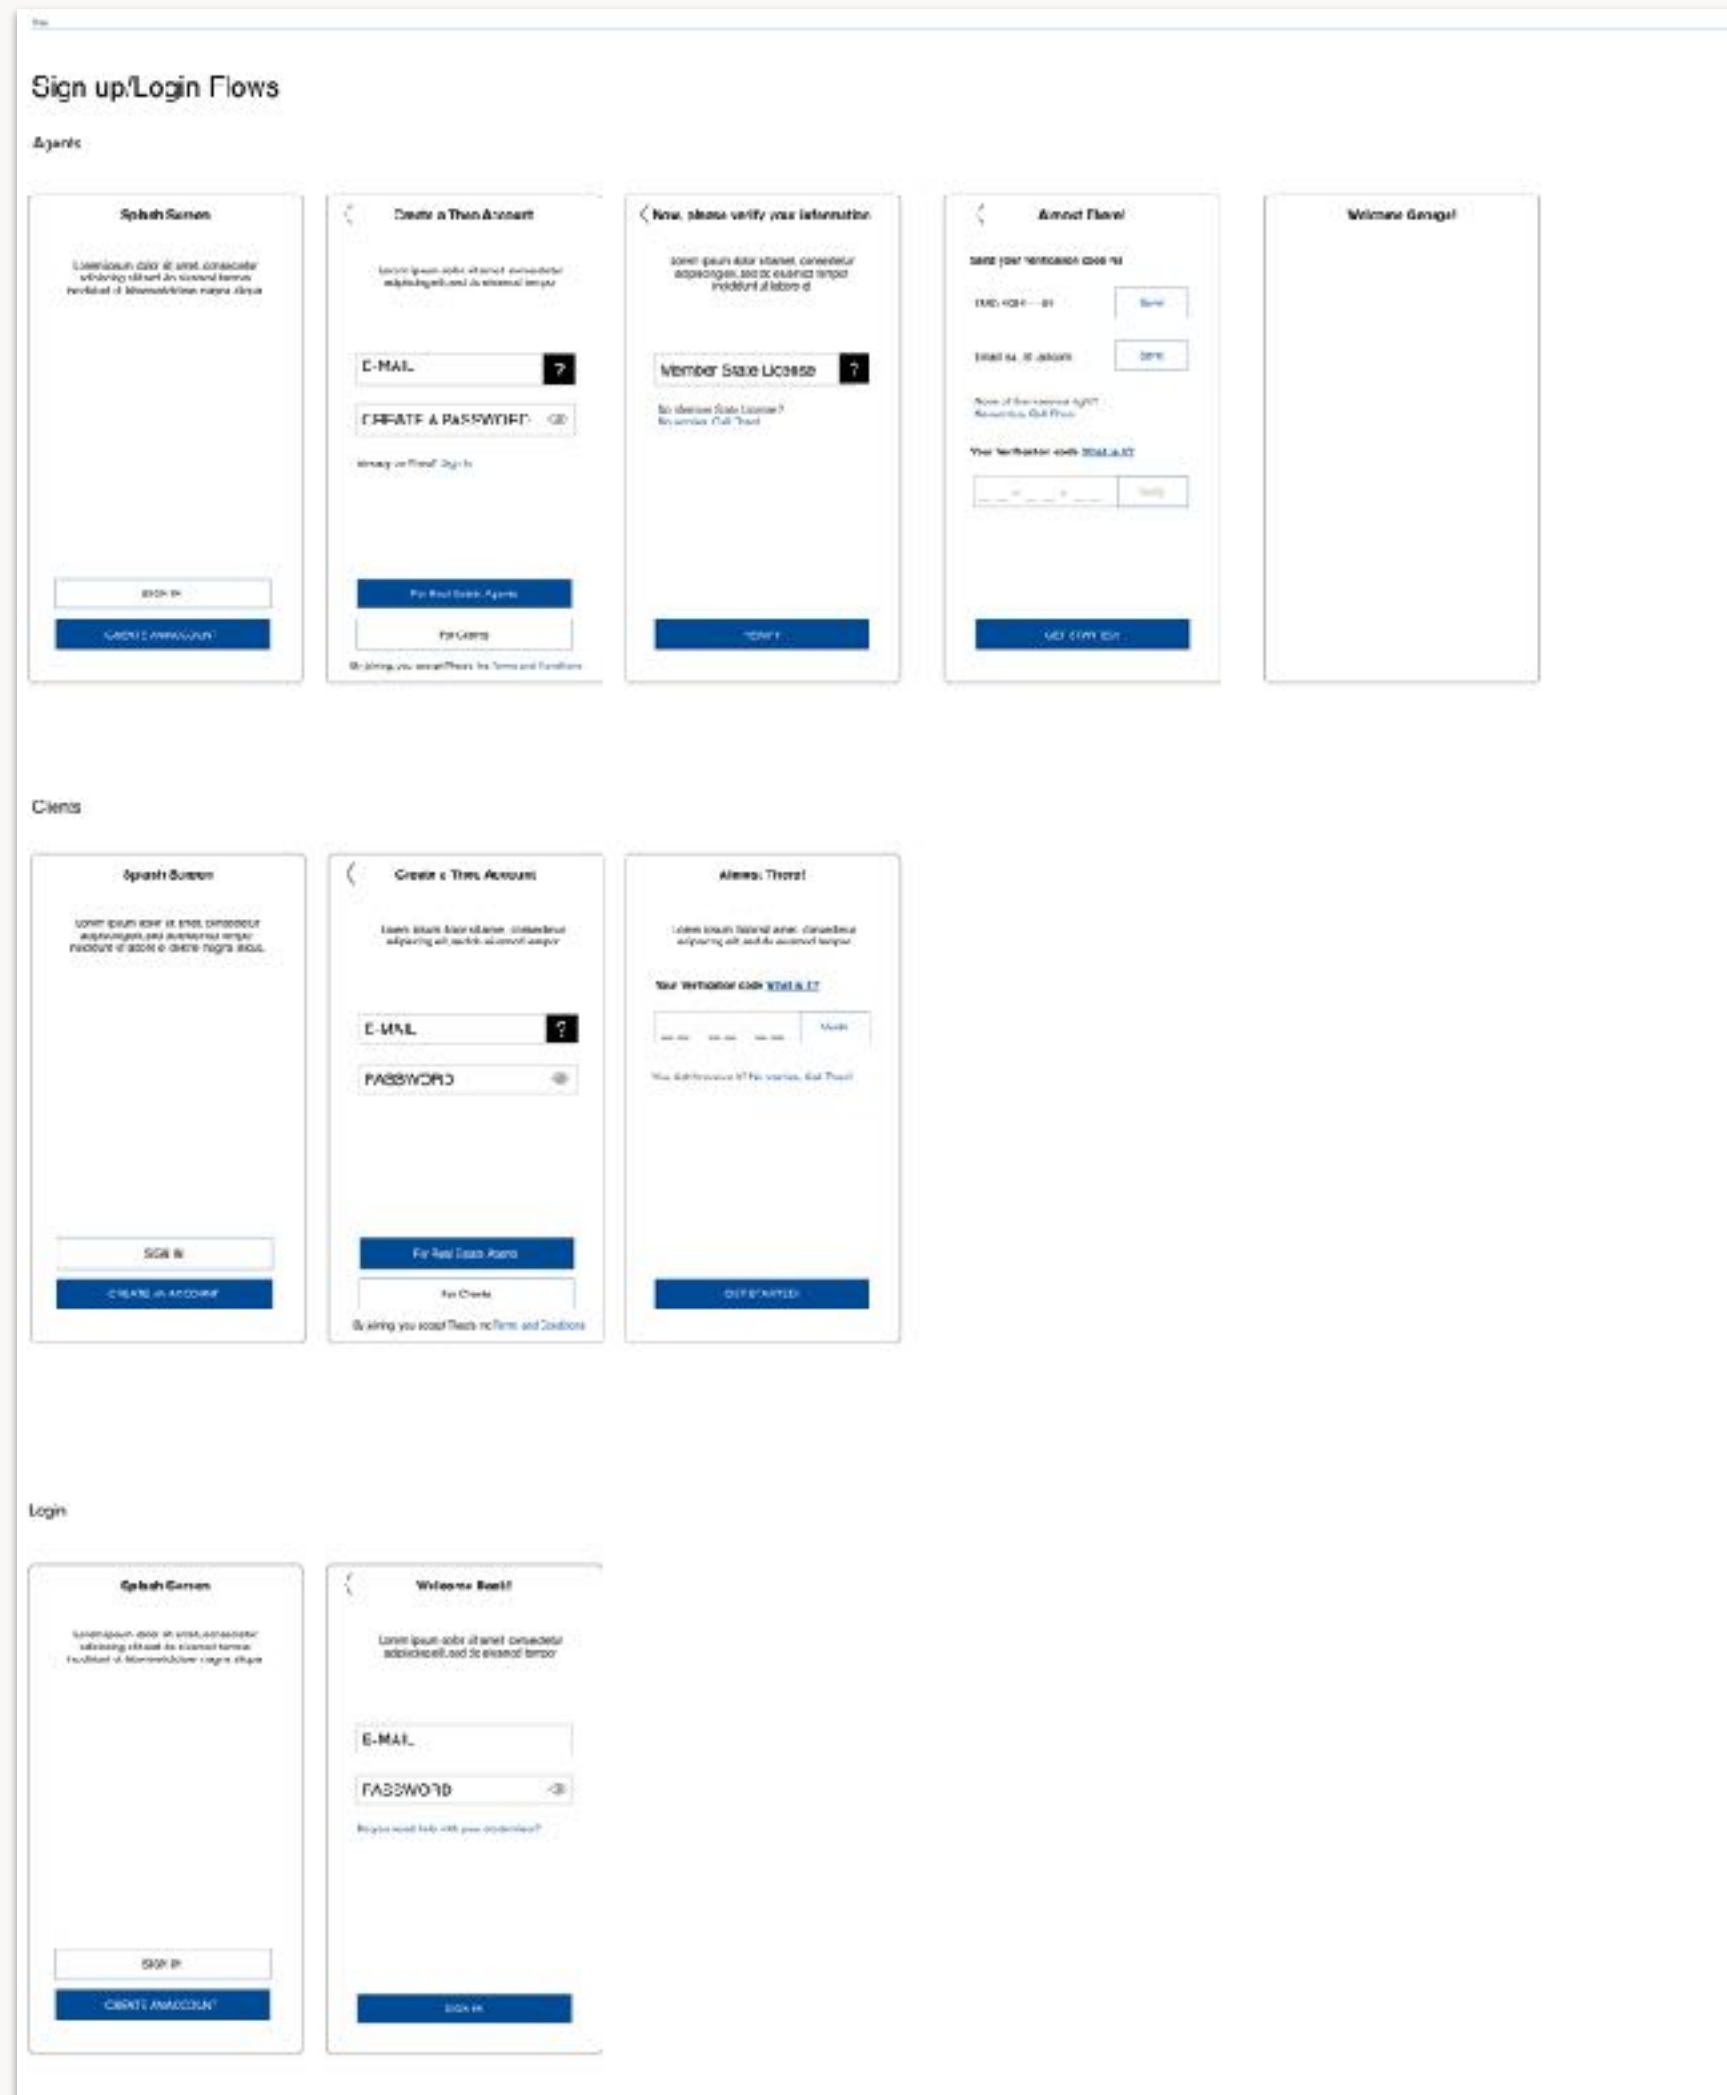

Personas

From the user research, I defined a set of personas

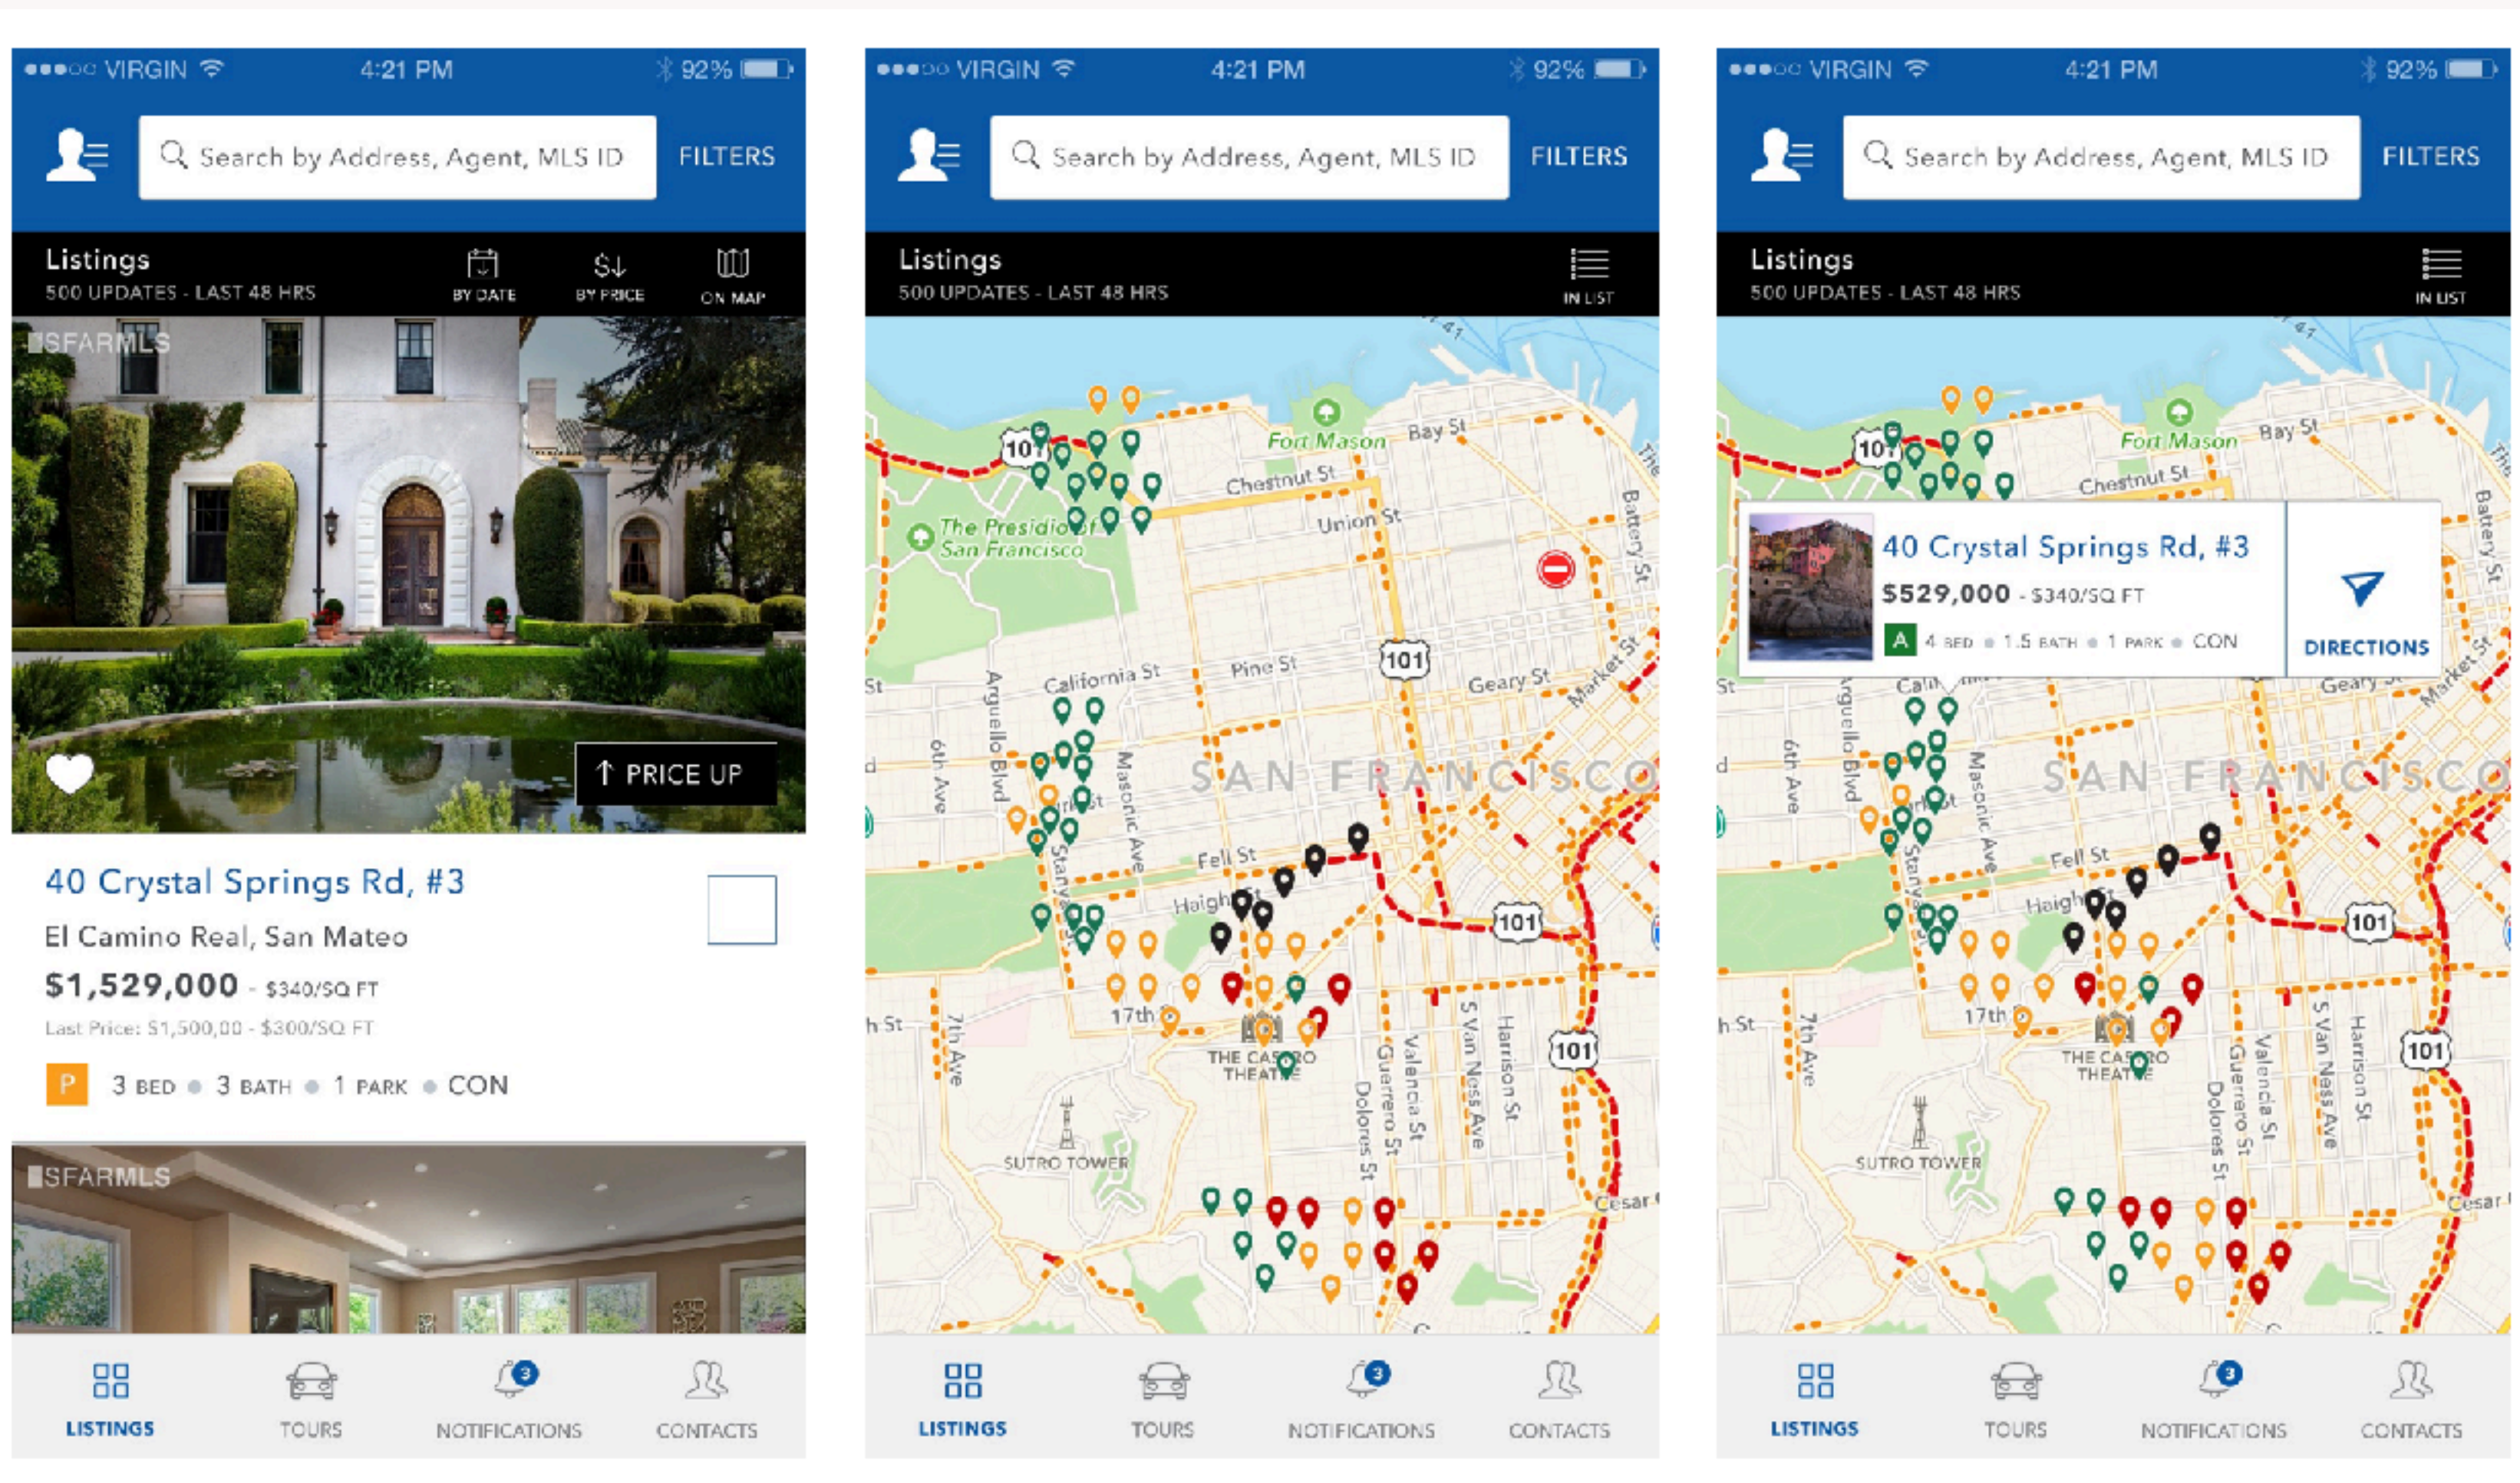

Flows

I was now able to identify the main flows

Flows Sketched

From the flows, I sketched the screens adding more details on interactions and messaging

Wireframes

I refined the wireframes and brought them on ProtoIO to be prototyped

VALIDATING

Testing on proto.io with users

Prototype on ProtoIO

When the prototype was ready, I tested the designed flows and the information architecture with users

Aggregated Insights

- Navigation

Audience insights

Navigating the app. Users didn't have any problem navigating the app and they could go to all the levels of the navigation seamless.

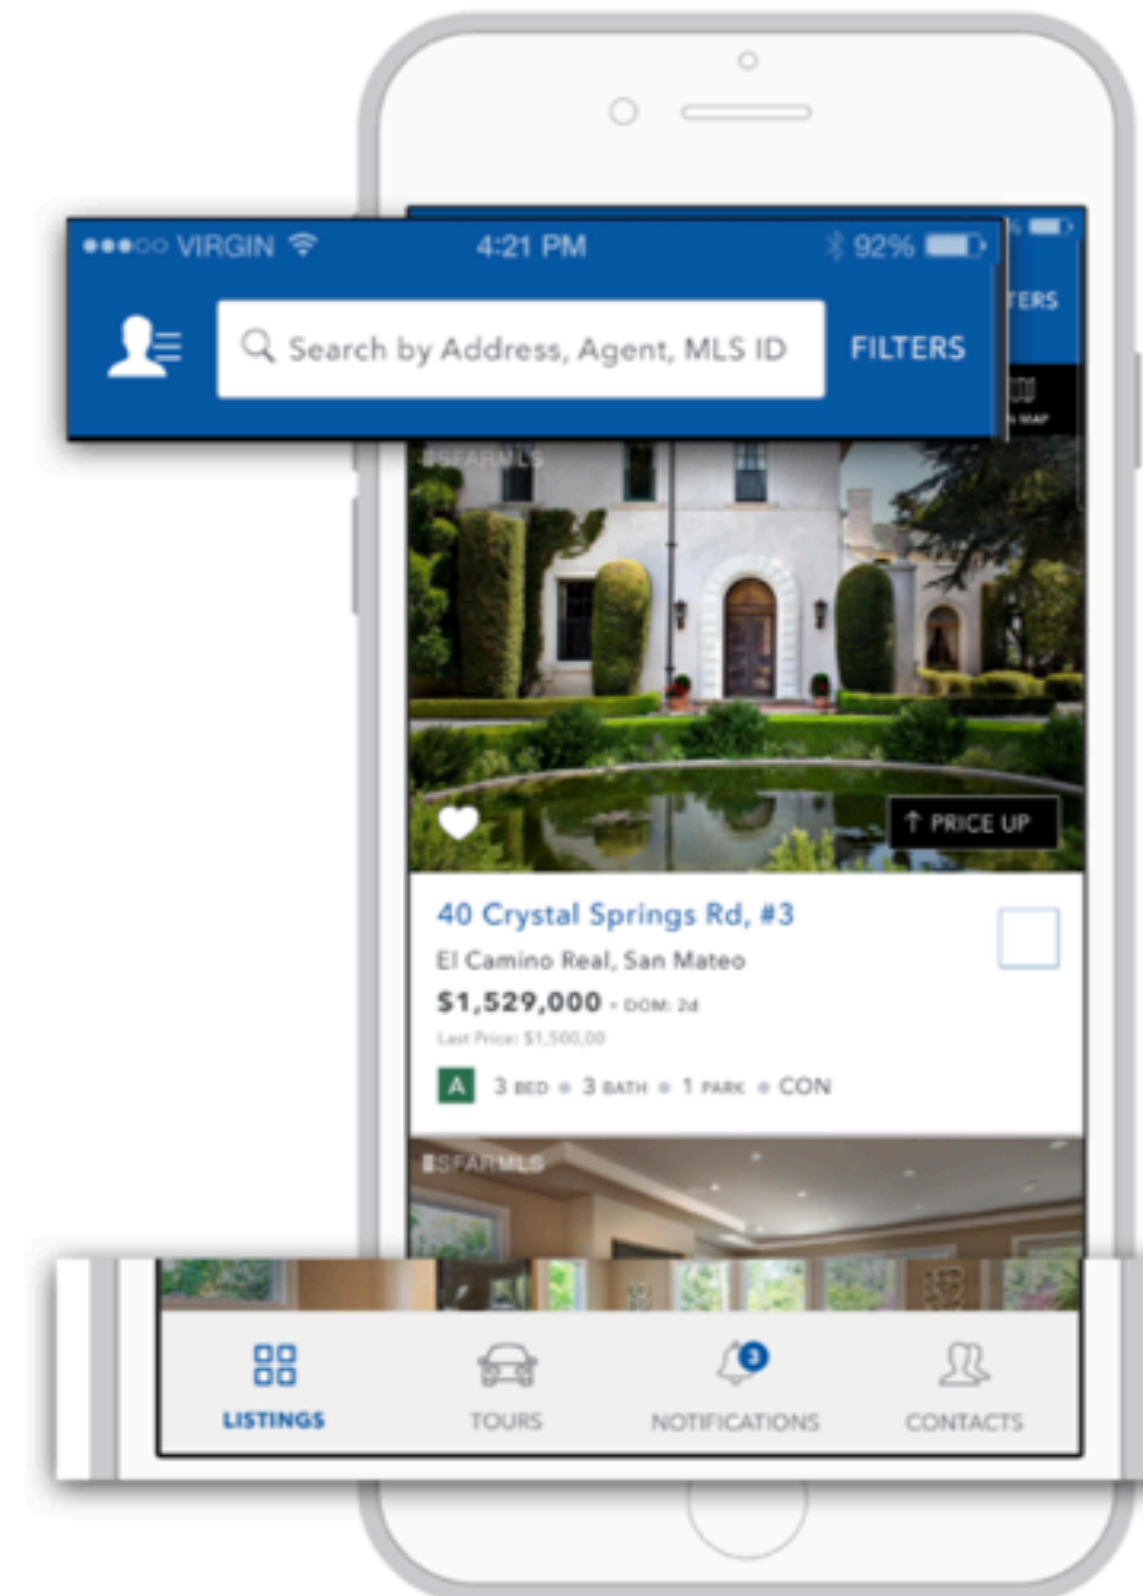

The Bottom bar. It was clear for all the users as well as the Drawer Menu.

Search. The search flow was clear and they had no problem navigating to the results and back to the Listing view. They also had no problem to find the search from anywhere in the app.

Filters. Users reached the filters section easily.

Actionable improvements

No concerns. It seems there are no major concerns to push for a change of the navigation.

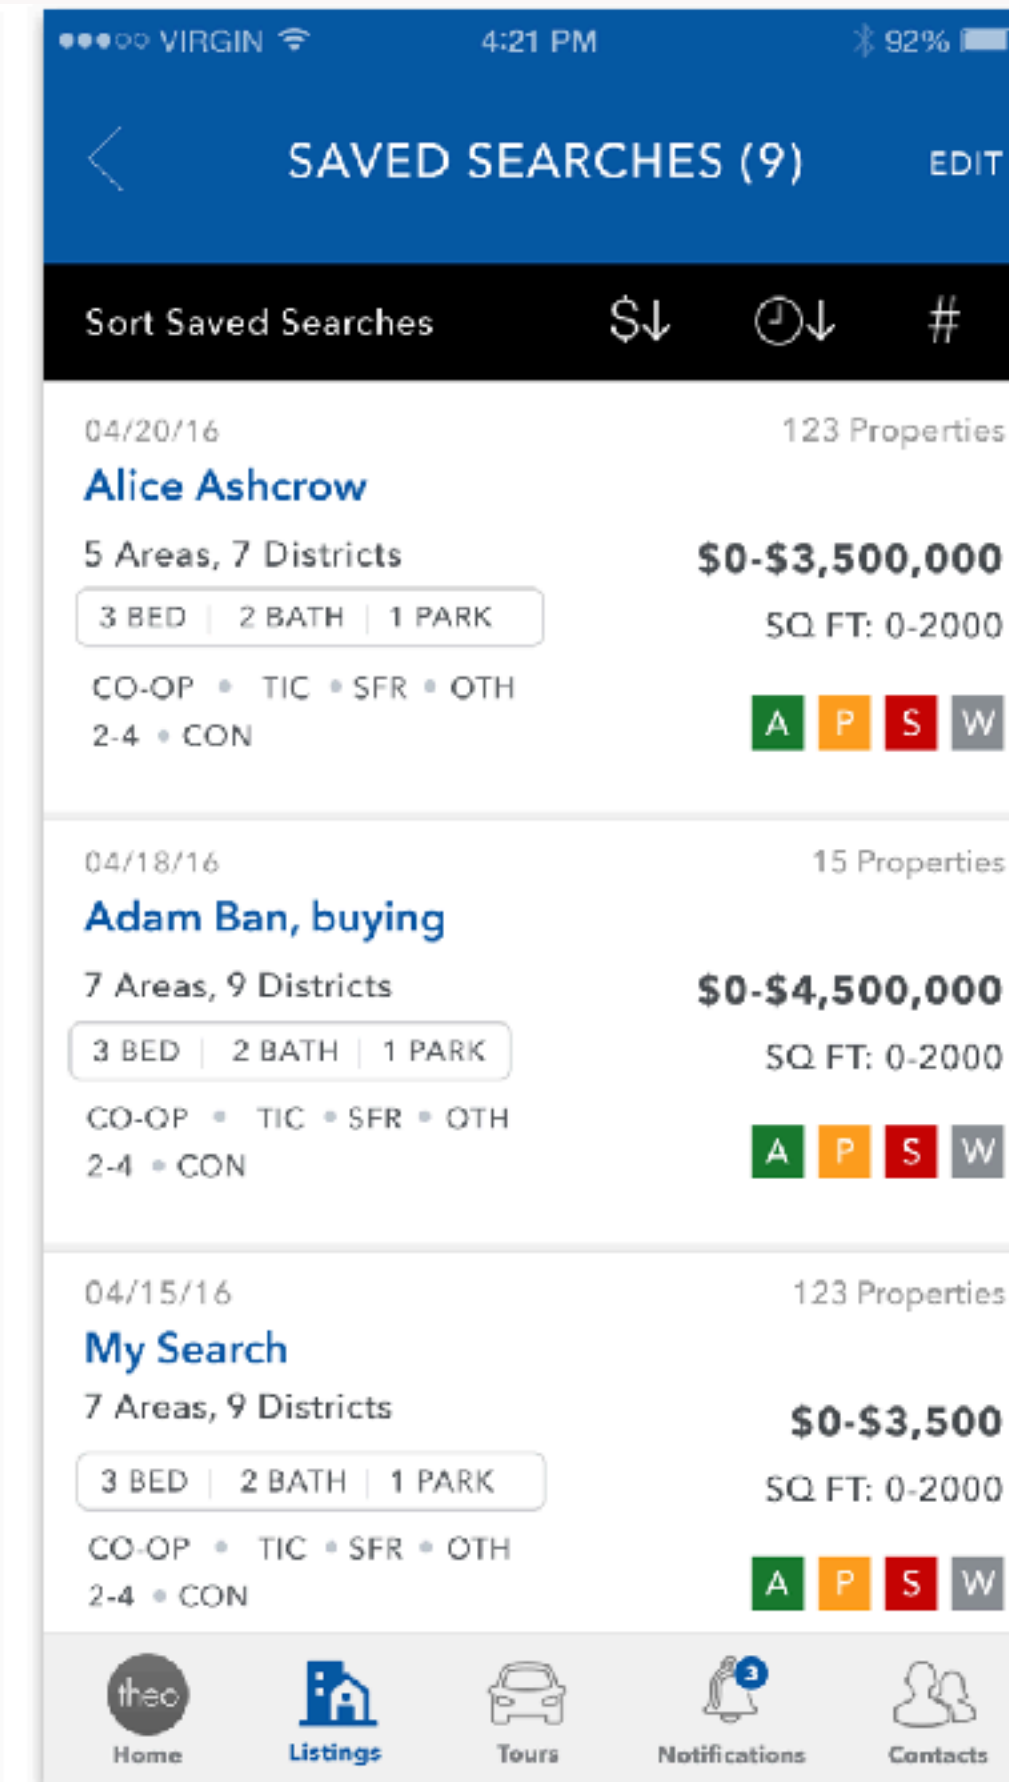

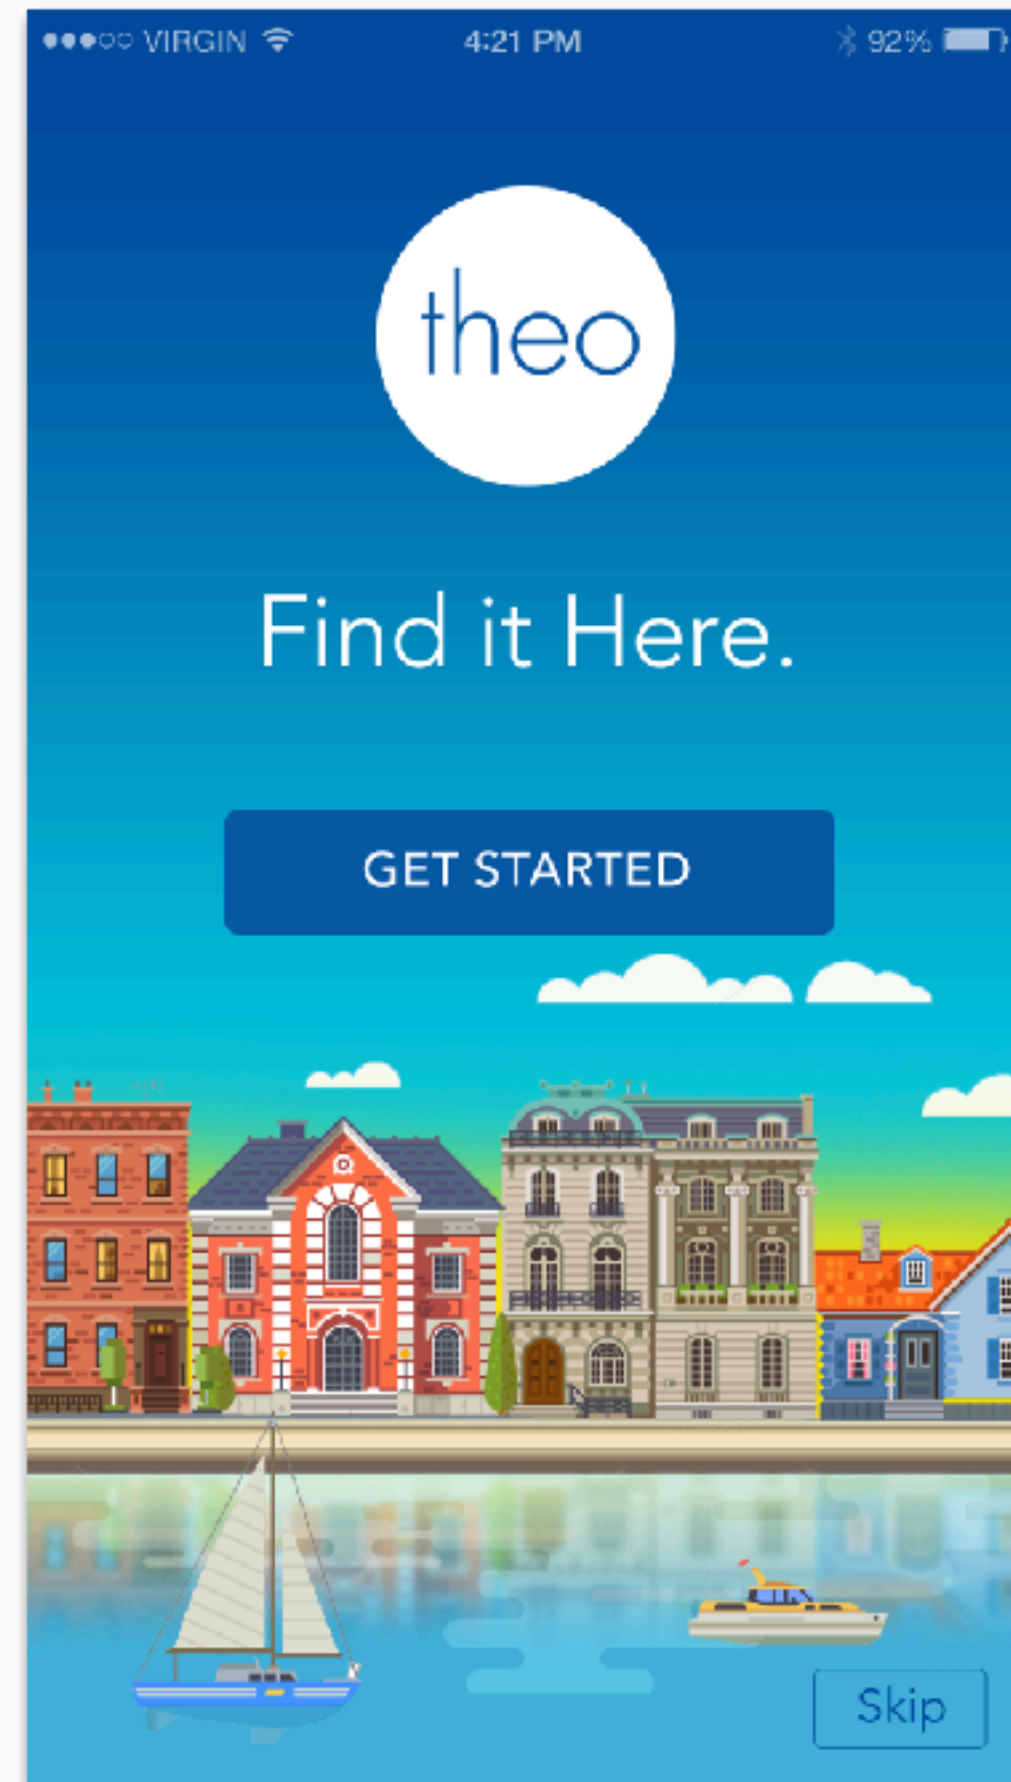

● Well done! ● Concerning ● Critical

Theo Inc. 2016. All rights reserved 3

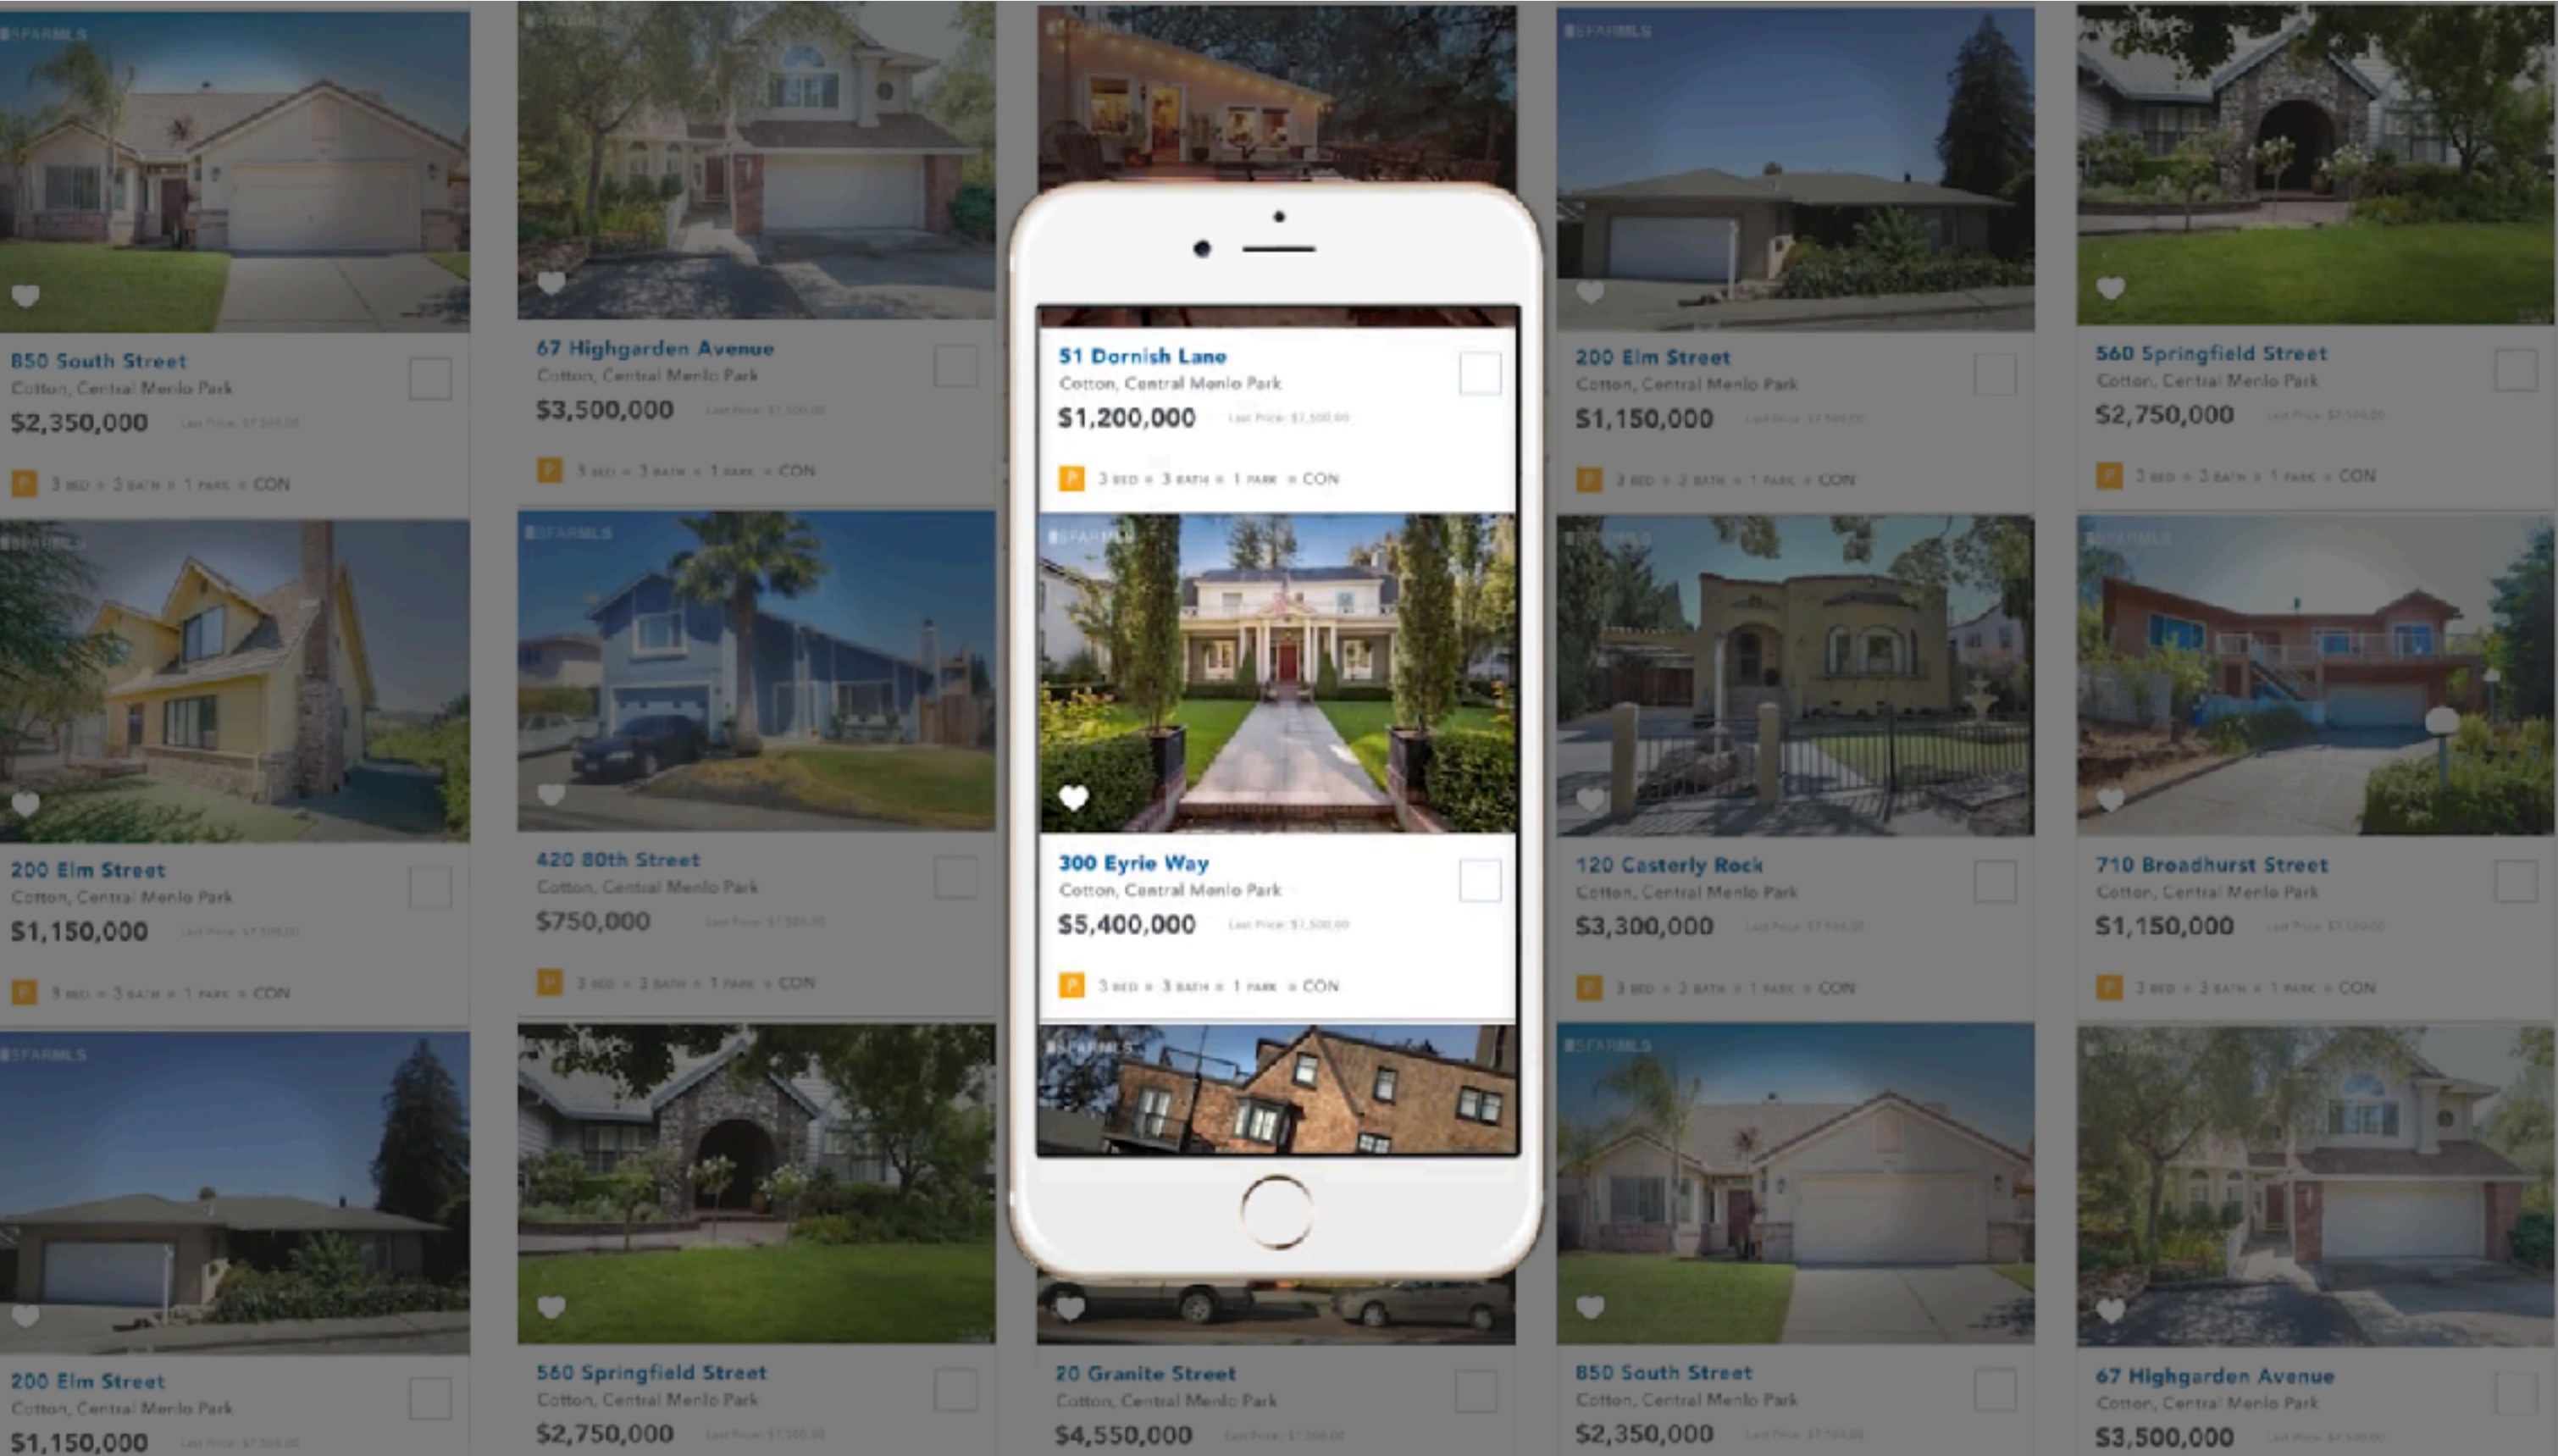

User testing

The report of the user tests included insights and advice for amends

From Wireframes to Pixel Perfect Designs

The wireframes were now ready to be built

Find the app in the Store!

The app is now available in the Apple Store

Altaterra

The Roof Windows Shop

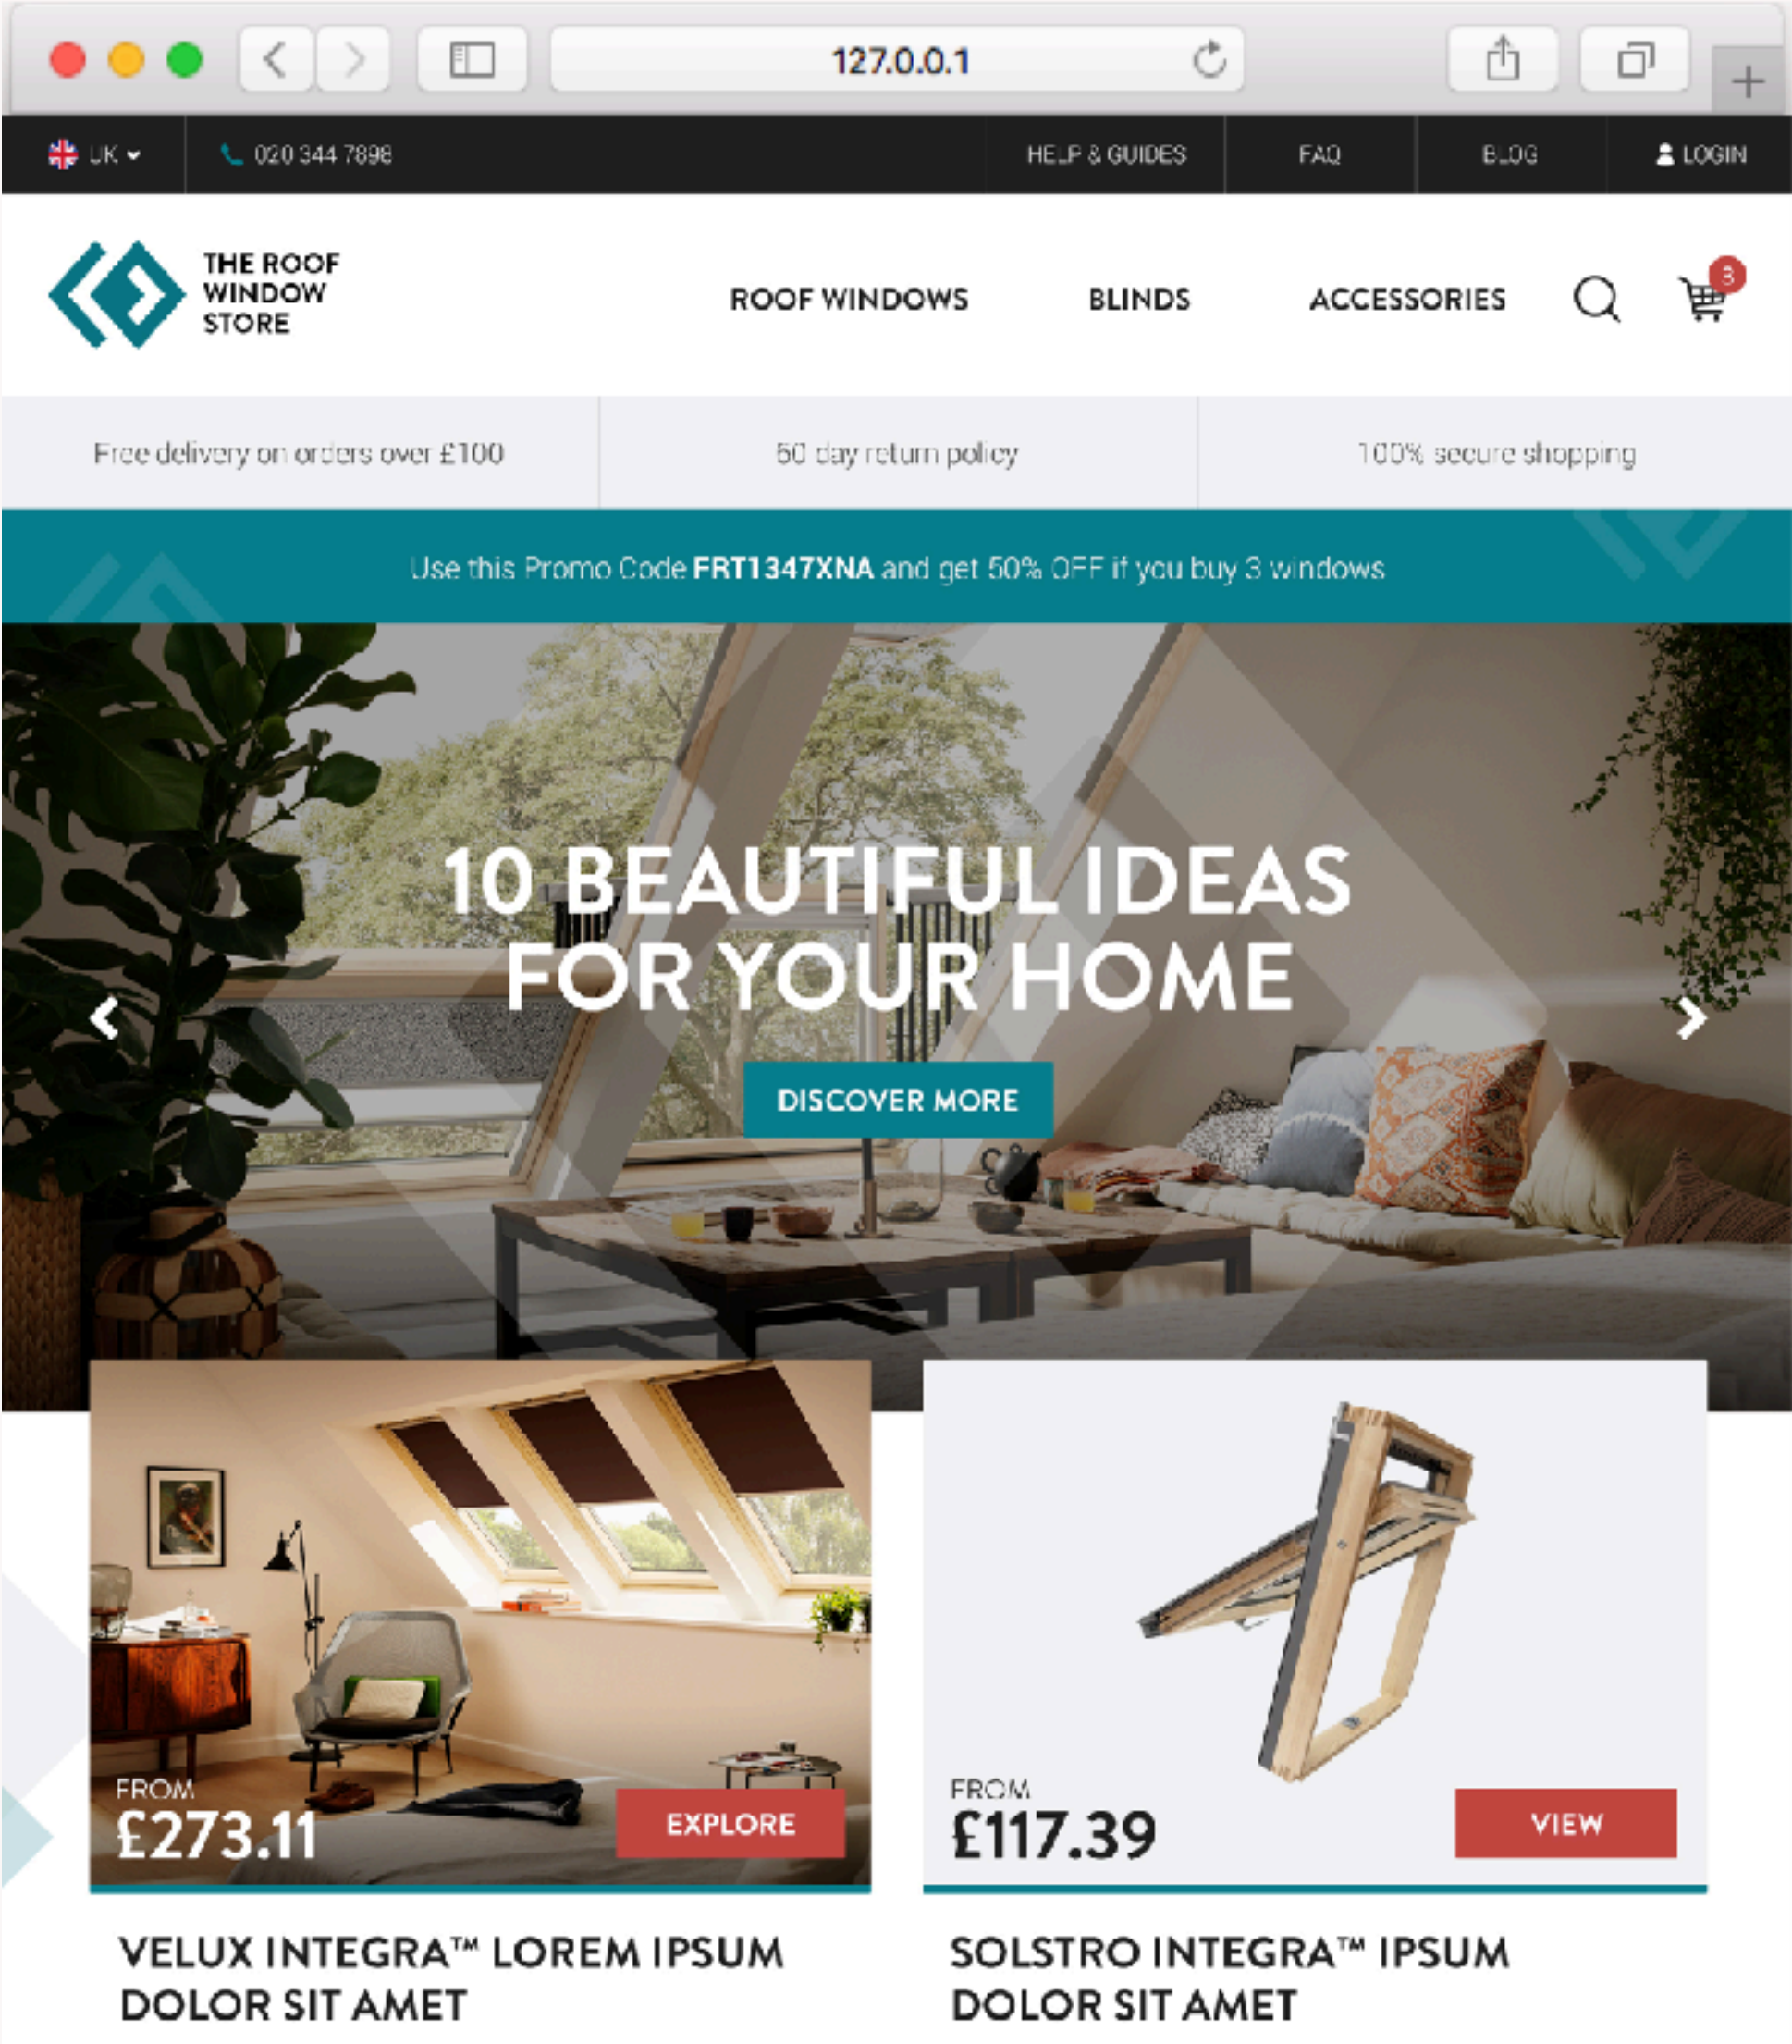

*Co-Designing an e-commerce website in a
multinational team*

Aqueduct in London

After three years of sunny-steady California, I wanted to get back to the Old Continent to be closer to our families.

In London I started to work in an agency called Aqueduct, where I led the team and our clients during the journey of their next digital success.

My first client there was Altaterra, an online roof windows shop. They wanted to redesign their website addressing international audiences.

Altaterra: the project

Kick Off

The Client: Altaterra, an online roof windows shop. They wanted to redesign their website addressing international audiences.

We identified roles and the scope of the project, taking into account the existing research and material that the client already had.

The biggest challenge was to ensure the stream of work across six different countries.

They had also the development team outsourced from two different consultancy firms.

Discover and Define

When I joined the project, this Client had a very insightful marketing research, a lot of insights on customer behaviours from their customer service.

I confirmed most of their knowledge with semistructured interviews to users, defined their User Universe, Personas and User Journeys.

Develop and Deliver

My Deliverables: Sketches, flows and annotated wireframes, that I use in client workshop where we co-design some of the area of the website.

I also prototyped (in Axure) most of the tasks that I user-tested.

When the development team had enough to show the overall design, I also made an audit of the website.

Steve Arnold

Small Building Co. Owner

Bio

Steve runs a small building company with his brother-in-law and a few specialist contractors that he pulls into each job as they are needed. Stays on the job end-to-end. Very much focused on quality as he knows that it's the finish and experience that his customers get that will give him his next job.

- 37 years' old
- Married
- Very knowledgeable and experienced
- Not a problem-solver
- Has a keen eye on detail
- Lives in a town

Plans renovations and new buildings

Experience Goals

- To find what he knows he needs, fast
- To be able to control most of the phases of the project (if not all)
- To find out about the shipment process
- To avoid delays and be sure to have all the information to be able to solve unexpected issues - either by calling CS or by himself

End Goals

- Wants to see specs to provide his customers the right replacement piece
- Wants to see the quality, the material and the benefits (i.e. insulation) of the windows
- Wants to find a provider without compromising quality
- He wants information on shipment and returns policies

Pain Points

- He can't easily find shipment, payment and returns policies
- He often uses his mobile phone to make orders too quickly, and had to return and perform returns
- He can't see how long it would take to get the product before committing

Core characteristics

Current tools usage

Trigger

- ✓ Day New - satisfied or money back
- ✓ Get new RW in 3 days
- ✓ Now Deal for you

Engagement

"I know what I'm doing, I just need to know that everything will go as planned."

Source: Steve Townsend

Angela

Young Homeowner

Bio

Expecting a baby in 6 months. She is a savvy shopper and likes researching, but quality is always very important to her. She does not do as well as work on weekends when there are guests, but will tell people about the risk of death at any opportunity. She needs to create a spare bedroom in their flat for her parents to stay in when the baby is born. The first window will be bought by her, inspired by the builder.

- 29 years' old
- Married
- Collects pictures on Pinterest
- Good decision-maker
- Lives in a city

Needs to remodel

Experience Goals

- To be inspired about the design and the materials
- To take an informed decision, together with her husband, about the materials and functionalities she likes
- To see she made the right choice for her family (safe, safe and high quality)

End Goals

- Wants to buy 2 big roof windows
- Wants the windows to be safe, easy to use and solid
- Wants to find a good deal without compromising quality
- After the purchase, she wants to know that she can count on "the site" Customer Service

Pain Points

- She doesn't know the technical terms or what technical details are required
- She can't share easily what she has found on the website
- She finds it very hard to compare between different bundles
- She doesn't know what accessories or add-ons she needs

Core characteristics

Current tools usage

Trigger

- ✓ Buy the Right Roof Window
- ✓ Compare the offers
- ✓ New Deal for you

Engagement

"I want to buy the right roof window at the right price so to have a comfortable and safe room for my parents"

Aqueduct

Source: Steve Townsend

Alice Brooks

Architect

Bio

Alice is a brilliant young architect. She's always researching new solutions and ideas, browsing the most up-to-date print and online magazines, going to conferences and following the best architects on the market through blogs and social media. Some of her clients are business men or women that want beautiful efficient solutions for their home, but have no time, no experience, for researching what they are dreaming of. Alice puts together the best solutions to meet her clients' requirements and the market offers.

- 32 years' old
- Single
- Understands customer desires
- Style and emotions are key to her work

Designs renovations and new interiors

Experience Goals

- To be aware of new interesting solutions
- To view benefits, especially in terms of space and material and price
- To share proposals with clients and other professionals
- To avoid delays and plans for possible problems in advance

End Goals

- Wants to provide clients with the best solution on the market
- Wants to be sure that prices and requirements meet clients' needs
- Wants her clients to feel she has added value to their home
- Wants to be recognized as a great professional

Pain Points

- Pictures are not explanatory of the final effect
- It's hard to see all the specs
- Sharing is not intuitive enough
- The style of the website doesn't reflect her professionalism or her aesthetic standards
- She's afraid that too much information would scare her clients

Core characteristics

Current tools usage

Trigger

- ✓ Beautiful and smart solutions
- ✓ Be friendly
- ✓ Quickly that shares out

Engagement

"I want to create vibrant energy efficient spaces for my stylish clients"

Aqueduct

Source: Steve Townsend

Arthur and Lotte

Elder couple DIY enthusiast

Bio

Arthur and Lotte are a couple in their early 80s. Both are retired and love doing activities like DIY and gardening, and are comfortable making small works in their house, especially Arthur. They live in a bungalow which has a large left conversion with a dormer and no to garble. There are several windows in the conversion. They did the conversion a few years ago and it's looking a bit first now, so they want to do a refresh, replacing one window and getting some new blinds and whatever else might inspire them.

- 55-60 years' old
- Married
- Moderately knowledgeable and experienced
- Like DIY
- Are practical
- Live by the sea

Renovation

Experience Goals

- To be guided in finding what they need
- To be able to change their mind easily
- To be sure that they do it by themselves
- To share the purchase process with friends and family
- To avoid hassles and be reassured about the purchase

End Goals

- Wants to buy for remodeling, once every 15-20 years
- Wants to feel they bought the right item
- Wants to live in a safe and comfortable environment
- Wants to get a quote and compare between options

Pain Points

- Too much content - it's difficult to see whether these are things they should be aware of
- Can't print or share easily anything
- It's difficult to understand what are the specs and requirements they need to match
- Some language is too technical and descriptions are not clear enough

Core characteristics

Current tools usage

Trigger

- ✓ Day New - satisfied or money back
- ✓ Easy to install
- ✓ Quality that last

Engagement

"I really enjoy doing some work to the house from time to time, I'm keen to learn..."

Personas

From the existing material on their audiences, I was able to define four personas

Aqueduct

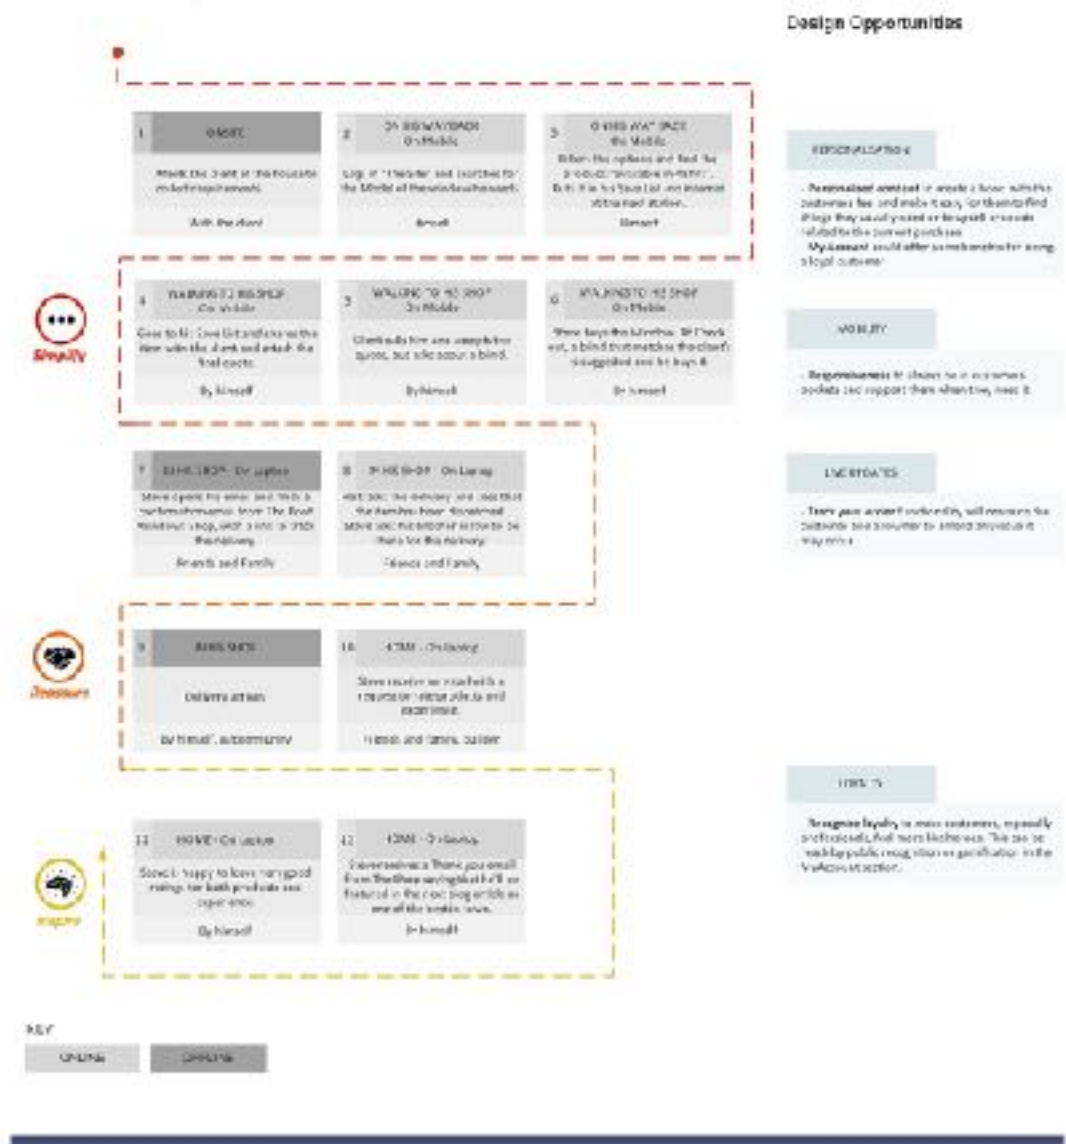

Credit: Sara Harsanyi

"I know what I'm doing, I just need to know that everything will go as planned."

Steve has been asked to do some research to be a "fun" aspect that a customer has bought. As part of the job he's doing, Steve knows exactly how to do it, he needs to know how to make it work. The old window is broken, and needs replacing.

Steve's Journey

Aqueduct

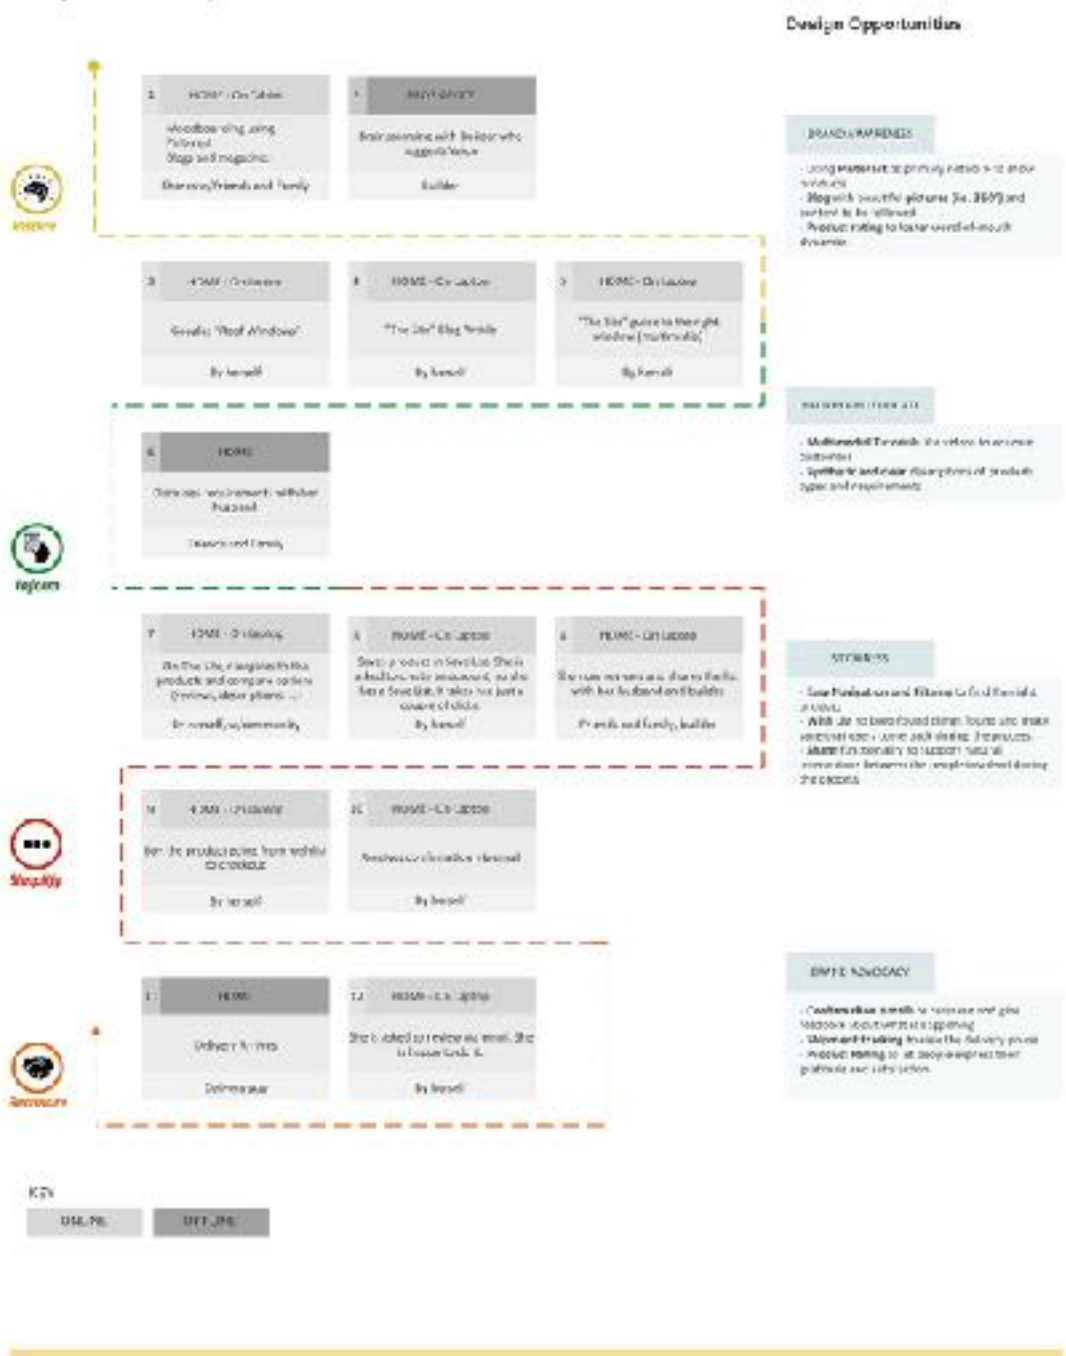

Credit: Sara Harsanyi

"I want to buy the right roof window at the right price so to have a comfortable and safe room for my parents."

Angela is expecting a baby in 2 months, they need to add a bedroom in the loft for the grandparents. There is a baby on the way, so money is tight. She is looking for a way to get the room ready. She needs to create a safe room in the loft. The roof window will be bought by her, installed by the father.

Angela's Journey

Aqueduct

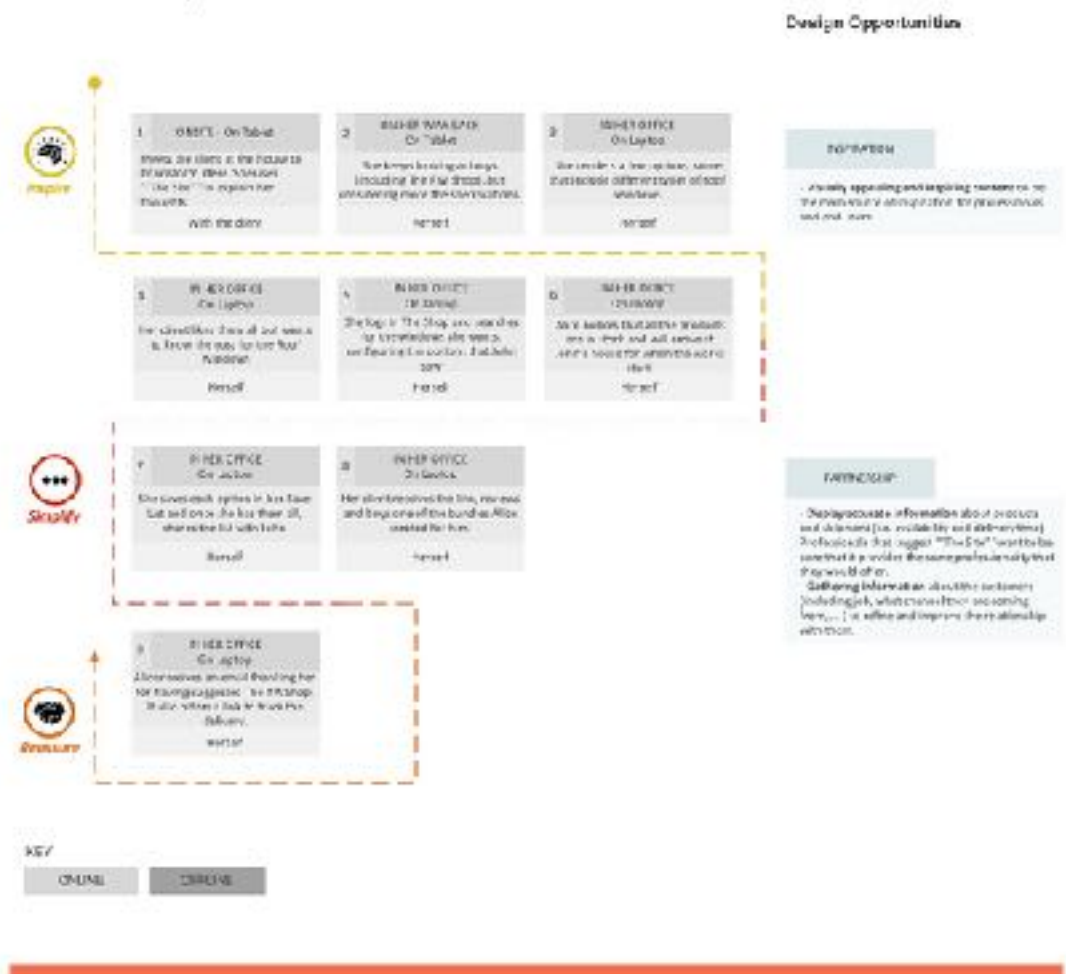

Credit: Sara Harsanyi

"I want to create vibrant energy efficient spaces for my stylish clients."

Alice's client - Steve needs to remodel his loft and he's willing to spend money on high end energy efficiency. Steve needs to create a safe room in the loft. The roof window will be bought by her, installed by the father.

Alice's Journey

Aqueduct

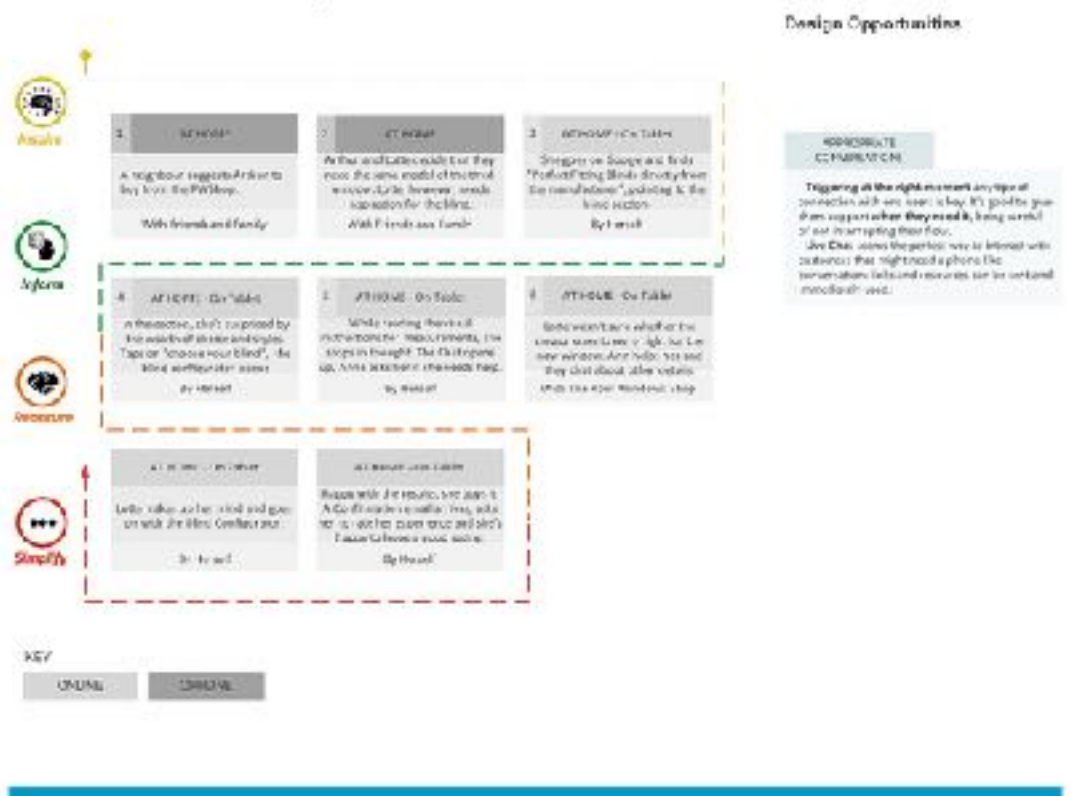

Credit: Sara Harsanyi

"I really enjoy doing some work to the house from time to time. I know more or less how to do it and I'm willing to learn."

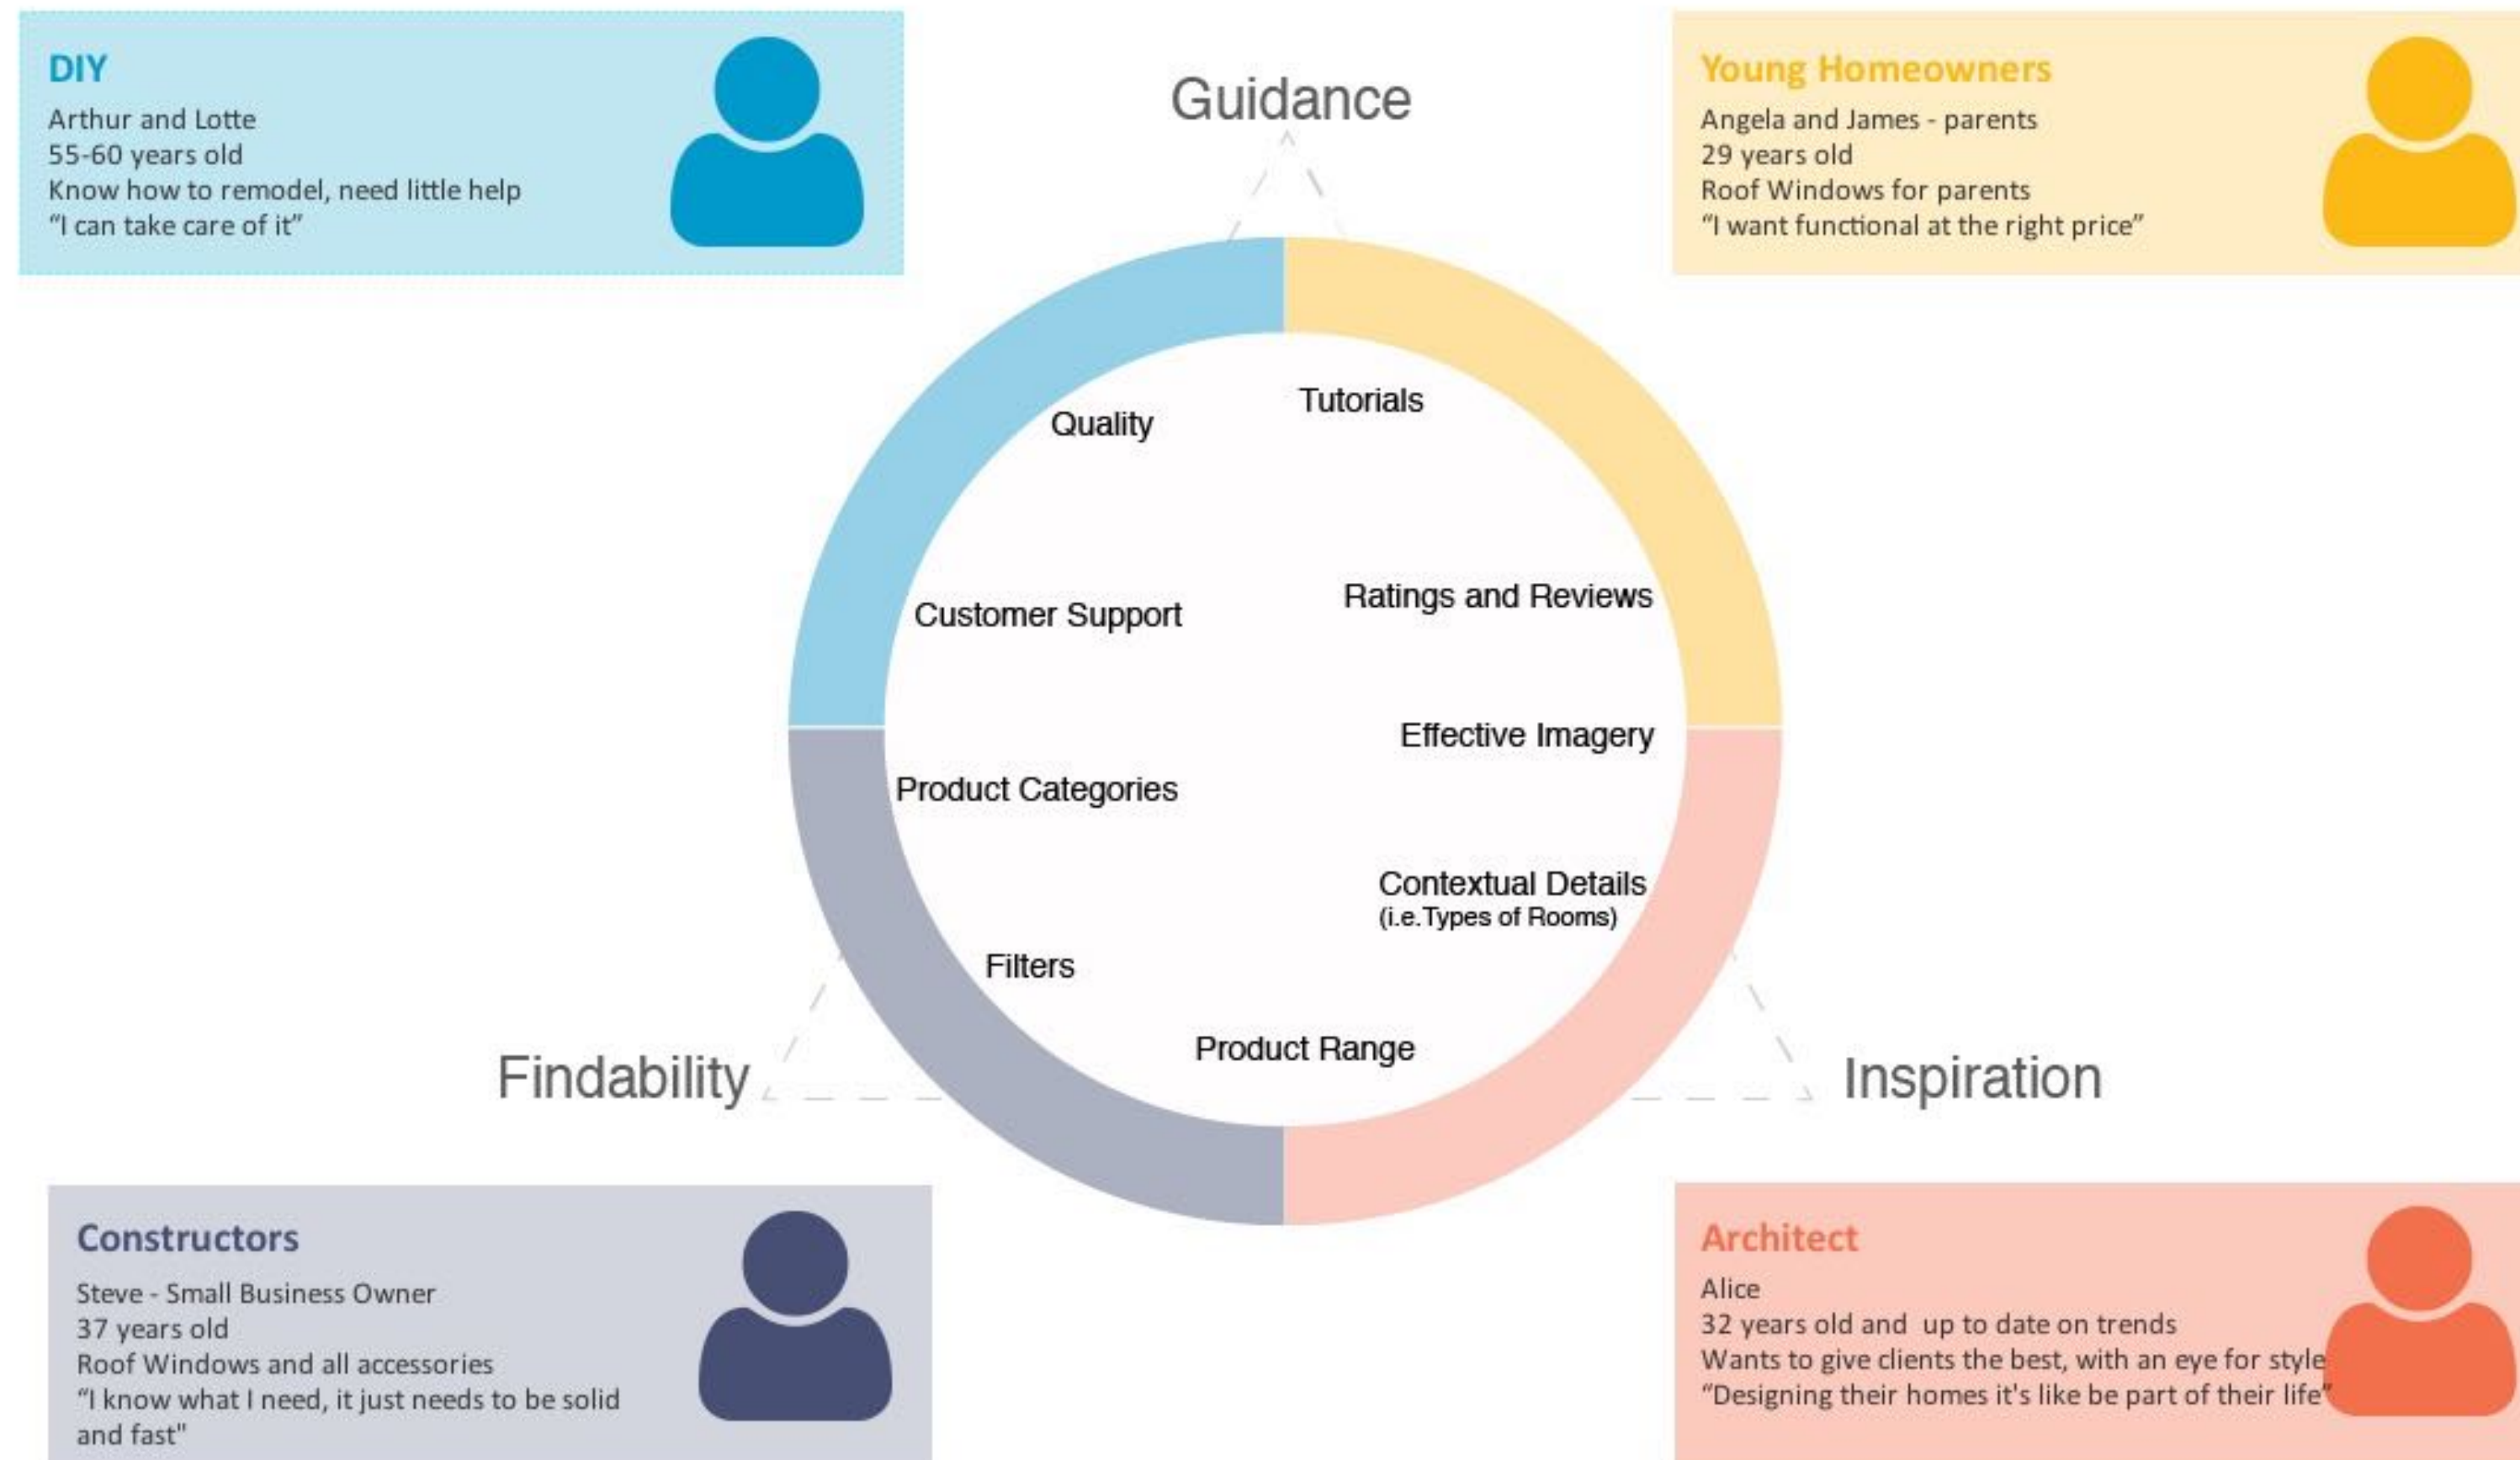

Arthur and Lotte are a couple in their early 50s. Both are retired and living in a large house with a large loft conversion. There is a window in the conversion. They are the conversion is a new window. They are a bit of a mess as they want to do a new job.

Arthur and Lotte's Journey

User Journeys

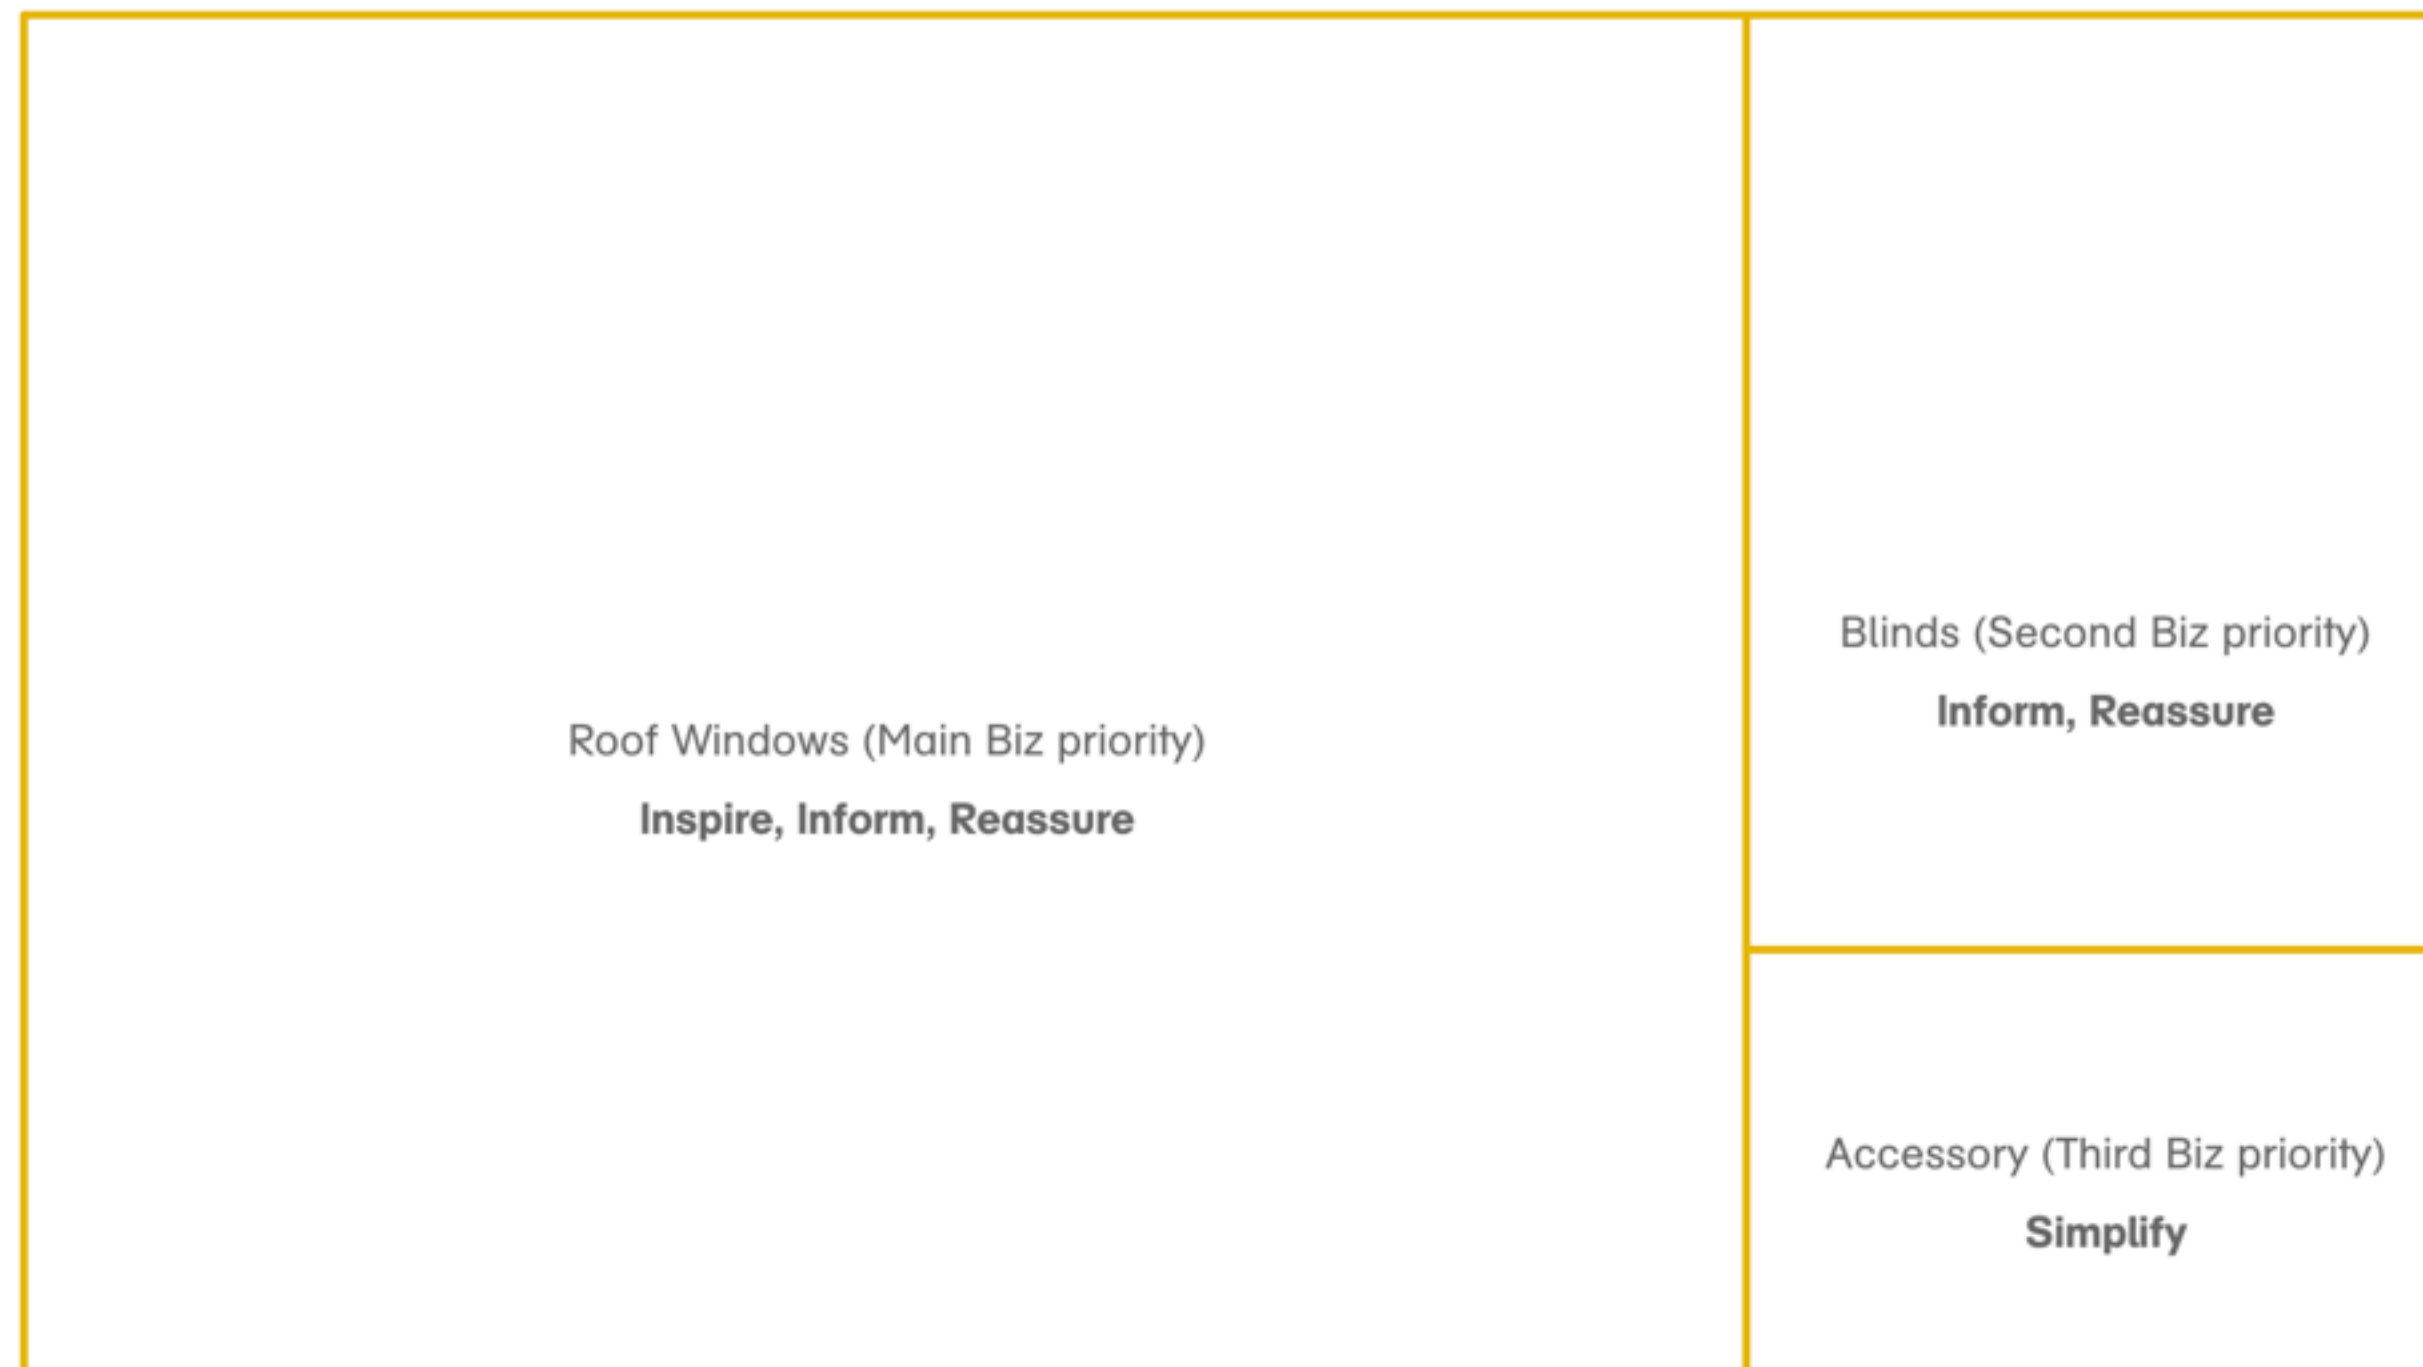

I defined the user journeys and the design opportunities for each type of users.

The Users Universe

Each Persona was mapped against the needs that they expressed

Product findability

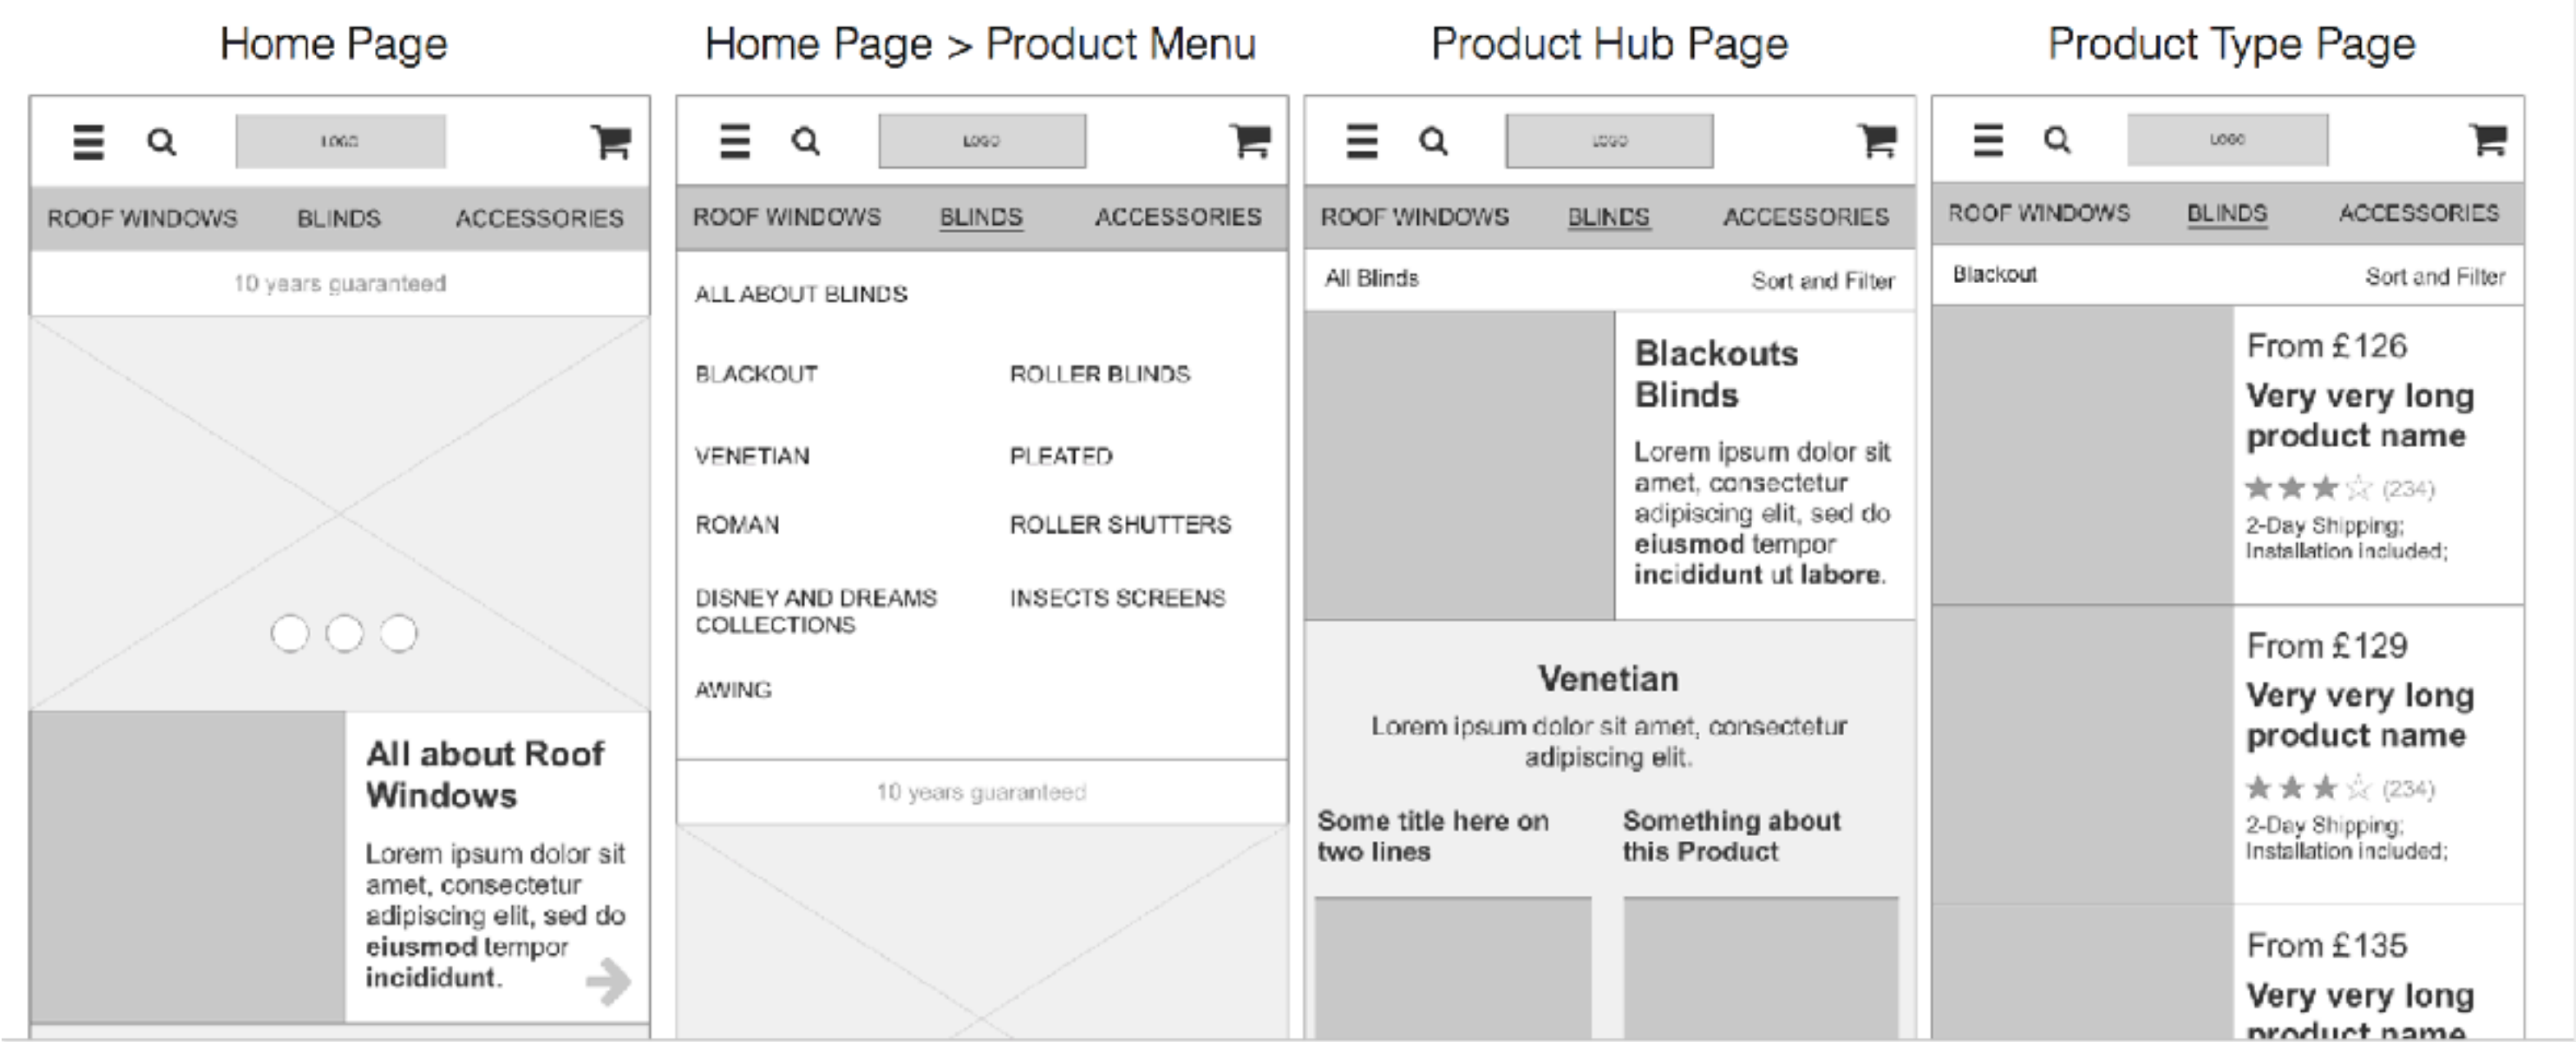

I worked on the information architecture, advising for a product naming strategy that reflected the users mindset.

Site Map

I redefined the Information Architecture, reflecting the overall content strategy

Megamenu: a tradeoff

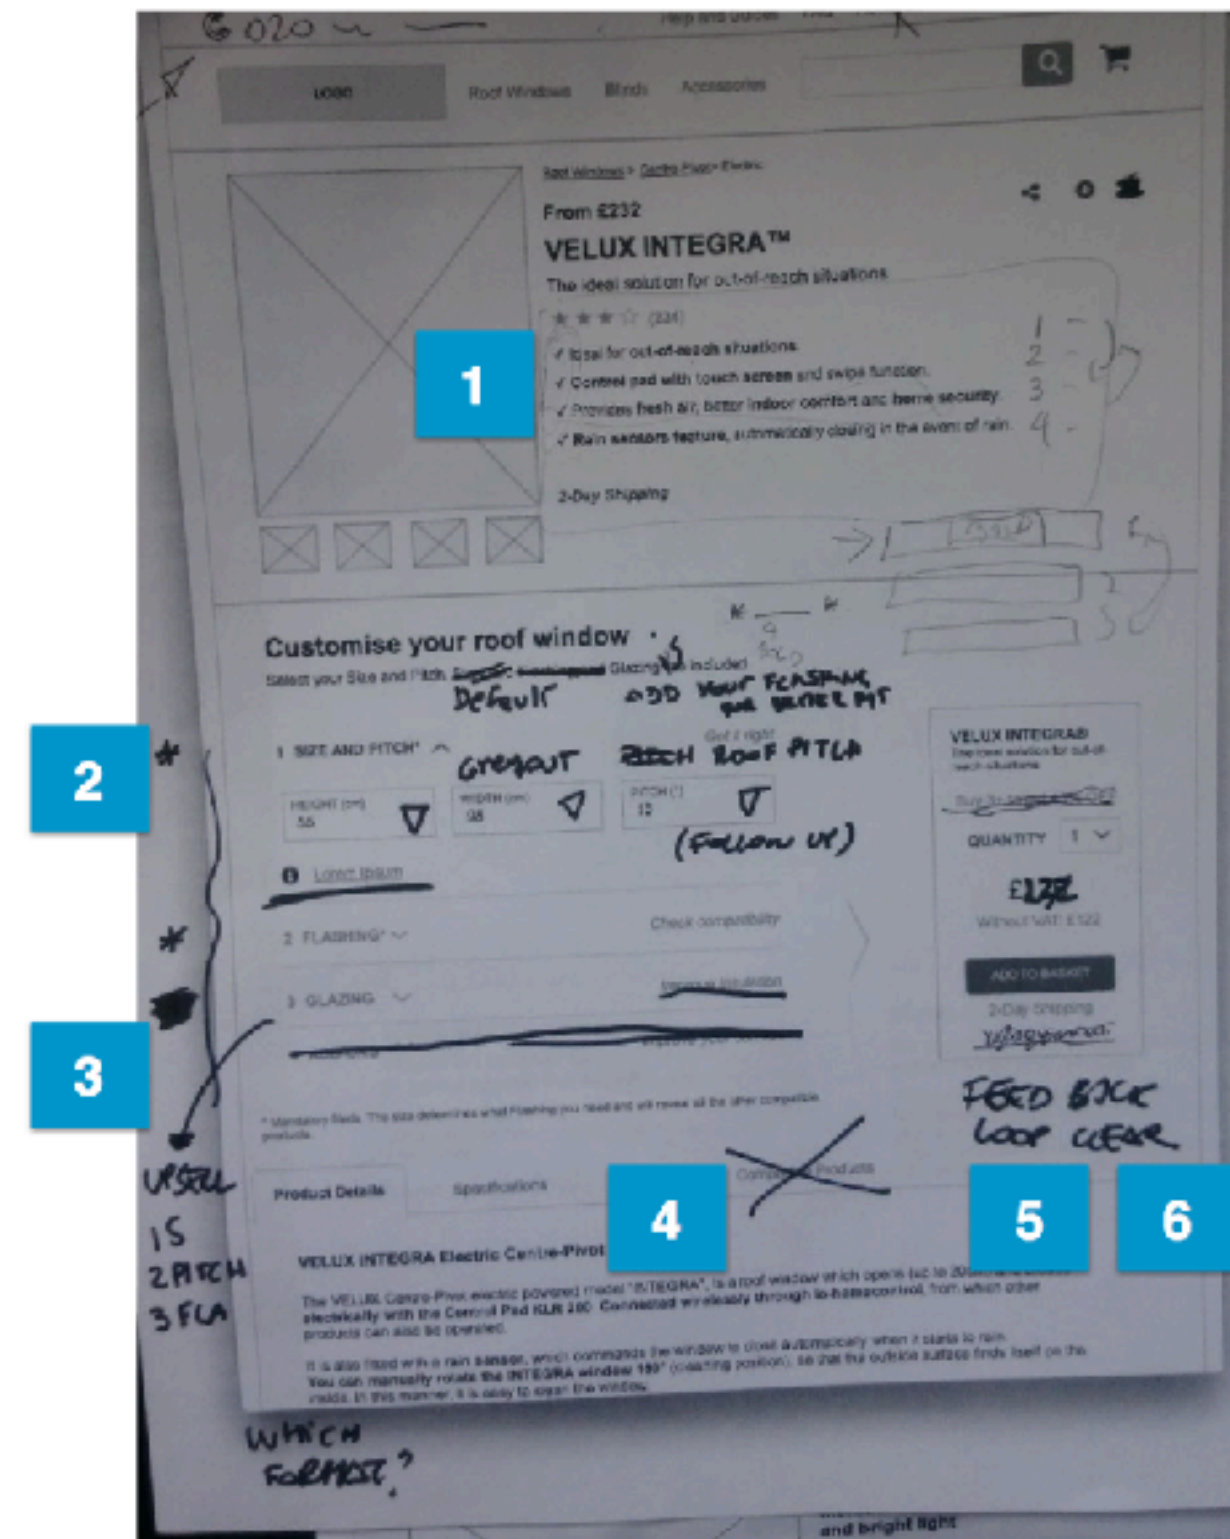

Megamenu Mania

Using a mobile first approach I layout the information defining the experience on mobile and desktop

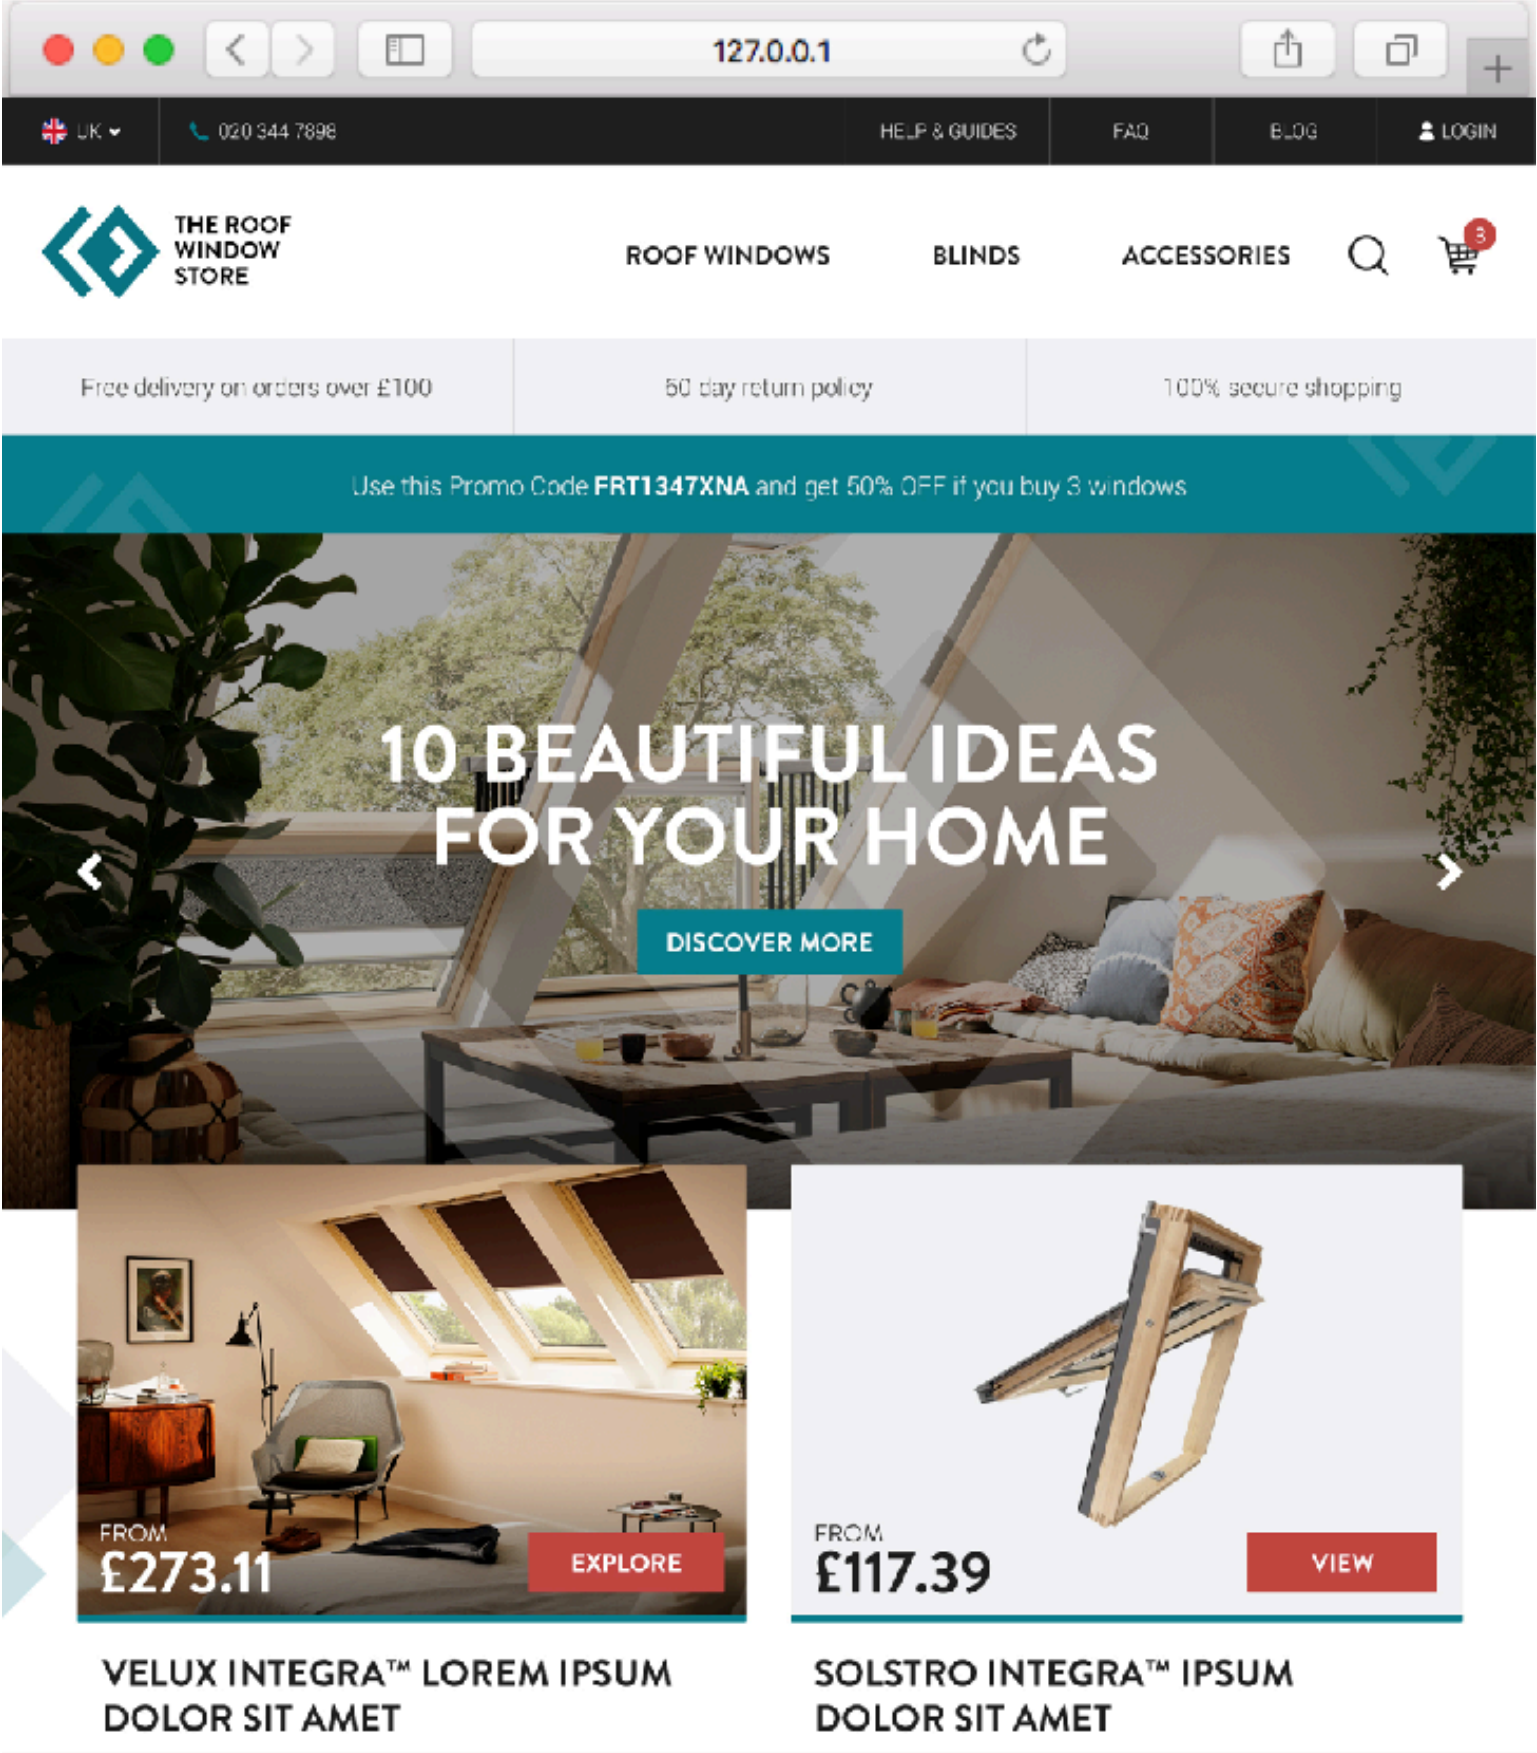

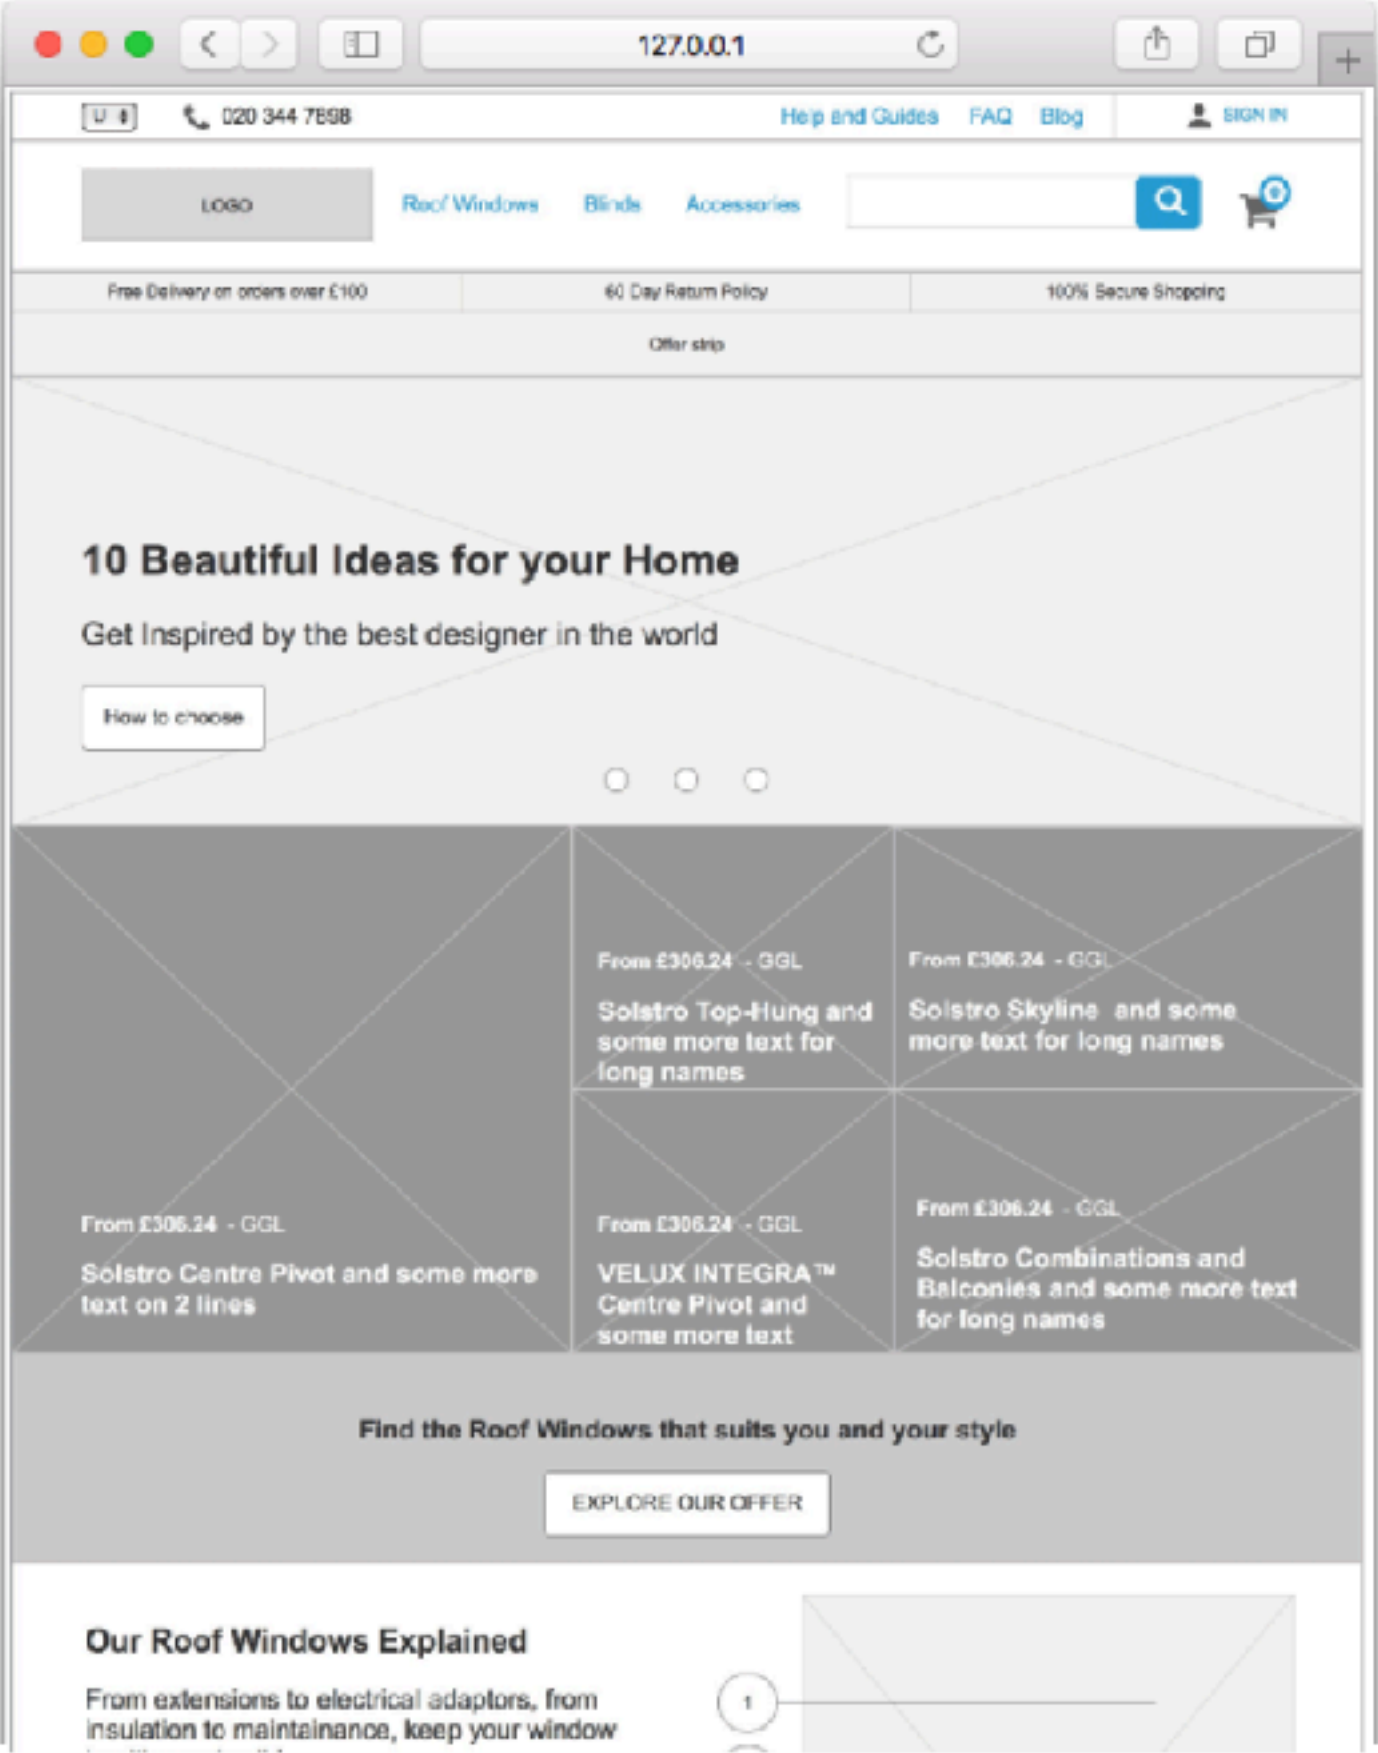

Product Page

- 1 Defined how many bullet points (from 3 to 5). Anchor to Specs
- 2 Height and Width in dropdown (height will filter the available widths)
- 3 Remove Add-ons and put Roof Pitch on its own. Pitch options need images. Remove Roof Pitch.
- 4 Remove Compatible products
- 5 Add link to shipment details.
- 5 Investigate price look and feel for when offers and discounts are on.

Co-Creation

I organised and led workshops with the Client and involved them in the design phase

Personas and User Journeys

Once the wireframes were good enough I prototyped and tested the flows with the users

Listing Page

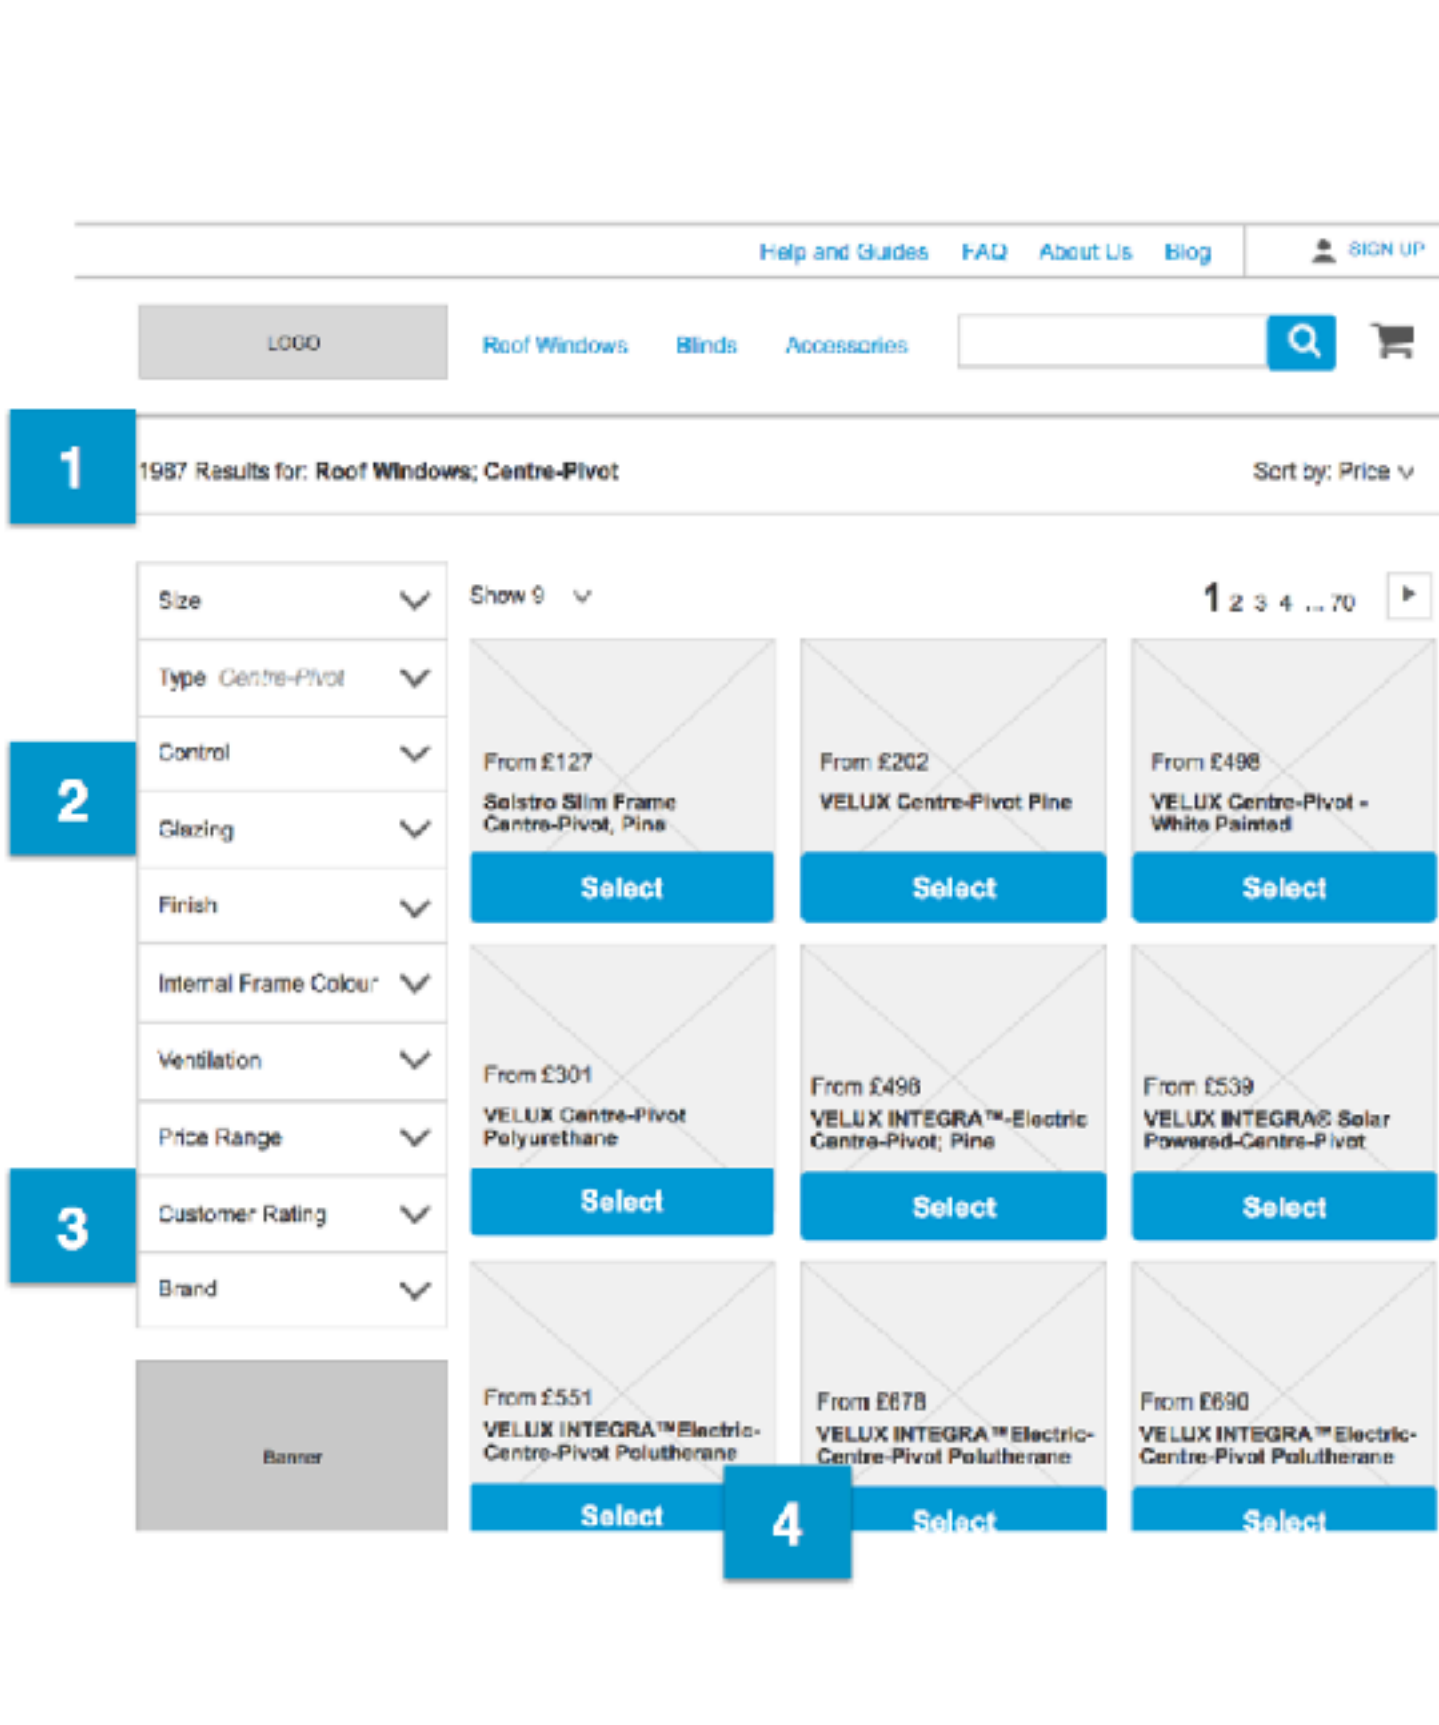

- 1

When users land on this page they find the breadcrumb which gives them confirmation about the product they were looking for.
- 2

Then they go through the filters. It makes sense for them to have a type already selected.
Labels need to be more precise and consider non-native English speakers (i.e. Finish should be Frame Finish; control could be).
- 3

Customer rating is not important for making a decision at this point. It's relevant at the beginning of the flow (if it's about the customer experience in general) or in the product page.
- 4

Although product details are very limited here, the filters and the price and the names on the items are enough for them to take an action on them.
They expect a comparison table to have more details to compare in between products.

User Testing

I recruited the targeted users and tested my Axure prototype with them

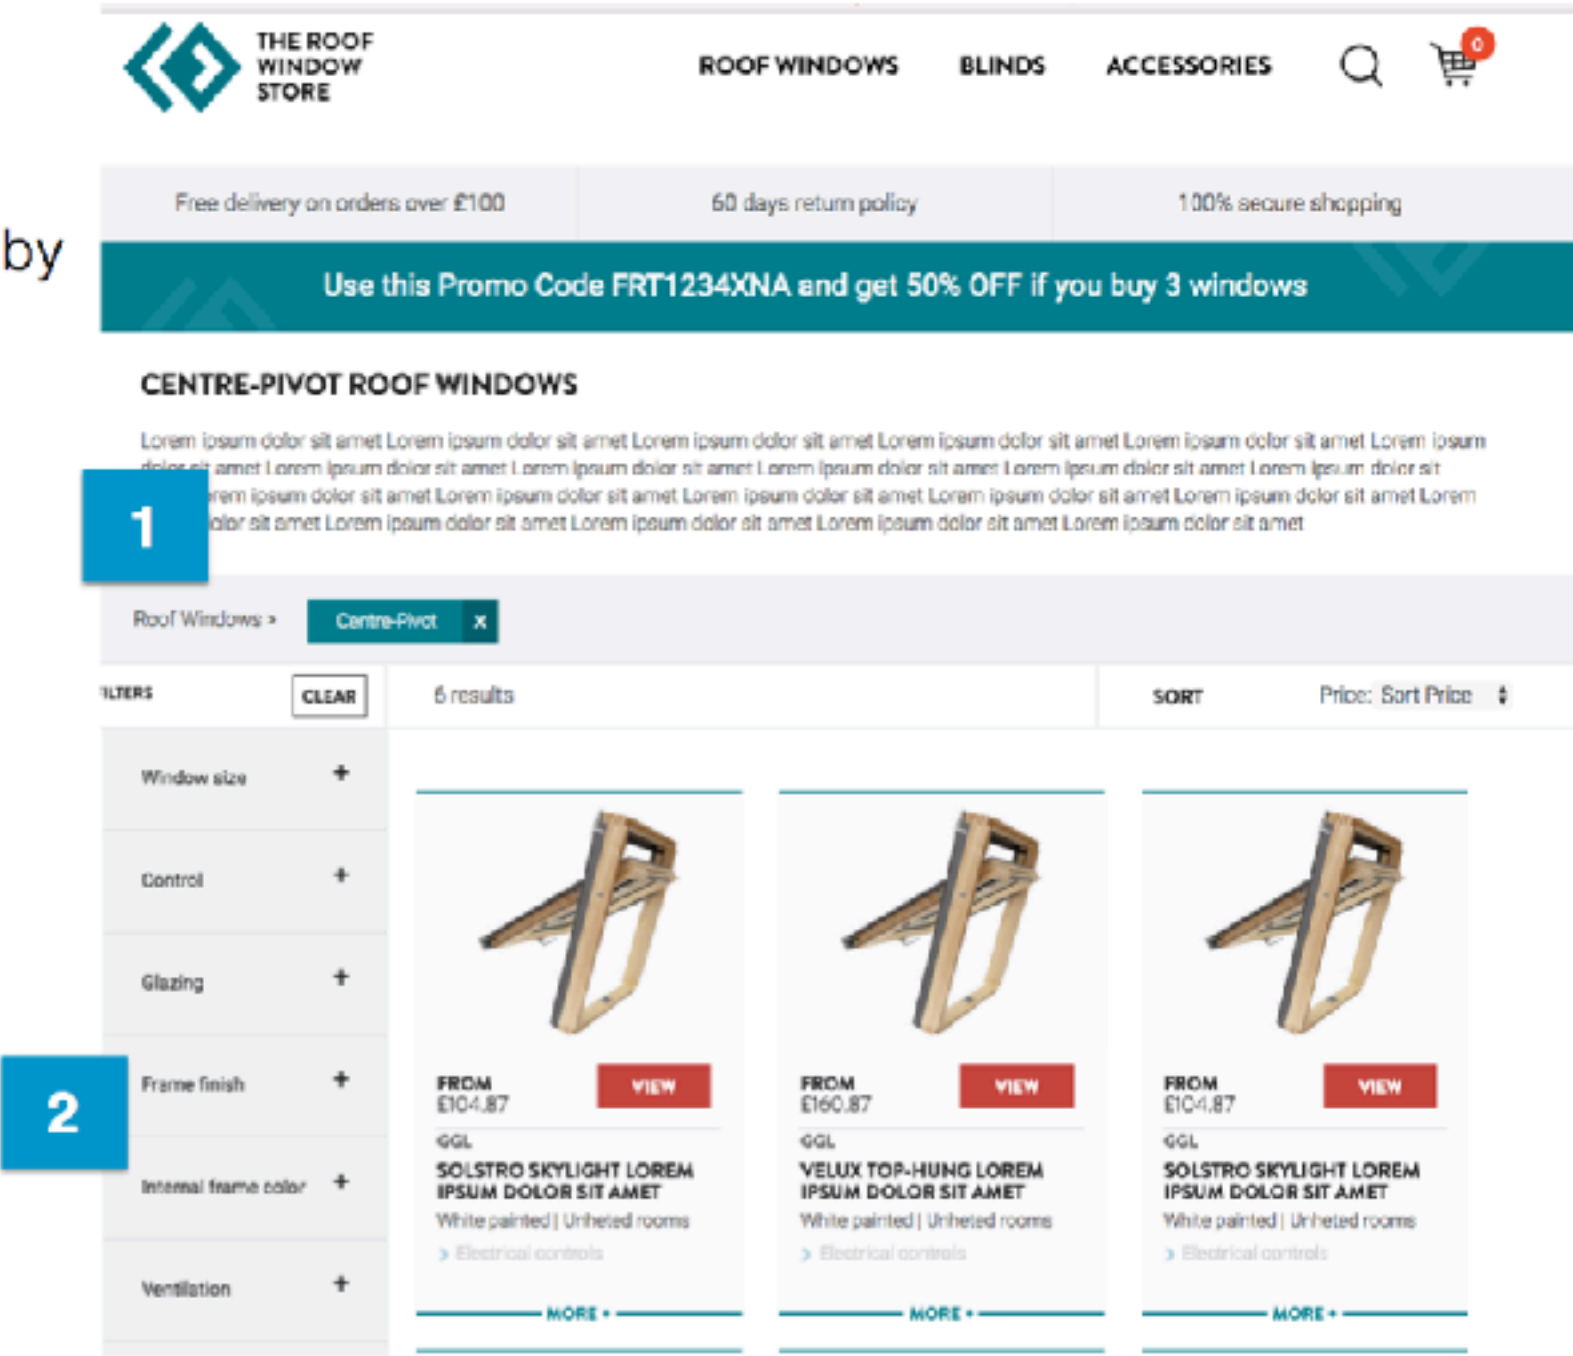

Listing Page

This page performed very well. The users understood the functionalities in it and knew how to use it. There is only one concern around a possible distraction given by the text below the promo banner.

- 1

Some of the users had to actively search for the filters. This is probably due to the text above the filter section that create a distraction. It is not a blocker, but something to consider when crafting the text.
- 2

Filters labels are clear and users know what they refer to.

Audit of the Build

When the dev team had a prototype built, I reviewed it and advised for amends before the launch

About me

User centred design is my bread and butter and I am really fascinated by the human mind. I like experimenting with new methods and techniques to convey information in the most appealing way. In doing so, I create new forms of dialogues to craft the most engaging experiences.

Working in many different environments and countries, I have learnt to adapt without losing sight of my true north.

Among all my duties, I am responsible for the User Experience Design, from brief to execution. I gained a wealth of experience with requirements gathering, running workshops and user research, persona creation, information architecture, wire-framing and prototyping.
